

MOLECULAR EPIDEMIOLOGY OF INFECTIOUS DISEASES

R.C.A. THOMPSON

Contents

	Contributors	vi
	Preface	ix
1	Molecular epidemiology: applications to problems of infectious disease RC Andrew Thompson	1
2	Molecular tools in epidemiological investigations David M Groth and JD Wetherall	5
3	Molecular epidemiology and evolutionary genetics of pathogenic microorganisms: analysis and interpretation of data Michel Tibayrenc and Francisco J Ayala	20
4	Diagnosis Una M Morgan	30
5	Population genetics David J Conway	45
6	Within-host ecology of infectious diseases: patterns and consequences Andrew F Read and Louise H Taylor	59
7	Mathematical modeling Sunetra Gupta	76
8	Malaria David Walliker	93
9	Molecular epidemiology of tuberculosis Marcos V Burgos and Peter M Small	114
10	Nosocomial epidemiology of microbial infections: molecular tracking of genes and genomes Alex van Belkum and Peter WM Hermans	126
11	HIV/AIDS Francine E McCutchan	143
12	Measles Jennifer S Rota, William J Bellini and Paul A Rota	168
13	The ecology and evolution of human hepatitis viruses Edward C Holmes and Paolo M de A Zanotto	181
14	Enteric protozoan infections RC Andrew Thompson, Una M Morgan, RM Hopkins and LJ Pallant	194
15	Pneumocystis infection Melanie T Cushion	210

16	Population genetics of human-pathogenic fungi Austin Burt, Vassiliki Koufopanou and John W Taylor	229
17	Rabies and rabies-related viruses Susan A Nadin-Davis	245
18	Trypanosomiases Andrew Tait	258
19	Insect disease vectors Tovi Lehmann and C Ben Beard	283
20	Molecular epidemiology and phylogeny of Australian arboviruses John S Mackenzie, Roy A Hall, Michael D Lindsay, Helle Bielefeldt-Ohmann and Michael Poidinger	297
