

FOURTH EDITION

# Culture of Animal Cells

*A MANUAL OF BASIC TECHNIQUE*

**R. Ian Freshney**

# Contents

*Figures, xvii*  
*Color Plates, xxi*  
*Preface, xxiii*  
*Abbreviations, xxv*

## 1 Introduction, 1

**Background, 1**  
**Advantages of Tissue Culture, 4**  
Control of the Environment, 4  
Characterization and Homogeneity of Sample, 4  
Economy, Scale, and Mechanization, 4  
*In Vivo* Modeling, 5  
**Limitations, 5**  
Expertise, 5  
Quantity, 5  
Dedifferentiation and Selection, 5  
Origin of Cells, 5  
Instability, 6  
**Major Differences *In Vitro*, 6**  
**Types of Tissue Culture, 6**

## 2 Biology of Cultured Cells, 9

**The Culture Environment, 9**  
**Cell Adhesion, 9**  
Cell Adhesion Molecules, 10  
Cytoskeleton, 10  
**Cell Proliferation, 11**  
Cell Cycle, 11

Control of Cell Proliferation, 11  
**Differentiation, 11**  
Maintenance of Differentiation, 12  
Dedifferentiation, 12  
**Energy Metabolism, 13**  
**Initiation of the Culture, 15**  
**Evolution of Cell Lines, 15**  
Senescence, 16  
**The Development of Continuous Cell Lines, 16**  
**Origin of Cultured Cells, 16**

## 3 Design and Layout, 19

**Planning, 19**  
**Construction and Services, 20**  
**Layout, 22**  
Sterile Handling Area, 23  
Incubation, 24  
Hot Room, 24  
Service Bench, 27  
Preparation, 27  
Wash-Up, 27  
Storage, 28

## 4 Equipment, 31

**Requirements of a Tissue Culture Laboratory**  
**Essential Equipment, 31**  
Laminar-Flow Hood, 31  
Incubator, 32

CO<sub>2</sub> Incubator, 34  
Sterilizer, 34  
Refrigerators and Freezers, 35  
Inverted Microscope, 37  
Washing Up, 37  
Sterilizing and Drying, 38  
Water Purification, 38  
Centrifuge, 39  
Cryostorage Container, 39  
Balance, 39  
Hemocytometer, 40

#### **Beneficial Equipment, 40**

Cell Counter, 40  
Aspiration Pump, 40  
pH Meter, 41  
Conductivity Meter, 41  
Osmometer, 41  
Upright Microscope, 41  
Dissecting Microscope, 41  
Temperature Recording, 41  
Magnetic Stirrer, 41  
Roller Racks, 41  
Fluid Handling, 42

#### **Useful Additional Equipment, 46**

Low-Temperature Freezer, 46  
Glassware Washing Machine, 46  
Video Camera and Monitor, 47  
Colony Counter, 48  
Controlled-Rate Freezer, 48  
Centrifugal Elutriator, 48  
Flow Cytometer, 48

#### **Consumable Items, 48**

Pipettes, 48  
Culture Vessels, 49  
Sterile Containers, 49  
Syringes and Needles, 49  
Sterilization Filters, 49

## **5 Aseptic Technique, 51**

#### **Objectives of Aseptic Technique, 51**

Maintaining Sterility, 51

#### **Elements of Aseptic Environment, 52**

Quiet Area, 52  
Work Surface, 52  
Personal Hygiene, 53  
Reagents and Media, 53  
Cultures, 54

#### **Sterile Handling, 55**

Swabbing, 55  
Capping, 55  
Flaming, 55  
Handling Bottles and Flasks, 55  
Pipetting, 56

Pouring, 56

#### **Laminar Flow, 56**

#### **Standard Procedure, 58**

Protocol 5.1. Working in Laminar Flow, 58  
Protocol 5.2. Working on the Open Bench, 60  
Petri Dishes and Multiwell Plates, 61  
Protocol 5.3. Handling Dishes or Plates, 62

#### **Apparatus and Equipment, 62**

Incubators, 62  
Boxed Cultures, 62  
Gassing with CO<sub>2</sub>, 62  
Training, 62

## **6 Safety, 65**

#### **Risk Assessment, 65**

Standard Operating Procedures, 65  
Safety Regulations, 68

#### **General Safety, 68**

Operator, 68  
Equipment, 68  
Glassware and Sharp Items, 68  
Chemical Toxicity, 70  
Gases, 71  
Liquid Nitrogen, 71

#### **Fire, 72**

#### **Radiation, 72**

Ingestion, 72  
Labeled Reagents, 72  
High-Energy Sources, 72

#### **Biohazards, 73**

Levels of Containment, 73  
Human Biopsy Material, 73  
Genetic Manipulation, 75  
Disposal, 76

## **7 Culture Vessels, 77**

#### **The Substrate, 77**

Attachment and Growth, 77  
Substrate Materials, 77

#### **Choice of Culture Vessel, 78**

Cell Yield, 78  
Suspension Culture, 80  
Venting, 80  
Sampling and Analysis, 81  
Uneven Growth, 82  
Cost, 82

#### **Specialized Systems, 83**

Permeable Supports, 83

#### **Treated Surfaces, 83**

Matrix Coating, 83  
Protocol 7.1. Preparation of ECM, 84

Feeder Layers, 85  
Three-dimensional Matrices, 85  
Alternative Artificial Substrates, 85  
Nonadhesive Substrates, 86  
Liquid-Gel or Liquid-Liquid Interfaces, 86

## 8 Media, 89

**Development of Media, 89**

**Physicochemical Properties, 89**

pH, 89

Protocol 8.1. Preparations of pH Standards, 90

CO<sub>2</sub> and Bicarbonate, 90

Buffering, 91

Oxygen, 91

Osmolality, 92

Temperature, 92

Viscosity, 93

Surface Tension and Foaming, 93

**Balanced Salt Solutions, 93**

**Complete Media, 94**

Amino Acids, 94

Vitamins, 95

Salts, 95

Glucose, 95

Organic Supplements, 95

Hormones and Growth Factors, 95

Antibiotics, 95

**Serum, 99**

Protein, 99

Growth Factors, 99

Hormones, 100

Nutrients and Metabolites, 101

Lipids, 101

Minerals, 101

Inhibitors, 101

**Selection of Medium and Serum, 101**

Batch Reservation, 103

Testing Serum, 103

Heat Inactivation, 103

**Other Supplements, 103**

Embryo Extract, 104

Conditioned Medium, 104

Subculture, 111

Hormones, 111

Growth Factors, 116

Nutrients in Serum, 116

Proteins and Polyamines, 116

Matrix, 116

**Selection of Serum-Free Medium, 116**

Commercially Available Serum-Free Media, 117

Serum Substitutes, 117

**Development of Serum-Free Medium, 117**

**Preparation of Serum-Free Medium, 120**

**Conclusions, 120**

## 10 Preparation and Sterilization, 121

**Apparatus, 121**

Glassware, 121

Protocol 10.1. Preparation and Sterilization of Glassware, 122

Pipettes, 125

Protocol 10.2. Preparation and Sterilization of Pipettes, 125

Screw Caps, 127

Protocol 10.3. Preparation and Sterilization of Screw Caps, 128

Selection of Detergent, 128

Miscellaneous Equipment, 129

Reusable Sterilizing Filters, 130

Protocol 10.4. Sterilizing Filter Assemblies, 130

**Reagents and Media, 130**

Water, 131

Balanced Salt Solutions, 132

Protocol 10.5. Preparation of BSS, 132

Media, 133

Protocol 10.6. Preparation of Medium from 1× Stock, 133

Protocol 10.7. Preparation of Medium from 10× Concentrate, 134

Powdered Media, 136

Protocol 10.8. Preparation of Medium from Powder, 136

Customized Medium, 137

Protocol 10.9. Preparation of Customized Medium, 137

Sterilization, 139

Sterile Filtration, 139

Protocol 10.10. Sterile Filtration with Syringe-tip Filter, 140

Protocol 10.11. Sterile Filtration with Filter Flask, 141

Protocol 10.12. Sterile Filtration with Small In-line Filter, 142

Protocol 10.13. Sterile Filtration with Large In-line Filter, 142

## 9 Serum-Free Media, 104

**Disadvantages of Serum, 105**

**Advantages of Serum-Free Media, 110**

Selective Media, 110

Regulation of Proliferation and Differentiation, 111

**Disadvantages of Serum-Free Media, 111**

**Replacement of Serum, 111**

- Serum, 143
- Protocol 10.14. Collection and Sterilization of Serum, 143
- Protocol 10.15. Serum Dialysis, 144
- Preparation and Sterilization of Other Reagents, 146
- Control, Testing, and Storage of Media, 146**
- Quality Control, 146
- Sterility Testing, 146
- Culture Testing, 146
- Storage, 147

## 11 Primary Culture, 149

### Types of Primary Cell Culture, 149

#### Isolation of the Tissue, 149

- Mouse Embryo Cell Culture, 150
- Protocol 11.1. Isolation of Mouse Embryos, 150
- Chick Embryo Cell Culture, 152
- Protocol 11.2. Isolation of Chick Embryos, 152
- Human Biopsy Material, 153
- Protocol 11.3. Human Biopsies, 157

#### Primary Culture, 157

- Primary Explant, 157
- Protocol 11.4. Primary Explants, 158
- Enzymatic Disaggregation, 159
- Protocol 11.5. Warm Trypsin, 161
- Trypsinization with Cold Preexposure, 163
- Protocol 11.6. Cold Trypsin, 163
- Chick Embryo Organ Rudiments, 165
- Protocol 11.7. Chick Embryo Organ Rudiments, 165
- Other Enzymatic Procedures, 169
- Collagenase, 169
- Protocol 11.8. Disaggregation in Collagenase, 169
- Mechanical Disaggregation, 171
- Protocol 11.9. Mechanical Disaggregation by Sieving, 173
- Separation of Viable and Nonviable Cells, 173
- Protocol 11.10. Enrichment of Viable Cells, 173
- Primary Records, 175

## 12 Cell Lines, 177

- Nomenclature, 177
- Subculture and Propagation, 177
- Immortalization of Cell Lines, 180
- Cell Line Designations, 180
- Selection of Cell Line, 181
- Routine Maintenance, 181
- Cell Morphology, 181
- Replacement of Medium, 181
- Volume, Depth, and Surface Area, 181

- Protocol 12.1. Changing the Medium or Feeding, 182
- Holding Medium, 183
- Subculture, 183
- Criteria for Subculture, 183
- Protocol 12.2. Subculture, 184
- Split Ratios and Growth Cycle, 188
- Cell Concentration at Subculture, 188
- Propagation in Suspension, 189
- Subculture of Suspension Culture, 189
- Protocol 12.3. Subculture in Suspension, 189
- Use of Antibiotics, 191
- Maintenance Records, 193

## 13 Cloning and Selection, 195

### Cloning, 195

- Protocol 13.1. Dilution Cloning, 196
- Stimulation of Plating Efficiency, 198
- Improving Clonal Growth, 198
- Conditioned Medium, 199
- Protocol 13.2. Preparation of Conditioned Medium, 199
- Feeder Layers, 199
- Protocol 13.3. Preparation of Feeder Layers, 200

### Suspension Cloning, 200

- Protocol 13.4. Cloning in Agar, 200
- Protocol 13.5. Cloning in Methocel, 202

### Isolation of Clones, 204

- Protocol 13.6. Isolation of Clones with Cloning Rings, 206
- Protocol 13.7. Isolating Cell Colonies by Irradiation, 206
- Other Isolation Techniques for Monolayer Clones, 206
- Suspension Clones, 206
- Protocol 13.8. Isolation of Suspension Clones, 206

### Replica Plating, 207

### Selective Inhibitors, 207

### Isolation of Genetic Variants, 208

- Protocol 13.9. Methotrexate Resistance and DHFR Amplification, 208

### Interaction with Substrate, 211

- Selective Adhesion, 211
- Selective Detachment, 211
- Nature of Substrate, 211
- Selective Feeder Layers, 212
- Semisolid Media, 213

## 14 Cell Separation, 215

### Cell Density and Isopyknic Sedimentation, 215

Protocol 14.1. Cell Separation by Density

Gradient, 215

Variations, 218

### Antibody-Based Techniques, 218

Immune Panning, 218

### Magnetic Sorting, 219

Protocol 14.2. Magnetic-Activated Cell Sorting

(MACS), 219

### Cell Size and Sedimentation Velocity, 222

### Centrifugal Elutriation, 222

### Fluorescence-Activated Cell Sorting, 223

### Other Techniques, 225

### Beginner's Approach to Cell Separation, 226

## 15 Characterization, 229

### The Need for Characterization, 229

Species Identification, 230

Lineage or Tissue Markers, 230

Unique Markers, 231

Transformation, 231

### Morphology, 231

Microscopy, 234

Protocol 15.1. Using an Inverted Microscope, 234

Staining, 234

Protocol 15.2. Staining with Giemsa, 235

Protocol 15.3. Staining with Crystal Violet, 236

Culture Vessels for Cytology: Monolayer

Cultures, 236

Preparation of Suspension Cultures for

Cytology, 236

Protocol 15.4. Smear Preparation, 236

Protocol 15.5. Cytocentrifuge, 236

Protocol 15.6. Filtration Cytology, 238

Photography, 239

Protocol 15.7. Microscope Photography on

Film, 239

Electronic Image Recording, 240

Protocol 15.8. Electronic Images from

Microscope, 241

### Chromosome Analysis, 241

Protocol 15.9. Chromosome Preparations, 242

Chromosome Banding, 242

Chromosome Analysis, 243

Chromosome Painting, 245

### DNA Content, 245

DNA Hybridization, 246

DNA Fingerprinting, 246

Protocol 15.10. Multilocus DNA Fingerprinting of

Cell Lines, 247

### RNA and Protein, 249

### Enzyme Activity, 251

Isoenzymes, 251

Protocol 15.11. Isoenzyme Analysis, 252

### Antigenic Markers, 254

Protocol 15.12. Indirect Immunofluorescence, 256

### Differentiation, 257

### Authentication, 257

## 16 Differentiation, 259

### Expression of *In Vivo* Phenotype, 259

Dedifferentiation, 259

### Stages of Commitment and Differentiation, 259

### Proliferation and Differentiation, 260

### Commitment and Lineage, 260

### Markers of Differentiation, 261

### Induction of Differentiation, 262

Soluble Inducers, 262

Cell Interaction, 262

Paracrine Growth Factors, 264

Negatively Acting Paracrine Factors, 265

Cell-Matrix Interactions, 265

Polarity and Cell Shape, 266

### Differentiation and Malignancy, 266

### Practical Aspects, 266

## 17 Transformation, 269

### Role in Cell Line Characterization, 269

### What is Transformation?, 269

### Genetic Instability, 269

Chromosomal Aberrations, 271

DNA Content, 271

### Immortalization, 271

Control of Senescence, 272

Immortalization with Viral Genes, 273

Immortalization of Human Fibroblasts, 274

Protocol 17.1. Fibroblast Immortalization, 274

Telomerase-induced Immortalization, 277

Transgenic Mouse, 277

### Aberrant Growth Control, 277

Anchorage Independence, 277

Contact Inhibition, 278

Protocol 17.2. Density Limitation of Cell

Proliferation, 279

Serum Dependence, 279

### Tumorigenicity, 280

Malignancy, 280

Tumorigenesis, 281

Invasiveness, 281

Angiogenesis, 282

Plasminogen Activator, 283

# 18 Contamination, 285

## Sources of Contamination, 285

Operator Technique, 285

Environment, 285

Use and Maintenance of Laminar-flow Hood

Humid Incubators, 288

Protocol 18.1. Cleaning Incubators, 288

Cold Stores, 289

Sterile Materials, 289

Imported Cell Lines and Biopsies, 289

Quarantine, 289

## Types of Microbial Contamination, 289

### Monitoring for Contamination, 289

Visible Microbial Contamination, 289

Mycoplasma, 290

Protocol 18.2. Fluorescence Detection of

Mycoplasma, 292

Viral Contamination, 294

### Eradication of Contamination, 294

Bacteria, Fungi, and Yeasts, 294

Protocol 18.3. Eradication of Microbial

Contamination, 294

Eradication of Mycoplasma, 294

Eradication of Viral Contamination, 295

Persistent Contamination, 295

### Cross-Contamination, 295

### Conclusions, 296

# 19 Cryopreservation, 297

## Need for Cryopreservation, 297

Rationale for Freezing, 297

## Preservation, 297

Selection of Cell Line, 297

Standardization of Culture Conditions, 297

Stages of Cryopreservation, 298

Protocol 19.1. Freezing Cells, 299

Cooling Rate, 302

Cryofreezers, 302

Freezer Records, 303

Protocol 19.2. Thawing Frozen Cells, 303

Serial Replacement, 307

## Cell Banks, 307

## Transporting Cells, 308

Frozen Ampules, 308

Living Cultures, 308

# 20 Quantitation, 309

## Cell Counting, 309

Hemocytometer, 309

Protocol 20.1. Cell Counting by

Hemocytometer, 309

Electronic Counting, 312

Protocol 20.2. Electronic Cell Counting, 312

Cell Sizing, 313

Stained Monolayers, 313

## Cell Weight, 314

## DNA Content, 314

Protocol 20.3. DNA Estimation by Hoechst

33258, 314

## Protein, 314

Solubilization of Sample, 315

Protocol 20.4. Protein Estimation by Bradford

Method, 315

## Rates of Synthesis, 315

DNA Synthesis, 315

Protocol 20.5. DNA Synthesis, 315

Protein Synthesis, 316

Protocol 20.6. Protein Synthesis, 316

## Preparation of Samples for Enzyme Assay and

Immunoassay, 317

## Cytometry, 317

*In situ* Labeling, 317

Flow Cytometry, 318

## Replicate Sampling, 318

Data Acquisition, 318

Data Analysis, 318

## Cell Proliferation, 319

Experimental Design, 319

Growth Cycle, 319

Protocol 20.7. Growth Curve, Monolayer, 319

Suspension Cultures, 321

Protocol 20.8. Growth Curve, Suspension, 321

Analysis of the Growth Cycle, 322

## Plating Efficiency, 323

Protocol 20.9. Plating Efficiency, 324

Automatic Colony Counting, 325

## Labeling Index, 325

Protocol 20.10. Labeling Index with [<sup>3</sup>H]-

thymidine, 325

Growth Fraction, 327

Protocol 20.11. Determination of Growth

Fraction, 327

Mitotic Index, 327

Division Index, 327

## Cell Cycle Time (Generation Time), 327

## Cell Migration, 328

# 21 Cytotoxicity, 329

## Introduction, 329

## *In Vitro* Limitations, 330

## Nature of the Assay, 330

Viability, 330

Protocol 21.1. Estimation of Viability by Dye

Exclusion, 331

- Protocol 21.2. Estimation of Viability by Dye Uptake, 331
- Survival, 332
  - Protocol 21.3. Clonogenic Assay, 332
- Cell Proliferation Assays, 335
- Metabolic Assays, 335
- Microtitration Assays, 335
  - Protocol 21.4. MTT-Based Cytotoxicity Assay, 336
- Comparison of Microtitration with Cloning, 338
- Drug Interaction, 340
- Anticancer Drug Screening, 340**
  - Predictive Testing, 340
- Transformation, 340**
  - Protocol 21.5. Sister Chromatid Exchange, 341
- Carcinogenicity, 343
- Inflammation, 343**

## 22 Specialized Cells, 345

- Epithelial Cells, 345**
  - Epidermis, 346
    - Protocol 22.1. Epidermal Keratinocytes, 347
  - Cornea, 349
    - Protocol 22.2. Corneal Epithelial Cells, 350
  - Breast, 351
    - Protocol 22.3. Mammary Epithelium, 351
  - Cervix, 352
    - Protocol 22.4. Cervical Epithelium, 352
  - Gastrointestinal Tract, 355
    - Protocol 22.5. Colorectal Epithelium, 355
  - Liver, 357
    - Protocol 22.6. Isolation of Rat Hepatocytes, 357
  - Pancreas, 358
    - Protocol 22.7. Pancreatic Epithelium, 358
  - Kidney, 359
    - Protocol 22.8. Kidney Epithelium, 360
  - Bronchial and Tracheal Epithelium, 361
    - Protocol 22.9. Bronchial and Tracheal Epithelium, 361
  - Prostate, 362
    - Protocol 22.10. Prostatic Epithelium, 362
- Mesenchymal Cells, 364**
  - Connective Tissue, 364
  - Adipose Tissue, 364
    - Protocol 22.11. Primary Culture of Adipose Cells, 365
  - Muscle, 366
    - Protocol 22.12. Skeletal Muscle, 366
  - Cartilage, 367
    - Protocol 22.13. Chondrocytes in Alginate Beads, 368
  - Bone, 370
    - Protocol 22.14. Osteoblasts, 370
  - Endothelium, 372

- Protocol 22.15. Vascular Endothelial Cells, 372
- Neuroectodermal Cells, 373**
  - Neurons, 373
    - Protocol 22.16. Cerebellar Granule Cells, 373
  - Glial Cells, 374
    - Protocol 22.17. Olfactory Bulb Ensheathing Cells, 376
  - Endocrine Cells, 378
  - Melanocytes, 378
    - Protocol 22.18. Melanocytes, 378
- Hematopoietic Cells, 380**
  - Long-Term Bone Marrow Cultures, 381
    - Protocol 22.19. Long-term Hematopoietic Cell Cultures from Bone Marrow, 381
  - Hematopoietic Colony-Forming Assays, 382
    - Protocol 22.20. Hematopoietic Colony-forming Assays, 382
- Gonads, 384**
  - Germ Cells, 384

## 23 Tumor Cells, 385

- Sampling, 386**
- Disaggregation, 387**
- Primary Culture, 387**
- Characterization, 387**
- Development of Cell Lines, 388**
  - Continuous Cell Lines, 388
- Selective Culture, 388**
  - Selective Media, 389
  - Confluent Feeder Layers, 389
    - Protocol 23.1. Growth on Confluent Feeder Layers, 390
  - Suspension Cloning, 391
  - Histotypic Culture, 391
  - Spheroids, 391
  - Xenografts, 391
  - Preservation of Tissue by Freezing, 391
    - Protocol 23.2. Freezing Biopsies, 391
- Specific Tumor Types, 392**
  - Breast, 392
  - Lung, 392
  - Colon, 392
  - Pancreas, 392
  - Ovary, 392
  - Prostate, 393
  - Skin, 393
  - Cervix, 393
  - Neuroblastoma, 393
  - Seminoma, 393

## 24 Organotypic Culture, 395

### Cell Interaction and Phenotypic Expression, 395

Reciprocal Interactions, 395  
Choice of Models, 396

### Organ Culture, 396

Gas and Nutrient Exchange, 396  
Structural Integrity, 396  
Growth and Differentiation, 397  
Limitations of Organ Culture, 397  
Types of Organ Culture, 397  
Protocol 24.1. Organ Culture, 397

### Histotypic Culture, 399

Gel and Sponge Techniques, 399  
Hollow Fibers, 399  
Spheroids, 399  
Protocol 24.2. Spheroids, 400  
Immobilization of Living Cells in Alginate, 402  
Protocol 24.3. Alginate Encapsulation, 402

### Filter-Well Inserts, 403

Protocol 24.4. Filter-Well Inserts, 404  
Cultures of Neuronal Aggregates, 405  
Protocol 24.5. Neuronal Aggregates, 405z  
Organotypic Culture, 406

## 25 Scale-Up, 407

### Scale-up Suspension, 407

Protocol 25.1. Stirred 4-liter Batch Suspension Culture, 407

Continuous Culture, 409  
Scale and Complexity, 410  
Mixing and Aeration, 410

### Scale-up Monolayer, 000

Multisurface Propagators, 412  
Protocol 25.2. Nunclon Cell Factory, 413  
Multiarray Disks, Spirals, and Tubes, 414  
Roller Culture, 414  
Protocol 25.3. Roller Bottle Culture, 414  
Microcarriers, 416  
Protocol 25.4. Microcarriers, 417  
Perfused Monolayer Culture, 419  
Monitoring Growth, 420

## 26 Specialized Techniques, 423

### Lymphocyte Preparation, 423

Protocol 26.1. Preparation of Lymphocytes, 423  
Blast Transformation, 424  
Protocol 26.2. PHA Stimulation of Lymphocytes, 424

### Autoradiography, 424

Protocol 26.3. Microautoradiography, 425

### Time-Lapse Recording, 429

Protocol 26.4. Time-Lapse Video, 430

### Confocal Microscopy, 431

### Cell Synchrony, 431

Cell Separation, 431  
Blockade, 431

### Culture of Amniocytes, 432

Protocol 26.5. Culture of Amniocytes, 432

### Culture of Cells from Poikilotherms, 437

Fish Cells, 437  
Reagents and Media for Protocols 26.6-26.8, 438  
Protocol 26.6. Fibroblast Feeder Layers from Zebrafish Embryos, 439  
Protocol 26.7. Primary Cultures from Zebrafish Embryos, 439  
Protocol 26.8. Cell Lines from Zebrafish Embryos, 440  
Insect Cells, 440  
Protocol 26.9. Propagation of Insect Cells, 440

## 27 Molecular Techniques, 443

### Molecular Biology in Cell Culture, 443

### *In Situ* Molecular Hybridization, 443

Analysis of RNA Gene Expression by *in Situ* Hybridization, 443  
Protocol 27.1. Autoradiographic *in Situ* Hybridization, 443

Fluorescence *In Situ* Hybridization in the Analysis of Genes and Chromosomes, 447

Protocol 27.2. FISH Using Single-Copy Genomic Probes and Chromosome Painting, 447

### Somatic Cell Fusion, 449

Protocol 27.3. Cell Hybridization, 449  
Selection of Hybrid Clones, 451  
Nuclear Transfer, 451  
Monochromosomal Transfer, 451

### Production of Monoclonal Antibodies, 452

Protocol 27.4. Production of Monoclonal Antibodies, 452

### DNA Transfer, 455

Coprecipitation with Calcium Phosphate, 456  
Protocol 27.5. Stable DNA Transfection with Calcium Phosphate, 456

Lipofection, 457

Protocol 27.6. Transient Transfection by Lipofection, 457

Electroporation, 458

Protocol 27.7. Stable Transfection by Electroporation, 459

Other DNA Transfer Methods, 460

Reporter Genes, 460

Protocol 27.8. *In Situ* Staining for  $\beta$ -galactosidase, 461

Protocol 27.9. Chloramphenicol Acetyltransferase  
(CAT) Assay, 461

## 28 Problem Solving, 463

### Slow Cell Growth, 463

Is the problem restricted to your own stocks or are other people having similar problems?, 463

If the problem is more general and other researchers are having difficulty as well, check shared facilities and reagents, 464

Have any changes occurred in the laboratory?, 464  
Medium, 464

### Choice of Medium, 465

Selection of the correct medium is critical, 465

### Unstable Reagents, 466

Glutamine, 466

Serum, 466

Other Constituents, 466

Trypsin, 466

### Purity of Constituents, 466

### Plastics, 466

### Glassware, 466

Wash-Up, 466

### Contamination, 467

Single User, 467

Widespread, 467

Identification of Contamination, 468

Chemical Contamination, 469

### Primary Culture, 469

Poor Take in Primary Culture, 469

Wrong Cells, 470

Contamination, 470

### Cloning, 470

Poor Plating Efficiency, 470

Diffuse Colonies, 471

Too Many Colonies per Dish, 471

Nonrandom Distribution, 471

Nonadherent Cells, 471

### Differentiation, 471

Cells Do Not

Differentiate, 471

Loss of Product Formation, 471

### Feeding, 471

Clones, 471

### Subculture, 471

Cell Cycle Phase at Subculture, 472

Senescence, 472

Medium, 472

Uneven Growth, 472

### Cross-Contamination, 472

Symptoms, 472

Prophylaxis, 472

Cure, 472

### Cryopreservation, 472

Poor Recovery, 472

Changed Appearance After Cryopreservation, 473

Contamination, 473

Loss of Stock, 473

### Cell Counting, 473

Hemocytometer, 473

Electronic, 473

### Viability, 474

Morphological Appearance, 474

Testing Viability, 474

Cytotoxicity, 474

## In Conclusion, 475

### Reagent Appendix, 477

### Trade Index, 483

Sources of Materials, 483

Suppliers and Other Resources, 488

### Glossary, 517

### References, 523

General Textbooks, 561

Useful Journals, 563

### Index, 565
