

BILLMEYER AND SALTZMAN'S

PRINCIPLES OF

COLOR

TECHNOLOGY

THIRD EDITION

ROY S. BERNIS

Contents

Preface to the Third Edition, xi

Preface to Second Edition, xiii

Chapter 1 Defining Color 1

- A. What This Book Is About, 1
- B. The Physical Stimulus, 2
 - Sources of Light, 3
 - How Materials Modify Light, 7
 - Transmission, 7*
 - Absorption, 8*
 - Scattering, 8*
 - Fluorescence, 10*
 - Spectral Characteristics of Materials, 10*
 - Goniophotometric and Goniochromatic Aspects, 12*
- C. Perceiving Color, 13
- D. Describing Color, 20
 - Organizing Colors—The Desert Island Experiment, 20
 - Color Coordinates, 22
 - Factors Affecting Color Descriptions—The Art Classroom Experiment, 23
 - Color Appearance, 26
- E. Metamerism, 27
- F. Summary, 29

Chapter 2 Describing Color 31

- A. Systems Based on Color Mixing, 31
- B. Systems Based on Color Perception, 35
 - The Munsell Color System, 36

- The Natural Color System, 39
- The OSA Uniform Color Scales System, 42
- The Colorcurve System, 42
- Other Systems, 44

- C. Systems Based on Color Matching: The CIE System, 44
 - Derivation of the Standard Observers, 45
 - Theoretical Considerations, 45*
 - The Color-Matching Experiment, 47*
 - The 1924 CIE Standard Photopic Observer, 49*
 - The 1931 CIE Standard Observer, 50*
 - The 1964 CIE Standard Observer, 53*
 - The CIE Standard Deviate Observer, 54*
 - Calculating Tristimulus Values for Materials, 56
 - Chromaticity Coordinates and the Chromaticity Diagram, 59
 - Calculating Tristimulus Values and Chromaticity Coordinates for Sources, 62
- D. More Nearly Uniformly Spaced Systems, 63
 - Uniform-Chromaticity Scale Diagrams, 64
 - Lightness Scales, 65
 - Opponent-Type Systems, 66
 - One-Dimensional Color Scales, 69
 - Yellowness Scales, 70*
 - Whiteness Scales, 70*
 - Color Differences, 71
- E. Summary, 74

Chapter 3 Measuring Color 75

- A. Basic Principles of Measuring Color, 76
- B. The Sample, 78

- Samples for Analysis, 77
- Form Suitable for Inspection, 77
- C. Visual Color Measurement, 78
 - Standardized Illuminating and Viewing Conditions, 78
 - Measuring Color Appearance, 80
 - Measuring Color Equality, 81
 - Sample and Single Standard, 81*
 - Sample and Multiple Standards, 81*
 - Defining Limit Standards, 82*
- D. Instrumental Color Measurement, 82
 - Measurement Geometries, 83
 - CIE Standard Geometries—Reflectance, 84*
 - Choosing a CIE Geometry—Reflectance, 85*
 - CIE Standard Geometries—Transmittance, 87*
 - Multiangle Geometries, 87*
 - Spectrophotometers, 88
 - Colorimeters, 91
 - Other Measurement Devices, 92
 - Spectroradiometers, 92*
 - Photometers, 92*
 - Abridged Spectrometers, 92*
 - Imaging Systems, 93*
 - Goniophotometers, Glossmeters, and so on, 93*
 - Selecting a Color-Measuring Instrument, 94
- E. Precision and Accuracy Measurements, 95
 - Calibration and Verification, 95
 - Evaluating Precision, 96
 - Evaluating Accuracy, 101
 - The Importance of High Precision and Accuracy, 102
 - Instruments That Measure Sources, 102

F. Summary, 104

Chapter 4 Measuring Color Quality 107

- A. Perceptibility and Acceptability Visual Judgments, 107
- B. Historical Perspective, 108
 - Equations Based on Munsell Data, 108
 - Equations Based on Matching Colored Lights, 109
 - Equations Based on Evaluating Colored Materials 109
- C. The Color-Difference Problem, 112
 - Comparing Datasets, 113
 - Observer Variability, 113
 - Progress by the CIE, 114

- D. Recent Comprehensive Color-Difference Research, 115
 - Weighted Color-Difference Equations, 115
 - CMC (*l:c*) Color-Difference Equation, 117
 - Luo–Rigg Dataset and the BFD Equation, 118
 - RIT–DuPont Dataset, 119
 - CIE94, 120
 - Recent CIE Color-Difference Activities, 121
- E. The “Color Tolerance” Experiment, 122
- F. Other Quality Metrics, 126
 - Metamerism Indices, 126
 - Color Inconstancy Index, 128

G. Summary, 130

Chapter 5 Colorants 131

- A. Some Matters of Terminology, 131
- B. Dyes Versus Pigments, 131
 - Solubility, 132
 - Chemical Nature, 132
 - Transparency, 132
 - Presence of a Binder, 133
 - Summary, 133
- C. Classification of Colorants, 133
 - The *Colour Index International*, 133
 - Special Colorants—Fluorescents and Flakes, 136
 - Fluorescent Colorants, 136*
 - Metallic Flakes, 138*
 - Pearlescent and Interference Flakes, 138*
 - Photochromatic and Thermochromic Colorants, 139*
- D. Selecting the Colorants to Use, 139
 - Sources of Information, 139
 - Experienced Personnel, 139*
 - Suppliers of Colorants, 139*
 - Books and Periodicals, 141*
 - The User’s Experience, 142*
 - General Principles in Choosing Colorants, 142
- E. Color as an Engineering Material, 142
 - The Various Meanings of Color, 142
 - Engineering Properties of Colorants, 143
 - Color Gamuts, 143
 - The Selection of Colorants, 146
- F. Summary, 148

Chapter 6 Producing Colors 149

- A. Color Modeling, 149
- B. Color-Mixing Laws, 151
 - Additive Versus Subtractive Mixing, 151
 - Finding the Appropriate Mixing Law, 155
 - Simple-Subtractive Mixing, 157
 - Complex-Subtractive Mixing, 161
 - Additive Mixing, 165
 - Color CRT Displays, 165*
 - Color Printing, 170*
- C. The “Visual-Based Color-Matching” Experiment, 174
- D. Instrumental-Based Color Matching, 176
 - Database Development, 177
 - Spectrophotometric Colorant Identification, 179
 - Spectral-Matching Algorithms, 181
 - Colorimetric-Matching Algorithms, 183
 - Batch Correction, 185
 - Other Features, 186
 - Strength of Colorants, 186*
 - Recipe Sensitivity Evaluation, 188*
 - Shade Sorting, Clustering, and Tapering, 188*
 - Those Other Aspects Affecting Appearance, 189
- E. Color Matching of Images and Graphics, 189
 - Color-Matching Objectives, 190

“Device-Independent” Color Encoding, 192
Color Management Systems, 194

F. Summary, 197

Chapter 7 Back to Principles 199

Appendix Mathematics of Color Technology 201

- A. Matrix Algebra, 201
- B. Colorimetry, 203
- C. Transformation of Primaries, 205
- D. Television and Display Colorimetry, 206
- E. Instrumental-Based Color Matching, 208
- F. Indices of Metamerism and Color Inconstancy, 211
- G. Color Management, 215

Bibliography 225
