Waterworks for drinking water

# WATER DISTRIBUTION SYSTEMS HANDBOOK

LARRY W. MAYS

# CONTENTS

Contributors .....	xxv
Preface .....	xxvii
Acknowledgments .....	xxix

## CHAPTER 1 INTRODUCTION

1.1 BACKGROUND .....	1.1
1.2 HISTORICAL ASPECTS OF WATER DISTRIBUTION .....	1.3
1.2.1 Ancient Urban Water Supplies .....	1.3
1.2.2 Status of Water Distribution Systems in the 19th Century .....	1.9
1.2.3 Perspectives on Water Distribution Mains in the United States .....	1.10
1.2.4 Early Pipe Flow Computational Methods .....	1.16
1.3 MODERN WATER DISTRIBUTION SYSTEMS .....	1.16
1.3.1 The Overall Systems .....	1.16
1.3.2 System Components .....	1.20
1.3.3 System Operation .....	1.26
1.3.4 The Future .....	1.29
REFERENCES .....	1.30

## CHAPTER 2 HYDRAULICS OF PRESSURIZED FLOW

2.1 INTRODUCTION .....	2.1
2.2 IMPORTANCE OF PIPELINE SYSTEMS .....	2.2
2.3 NUMERICAL MODELS: BASIS FOR PIPELINE ANALYSIS .....	2.3
2.4 MODELING APPROACH .....	2.4
2.4.1 Properties of Matter (What?) .....	2.5
2.4.2 Laws of Conservation (How?) .....	2.6
2.4.3 Conservation of Mass .....	2.7
2.4.3.1 Law of conservation of chemical species. ....	2.7
2.4.3.2 Steady flow .....	2.8
2.4.4 Newton's Second Law .....	2.9
2.5 SYSTEM CAPACITY: PROBLEMS IN TIME AND SPACE .....	2.10
2.6 STEADY FLOW .....	2.13
2.6.1 Turbulent Flow .....	2.15
2.6.2 Headloss Caused by Friction .....	2.16
2.6.3 Comparison of Loss Relations .....	2.18
2.6.4 Local Losses .....	2.21
2.6.5 Tractive Force .....	2.22
2.6.6 Conveyance System Calculations: Steady Uniform Flow .....	2.23
2.6.7 Pumps: Adding Energy to the Flow .....	2.26
2.6.8 Sample Application Including Pumps .....	2.28
2.6.9 Networks—Linking Demand and Supply .....	2.30
2.7 QUASI-STEADY FLOW: SYSTEM OPERATION .....	2.30

<b>2.8 UNSTEADY FLOW: INTRODUCTION OF FLUID TRANSIENTS</b>	2.32
2.8.1 Importance of Waterhammer	2.32
2.8.2 Cause of Transients	2.34
2.8.3 Physical Nature of Transient Flow	2.35
2.8.3.1 Implication 1. Water has a high density	2.35
2.8.3.2 Implication 2. Water is only slightly compressible	2.35
2.8.3.3 Implication 3. Local action and control of valves	2.36
2.8.4 Equation of State-Wavespeed Relations	2.37
2.8.5 Increment of Head-Change Relation	2.38
2.8.6 Transient Conditions in Valves	2.39
2.8.6.1 Gate discharge equation	2.40
2.8.6.2 Alternate valve representation	2.41
2.8.6.3 Pressure regulating valves	2.42
2.8.7 Conclusion	2.42
<b>REFERENCES</b>	2.42

## CHAPTER 3 SYSTEM DESIGN: AN OVERVIEW

<b>3.1 INTRODUCTION</b>	3.1
3.1.1 Overview	3.1
3.1.2 Definitions	3.2
<b>3.2 DISTRIBUTION SYSTEM PLANNING</b>	3.2
3.2.1 Water Demands	3.2
3.2.2 Planning and Design Criteria	3.7
3.2.2.1 Supply	3.7
3.2.2.2 Storage	3.7
3.2.2.3 Fire demands	3.8
3.2.2.4 Distribution system analysis	3.8
3.2.2.5 Service pressures	3.8
3.2.3 Peaking Coefficients	3.9
3.2.4 Computer Models and System Modeling	3.9
3.2.4.1 History of computer models	3.10
3.2.4.2 Software packages	3.10
3.2.4.3 Development of a system model	3.11
<b>3.3 PIPELINE PRELIMINARY DESIGN</b>	3.11
3.3.1 Alignment	3.11
3.3.2 Subsurface Conflicts	3.13
3.3.3 Rights-of-Way	3.13
<b>3.4 PIPING MATERIALS</b>	3.13
3.4.1 Ductile Iron Pipe (DIP)	3.14
3.4.1.1 Materials	3.14
3.4.1.2 Available sizes and thicknesses	3.14
3.4.1.3 Joints	3.14
3.4.1.4 Gaskets	3.14
3.4.1.5 Fittings	3.14
3.4.1.6 Linings	3.16
3.4.1.7 Coatings	3.17
3.4.2 Polyvinyl Chloride (PVC) Pipe	3.18
3.4.2.1 Materials	3.18
3.4.2.2 Available sizes and thicknesses	3.19
3.4.2.3 Joints	3.19

3.4.2.4 Gaskets . . . . .	3.20
3.4.2.5 Fittings . . . . .	3.20
3.4.2.6 Linings and Coatings . . . . .	3.20
<b>3.4.3 Steel Pipe . . . . .</b>	<b>3.21</b>
3.4.3.1 Materials . . . . .	3.21
3.4.3.2 Available sizes and thicknesses . . . . .	3.21
3.4.3.3 Joints . . . . .	3.22
3.4.3.4 Gaskets . . . . .	3.22
3.4.3.5 Fittings . . . . .	3.22
3.4.3.6 Linings and Coatings . . . . .	3.23
<b>3.4.4 Reinforced Concrete Pressure Pipe (RCPP) . . . . .</b>	<b>3.25</b>
3.4.4.1 Steel cylinder pipe, AWWA C300 . . . . .	3.26
3.4.4.2 Prestressed steel cylinder pipe, AWWA C301 . . . . .	3.26
3.4.4.3 Noncylinder pipe, AWWA C302 . . . . .	3.28
3.4.4.4 Pretensioned steel cylinder, AWWA C300 . . . . .	3.28
<b>3.4.5 High-Density Polyethylene (HDPE) Pipe . . . . .</b>	<b>3.29</b>
3.4.5.1 Materials . . . . .	3.29
3.4.5.2 Available sizes and thicknesses . . . . .	3.30
3.4.5.3 Joints . . . . .	3.30
3.4.5.4 Gaskets . . . . .	3.31
3.4.5.5 Fittings . . . . .	3.31
3.4.5.6 Linings and coatings . . . . .	3.31
<b>3.4.6 Asbestos-Cement Pipe (ACP) . . . . .</b>	<b>3.31</b>
3.4.6.1 Available sizes and thicknesses . . . . .	3.31
3.4.6.2 Joints and fittings . . . . .	3.32
<b>3.4.7 Pipe Material Selection . . . . .</b>	<b>3.32</b>
<b>3.5 PIPELINE DESIGN . . . . .</b>	<b>3.34</b>
3.5.1 Internal Pressures . . . . .	3.34
3.5.2 Loads on Buried Pipe . . . . .	3.34
3.5.2.1 Earth loads . . . . .	3.35
3.5.2.2 Rigid pipe . . . . .	3.36
3.5.2.3 Flexible pipe . . . . .	3.37
3.5.3 Thrust Restraint . . . . .	3.38
3.5.3.1 Thrust blocks . . . . .	3.39
3.5.3.2 Restrained joints . . . . .	3.41
<b>3.6 DISTRIBUTION AND TRANSMISSION SYSTEM VALVES . . . . .</b>	<b>3.44</b>
3.6.1 Isolation Valves . . . . .	3.44
3.6.1.1 Gate valves . . . . .	3.45
3.6.1.2 Butterfly valves . . . . .	3.45
3.6.2 Control Valves . . . . .	3.46
3.6.2.1 Pressure-reducing valve . . . . .	3.46
3.6.2.2 Pressure-sustaining valves . . . . .	3.47
3.6.2.3 Flow-control valves . . . . .	3.47
3.6.2.4 Altitude valves . . . . .	3.47
3.6.2.5 Pressure-relief valves . . . . .	3.47
3.6.3 Blow-offs . . . . .	3.47
3.6.4 Air Release and Vacuum-Relief Valves . . . . .	3.48
<b>REFERENCES . . . . .</b>	<b>3.48</b>

## CHAPTER 4 HYDRAULICS OF WATER DISTRIBUTION SYSTEMS

<b>4.1 INTRODUCTION</b>	.....	4.1
4.1.1 Configuration and Components of Water Distribution Systems	.....	4.1
4.1.2 Conservation Equations for Pipe Systems	.....	4.3
4.1.3 Network Components	.....	4.3
<b>4.2 STEADY-STATE HYDRAULIC ANALYSIS</b>	.....	4.5
4.2.1 Series and Parallel Pipe Systems	.....	4.5
4.2.2 Branching Pipe Systems	.....	4.7
4.2.3 Pipe Networks	.....	4.11
4.2.3.1 Hardy Cross method	.....	4.11
4.2.3.2 Linear theory method	.....	4.17
4.2.3.3 Newton-Raphson method and the node equations	.....	4.18
4.2.3.4 Gradient algorithm	.....	4.20
4.2.3.5 Comparison of solution methods	.....	4.22
4.2.3.6 Extended-period simulation	.....	4.23
<b>4.3 UNSTEADY FLOW IN PIPE NETWORK ANALYSIS</b>	.....	4.23
4.3.1 Governing Equations	.....	4.24
4.3.2 Solution Methods	.....	4.24
4.3.2.1 Loop formulation	.....	4.25
4.3.2.2 Pipe formulation with gradient algorithm	.....	4.26
<b>4.4 COMPUTER MODELING OF WATER DISTRIBUTION SYSTEMS</b>	.....	4.26
4.4.1 Applications of Models	.....	4.27
4.4.2 Model Calibration	.....	4.27
<b>REFERENCES</b>	.....	4.28

## CHAPTER 5 PUMP SYSTEM HYDRAULIC DESIGN

<b>5.1 PUMP TYPES AND DEFINITIONS</b>	.....	5.1
5.1.1 Pump Standards	.....	5.1
5.1.2 Pump Definitions and Terminology	.....	5.2
5.1.3 Types of Centrifugal Pumps	.....	5.6
<b>5.2 PUMP HYDRAULICS</b>	.....	5.8
5.2.1 Pump Performance Curves	.....	5.8
5.2.2 Pipeline Hydraulics and System Curves	.....	5.8
5.2.2.1 Hazen-Williams equation	.....	5.8
5.2.2.2 Manning's equation	.....	5.11
5.2.2.3 Darcy-Weisbach equation	.....	5.11
5.2.2.4 Comparisons of f, C, and n	.....	5.12
5.2.3 Hydraulics of Valves	.....	5.12
5.2.4 Determination of Pump Operating Points-Single Pump	.....	5.13
5.2.5 Pumps Operating in Parallel	.....	5.13
5.2.6 Variable-Speed Pumps	.....	5.13
<b>5.3 CONCEPT OF SPECIFIC SPEED</b>	.....	5.18
5.3.1 Introduction: Discharge-Specific Speed	.....	5.18
5.3.2 Suction-Specific Speed	.....	5.19
<b>5.4 NET POSITIVE SUCTION HEAD</b>	.....	5.19
5.4.1 Net Positive Suction Head Available	.....	5.19
5.4.2 Net Positive Suction Head Required by a Pump	.....	5.20
5.4.3 NPSH Margin or Safety Factor Considerations	.....	5.22
5.4.4 Cavitation	.....	5.22
<b>5.5 CORRECTED PUMP CURVES</b>	.....	5.22

<b>5.6 HYDRAULIC CONSIDERATIONS IN PUMP SELECTION</b>	5.27
5.6.1 Flow Range of Centrifugal Pumps	5.27
5.6.2 Causes and Effects of Centrifugal Pumps Operating Outside Allowable Flow Ranges	5.28
5.6.3 Summary of Pump Selection	5.28
<b>5.7 APPLICATION OF PUMP HYDRAULIC ANALYSIS TO DESIGN OF PUMPING STATION COMPONENTS</b>	5.30
5.7.1 Pump Hydraulic Selections and Specifications	5.30
5.7.1.1 Pump operating ranges	5.30
5.7.1.2 Specific pump hydraulic operating problems	5.32
5.7.2 Piping	5.32
5.7.2.1 Pump suction and discharge piping installation guidelines	5.33
5.7.2.2 Fluid velocity	5.33
5.7.2.3 Design of pipe wall thickness (pressure design)	5.33
5.7.2.4 Design of pipe wall thickness (vacuum conditions)	5.34
5.7.2.5 Summary of pipe design criteria	5.35
<b>5.8 IMPLICATIONS OF HYDRAULIC TRANSIENTS IN PUMPING STATION DESIGN</b>	5.35
5.8.1 Effect of Surge on Valve Selection	5.35
5.8.2 Effect of Surge on Pipe Material Selection	5.36
<b>REFERENCES</b>	5.36
<b>APPENDIX</b>	5.37

## CHAPTER 6 HYDRAULIC TRANSIENT DESIGN FOR PIPELINE SYSTEMS

<b>6.1 INTRODUCTION TO WATERHAMMER AND SURGING</b>	6.1
<b>6.2 FUNDAMENTALS OF WATERHAMMER AND SURGE</b>	6.2
6.2.1 Definitions	6.2
6.2.2 Acoustic Velocity	6.2
6.2.3 Joukowsky (Waterhammer) Equation	6.3
<b>6.3 HYDRAULIC CHARACTERISTICS OF VALVES</b>	6.4
6.3.1 Descriptions of Various Types of Valves	6.5
6.3.2 Definition of Geometric Characteristics of Valves	6.6
6.3.3 Definition of Hydraulic Performance of Valves	6.6
6.3.4 Typical Geometric and Hydraulic Valve Characteristics	6.8
6.3.5 Valve Operation	6.9
<b>6.4 HYDRAULIC CHARACTERISTICS OF PUMPS</b>	6.9
6.4.1 Definition of Pump Characteristics	6.10
6.4.2 Homologous (Affinity) Laws	6.10
6.4.3 Abnormal Pump (Four-Quadrant) Characteristics	6.12
6.4.4 Representation of Pump Data for Numerical Analysis	6.15
6.4.5 Critical Data Required for Hydraulic Analysis of Systems with Pumps	6.16
<b>6.5 SURGE PROTECTION AND SURGE CONTROL DEVICES</b>	6.18
6.5.1 Critical Parameters for Transients	6.18
6.5.2 Critique of Surge Protection	6.20
6.5.3 Surge Protection Control and Devices	6.22
<b>6.6 DESIGN CONSIDERATIONS</b>	6.24
<b>6.7 NEGATIVE PRESSURES AND WATER COLUMN SEPARATION IN PIPEWORKS</b>	6.26
<b>6.8 ME CONSTANTS FOR HYDRAULIC SYSTEMS</b>	6.27

6.9 CASE STUDIES .....	6.27
6.9.1 Case Study with One-way and Simple Surge Tanks .....	6.27
6.9.2 Case Study with Air chamber .....	6.28
6.9.3 Case Study with Air-vacuum Breaker .....	6.31
REFERENCES .....	6.32

## CHAPTER 7 OPTIMAL DESIGN OF WATER DISTRIBUTION SYSTEMS

7.1 OVERVIEW .....	7.1
7.2 PROBLEM DEFINITION .....	7.1
7.3 MATHEMATICAL FORMULATION .....	7.3
7.4 OPTIMIZATION METHODS .....	7.4
7.4.1 Branched Systems .....	7.4
7.4.2 Looped Pipe Systems via Linearization .....	7.5
7.4.3 General System Design via Nonlinear Programming .....	7.7
7.4.4 Stochastic Search Techniques .....	7.8
7.5 APPLICATIONS .....	7.9
7.6 SUMMARY .....	7.12
REFERENCES .....	7.13

## CHAPTER 8 WATER-QUALITY ASPECTS OF CONSTRUCTION AND OPERATIONS

8.1 INTRODUCTION .....	8.1
8.2 DISINFECTION OF NEW WATER MAINS .....	8.1
8.2.1 Need for Disinfection .....	8.2
8.2.2 Disinfection Chemicals .....	8.2
8.2.3 Disinfection Procedures .....	8.2
8.2.3.1 The tablet method .....	8.2
8.2.3.2 The continuous feed method .....	8.3
8.2.3.3 The slug method .....	8.3
8.2.4 Testing New Mains .....	8.3
8.2.5 Main Repairs .....	8.3
8.2.6 Disposal of Highly Chlorinated Water .....	8.3
8.3 DISINFECTION OF STORAGE TANKS .....	8.4
8.3.1 Disinfection Procedures for Filling Tanks .....	8.4
8.3.1.1 Method 1 .....	8.4
8.3.1.2 Method 2 .....	8.4
8.3.1.3 Method 3 .....	8.5
8.3.2 Underwater Inspection .....	8.5
8.4 CROSS-CONNECTION CONTROL .....	8.5
8.4.1 Definitions .....	8.5
8.4.2 Cross-Connection Control Programs .....	8.5
8.4.3 Backflow Prevention .....	8.6
8.4.3.1 Air Gap .....	8.6
8.4.3.2 Reduced-pressure backflow preventers and double-check valve assemblies .....	8.6
8.4.3.3 Atmospheric and pressure vacuum breakers, and barometric loops .....	8.6
8.4.3.4 Single and dual check valves .....	8.7
8.4.4 Application of Backflow Preventers .....	8.7

<b>8.5 FLUSHING OF DISTRIBUTION SYSTEMS</b>	.....	8.8
8.5.1 Background	.....	8.8
8.5.2 Flushing Procedures	.....	8.8
8.5.3 Directional Flushing	.....	8.9
8.5.4 Alternating of Disinfectants	.....	8.9
<b>REFERENCES</b>	.....	8.10

## CHAPTER 9 WATER QUALITY

<b>9.1 INTRODUCTION</b>	.....	9.1
9.1.1 Overview	.....	9.1
9.1.2 Definitions	.....	9.2
<b>9.2 WATER-QUALITY PROCESSES</b>	.....	9.3
9.2.1 Loss of Disinfectant Residual	.....	9.3
9.2.1.1 Disinfection methods	.....	9.4
9.2.1.2 Rates of disinfectant loss	.....	9.5
9.2.1.3 Mitigation of disinfectant loss	.....	9.5
9.2.2 Growth of Disinfection By-products	.....	9.6
9.2.3 Internal Corrosion	.....	9.6
9.2.3.1 Types of corrosion	.....	9.7
9.2.3.2 Factors affecting corrosion	.....	9.7
9.2.3.3 Indicators of corrosion	.....	9.8
9.2.3.4 Control of corrosion	.....	9.8
9.2.4 Biofilms	.....	9.9
9.2.4.1 Origins	.....	9.9
9.2.4.2 Composition	.....	9.9
9.2.4.3 Significance	.....	9.10
9.2.4.4 Treatment and control	.....	9.10
<b>9.3 WATER-QUALITY MONITORING</b>	.....	9.11
9.3.1 Routine Monitoring	.....	9.11
9.3.1.1 Regulatory requirements	.....	9.11
9.3.1.2 Sampling methods	.....	9.11
9.3.1.3 Sampling parameters	.....	9.11
9.3.2 Synoptic Monitoring	.....	9.11
<b>9.4 WATER-QUALITY MODELING</b>	.....	9.15
9.4.1 History	.....	9.16
9.4.2 Governing Equations	.....	9.16
9.4.2.1 Advective transport in pipes	.....	9.17
9.4.2.2 Mixing at pipe junctions	.....	9.17
9.4.2.3 Mixing in storage facilities	.....	9.17
9.4.2.4 Bulk flow reactions	.....	9.17
9.4.2.5 Pipe wall reactions	.....	9.18
9.4.2.6 System of equations	.....	9.18
9.4.3 Solution Methods	.....	9.18
9.4.3.1 Steady-state models	.....	9.18
9.4.3.2 Dynamic models	.....	9.19
9.4.4 Data Requirements	.....	9.20
9.4.4.1 Hydraulic data	.....	9.20
9.4.4.2 Water-quality data	.....	9.20
9.4.4.3 Reaction-rate data	.....	9.20
9.4.5 Model Calibration	.....	9.21

9.4.5.1 Calibration of conservative substances .....	9.21
9.4.5.2 Calibration of nonconservative substances .....	9.21
9.4.5.3 Uses for hydraulic calibration. ....	9.21
<b>REFERENCES .....</b>	<b>9.22</b>

## **CHAPTER 10 HYDRAULIC DESIGN OF WATER DISTRIBUTION STORAGE TANKS**

<b>10.1 INTRODUCTION .....</b>	<b>10.1</b>
<b>10.2 BASIC CONCEPTS .....</b>	<b>10.2</b>
10.2.1 Equalization .....	10.2
10.2.2 Pressure Maintenance .....	10.2
10.2.3 Fire Storage .....	10.2
10.2.4 Emergency Storage .....	10.2
10.2.5 Energy Consumption .....	10.3
10.2.6 Water Quality .....	10.3
10.2.7 Hydraulic Transient Control .....	10.3
10.2.8 Aesthetics .....	10.4
<b>10.3 DESIGN ISSUES .....</b>	<b>10.4</b>
10.3.1 Floating Versus Pumped Storage .....	10.4
10.3.2 Ground Versus Elevated Tank .....	10.5
10.3.3 Effective Versus Total Storage .....	10.6
10.3.4 Private Versus Utility Owned Tanks .....	10.6
10.3.5 Pressurized Tanks .....	10.6
<b>10.4 LOCATION .....</b>	<b>10.7</b>
10.4.1 Clearwell Storage .....	10.7
10.4.2 Tanks Downstream of the Demand Center .....	10.8
10.4.3 Multiple Tanks in the Pressure Zone .....	10.8
10.4.4 Multiple Pressure-Zone Systems .....	10.9
10.4.5 Other Siting Considerations .....	10.9
<b>10.5 TANK LEVELS .....</b>	<b>10.9</b>
10.5.1 Setting Tank Overflow Levels .....	10.9
10.5.2 Identifying Tank Service Areas .....	10.10
10.5.3 Identifying Pressure Zones .....	10.10
<b>10.6 TANK VOLUME .....</b>	<b>10.11</b>
10.6.1 Trade-offs in Tank Volume Design .....	10.11
10.6.2 Standards-Driven Sizing .....	10.12
10.6.3 Functional Design .....	10.12
10.6.3.1 Equalization Storage.....	10.12
10.6.3.2 Fire Storage.....	10.14
10.6.3.3 Emergency Storage.....	10.16
10.6.3.4 Combination Equalization, Fire and Emergency Storage. ....	10.16
10.6.3.5 Summary of Functional Sizing. ....	10.16
10.6.4 Staging Requirements .....	10.16
10.6.5 Useful Dead Storage .....	10.17
<b>10.7 OTHER DESIGN CONSIDERATIONS .....</b>	<b>10.18</b>
10.7.1 Altitude Valves .....	10.18
10.7.2 Cathodic Protection and Coatings .....	10.18
10.7.3 Overflows and Vents .....	10.18
<b>REFERENCES .....</b>	<b>10.19</b>

## **CHAPTER 11 QUALITY OF WATER IN STORAGE**

<b>1 INTRODUCTION</b>	11.1
11.1.1 Overview	11.1
11.1.2 Definitions	11.2
<b>2 WATER QUALITY PROBLEMS</b>	11.2
11.2.1 Chemical Problems	11.2
11.2.1.1 Loss of disinfectant residual	11.2
11.2.1.2 Formation of disinfection by-products	11.3
11.2.1.3 Development of taste and odor	11.3
11.2.1.4 Increase in pH	11.4
11.2.1.5 Corrosion	11.4
11.2.1.6 Buildup of iron and manganese	11.4
11.2.1.7 Occurrence of hydrogen sulfide	11.5
11.2.1.8 Leachate from internal coatings	11.5
11.2.2 Microbiological Problems	11.5
11.2.2.1 Bacterial regrowth	11.5
11.2.2.2 Nitrification	11.6
11.2.2.3 Worms and Insects	11.6
11.2.3 Physical Problems	11.7
11.2.3.1 Sediment buildup	11.7
11.2.3.2 Entry of contaminants	11.7
11.2.3.3 Temperature	11.8
<b>3 MIXING AND AGING IN STORAGE FACILITIES</b>	11.8
11.3.1 Ideal Flow Regimes	11.8
11.3.2 Jet Mixing	11.9
11.3.3 Mixing Times	11.9
11.3.4 Stratification	11.10
11.3.5 Aging	11.11
<b>MONITORING AND SAMPLING</b>	11.12
11.4.1 Routine Monitoring	11.12
11.4.1.1 Typical parameters of water quality	11.13
11.4.1.2 Parameters of nitrification monitoring	11.13
11.4.1.3 Parameters of sediment monitoring	11.13
11.4.1.4 Parameters of biofilm monitoring	11.17
11.4.2 Sampling Methods and Equipment	11.17
11.4.3 Monitoring Frequency and Location of Samples	11.18
11.4.4 Special Studies	11.20
11.4.4.1 Intensive studies of water quality and tracers	11.20
11.4.4.1 Temperature monitoring	11.20
<b>MODELING</b>	11.22
11.5.1 Scale Models	11.22
11.5.1.1 Principles of similitude	11.22
11.5.1.2 Construction of a model	11.23
11.5.1.3 Types of tracers	11.24
11.5.1.4 Temperature modeling	11.25
11.5.2 Computational Fluid Dynamics	11.25
11.5.2.1 Mathematical formulations of CFD models	11.26
11.5.2.2 Application of CFD Models	11.27
11.5.3 Systems Models	11.28

11.5.3.1 Background .....	11.28
11.5.3.2 Elemental systems models .....	11.28
11.5.3.3 Compartment models .....	11.28
11.5.3.4 Application of systems models .....	11.28
<b>11.6 DESIGN AND OPERATIONAL ISSUES .....</b>	<b>11.30</b>
11.6.1 Water-Quality Design Objectives .....	11.30
11.6.2 Modes of Operation: Simultaneous Inflow-Outflow Versus Fill and Draw .....	11.30
11.6.3 Flow Regimes: Complete Mix Versus Plug Flow .....	11.30
11.6.3.1 Effects os flow regime on loss of disinfectant in reservoirs .....	11.31
11.6.3.2 Mixed flow .....	11.31
11.6.3.3 Plug flow .....	11.32
11.6.3.4 Recommendations .....	11.33
11.6.4 Stratification in Reservoirs .....	11.33
<b>11.7 INSPECTION AND MAINTENANCE ISSUES .....</b>	<b>11.34</b>
11.7.1 Inspections .....	11.34
11.7.2 Maintenance .....	11.36
<b>REFERENCES .....</b>	<b>11.36</b>

## CHAPTER 12 COMPUTER MODELS/EPLANET

<b>12.1 INTRODUCTION .....</b>	<b>12.1</b>
12.1.1 Need for Computer Models .....	12.1
12.1.2 Uses of Computer Models .....	12.2
12.1.3 History of Computer Models .....	12.2
<b>12.2 USE OF A COMPUTER MODEL .....</b>	<b>12.3</b>
12.2.1 Network Representation .....	12.3
12.2.1.1 Network components .....	12.3
12.2.1.2 Network skeletonization .....	12.4
12.2.2 Compilation of Data .....	12.4
12.2.2.1 ID labels .....	12.5
12.2.2.2 Nodal elevations .....	12.5
12.2.2.3 Pipe diameters .....	12.5
12.2.2.4 Pipe roughness .....	12.6
12.2.2.5 Pump curves .....	12.6
12.2.3 Estimation of Demand .....	12.6
12.2.4 Operating Characteristics .....	12.7
12.2.5 Reaction-Rate Information .....	12.7
12.2.6 Model Calibration .....	12.8
<b>12.3 COMPUTER MODEL INTERNALS .....</b>	<b>12.8</b>
12.3.1 Input Processing .....	12.9
12.3.2 Topological Processing .....	12.9
12.3.3 Hydraulic Solution Algorithms .....	12.9
12.3.4 Linear-Equation Solver .....	12.11
12.3.5 Extended-Period Solver .....	12.11
12.3.6 Water-Quality Algorithms .....	12.12
12.3.7 Output Processing .....	12.12
<b>12.4 EPANET PROGRAM .....</b>	<b>12.13</b>
12.4.1 Background .....	12.13
12.4.2 Program Features .....	12.14

12.4.3 User Interface .....	12.15
12.4.4 Solver Module .....	12.17
12.4.5 Programmer's Toolkit .....	12.20
2.5 CONCLUSION .....	12.20
REFERENCES .....	12.21

## CHAPTER 13 WATER QUALITY MODELING-CASE STUDIES

3.1 INTRODUCTION .....	13.1
3.2 DESIGN OF DISTRIBUTION SYSTEMS IN THE UNITED STATES .....	13.2
3.3 WATER QUALITY IN NETWORKS .....	13.3
3.4 HYDRAULIC AND WATER-QUALITY MODELS .....	13.4
13.4.1 Steady-State-Water Quality Models .....	13.5
13.4.2 Dynamic Water-Quality Models .....	13.5
3.5 EARLY APPLICATIONS OF WATER-QUALITY MODELING .....	13.6
13.5.1 North Penn Study .....	13.6
13.5.1.1 Network modeling .....	13.7
13.5.1.2 Variations in water quality data .....	13.8
13.5.1.3 Development of dynamic water-quality algoritm .....	13.8
13.5.2 South Central Connecticut Regional Water Authority .....	13.9
13.5.2.1 System modeling .....	13.13
13.5.2.2 Design of the field study .....	13.13
13.5.2.3 Results from the field study .....	13.13
13.5.2.4 Verification study .....	13.17
13.5.2.5 Presampling procedures .....	13.17
13.5.2.6 Analysis of sampling results .....	13.17
13.5.2.7 Modeling of chlorine residual .....	13.21
13.5.3 Case Study of Cabool, Missouri .....	13.22
6 EVOLUTION OF WATER QUALITY MODELING .....	13.22
7 MODELING PROPAGATION OF CONTAMINANTS .....	13.23
13.7.1 Case Study of the North Marin Water District .....	13.24
13.7.1.1 Water-quality study .....	13.29
13.7.1.2 Modeling of total trihalomethane formations .....	13.30
13.7.1.3 Chlorine demand .....	13.34
13.7.1.4 Effect of system demand .....	13.34
13.7.2 Complement to the North Marin study .....	13.34
13.7.3 Waterborne Outbreak in Gideon, Missouri .....	13.36
13.7.3.1 Description of the system .....	13.38
13.7.3.2 Identification of the outbreak .....	13.39
13.7.3.3 Possible causes .....	13.40
13.7.3.4 Evaluation of the System .....	13.41
13.7.3.5 Performance of the System .....	13.41
13.7.3.6 Propagation of the contaminant .....	13.43
8 CURRENT TRENDS IN WATER-QUALITY MODELING .....	13.44
13.8.1 Study in Cholet, France .....	13.44
13.8.2 Case Study in Southington, Connecticut .....	13.44
13.8.3 Mixing in Storage Tanks .....	13.45
9 SUMMARY AND CONCLUSIONS .....	13.45
REFERENCES .....	13.46

## **CHAPTER 14 CALIBRATION OF HYDRAULIC NETWORK MODELS**

<b>14.1 INTRODUCTION</b> . . . . .	14.1
14.1.1 Network Characterization . . . . .	14.1
14.1.2 Network Data Requirements . . . . .	14.1
14.1.3 Model Parameters . . . . .	14.3
<b>14.2 IDENTIFY THE INTENDED USE OF THE MODEL</b> . . . . .	14.3
<b>14.3 DETERMINE ESTIMATES OF THE MODEL PARAMETERS</b> . . . . .	14.3
14.3.1 Pipe Roughness Values . . . . .	14.4
14.3.1.1 Chart the pipe roughness . . . . .	14.4
14.3.1.2 Field test the pipe roughness . . . . .	14.6
14.3.2 Distribution of Nodal Demands . . . . .	14.9
14.3.2.1 Spatial distribution of demands . . . . .	14.10
14.3.2.2 Temporal distribution of demands . . . . .	14.12
<b>14.4 COLLECT CALIBRATION DATA</b> . . . . .	14.12
14.4.1 Fire-Flow Tests . . . . .	14.12
14.4.2 Telemetric Data . . . . .	14.13
14.4.3 Water-Quality Data . . . . .	14.14
<b>14.5 EVALUATE THE RESULTS OF THE MODEL</b> . . . . .	14.14
<b>14.6 PERFORM A MACRO-LEVEL CALIBRATION OF THE MODEL</b> . . . . .	14.15
<b>14.7 PERFORM A SENSITIVITY ANALYSIS</b> . . . . .	14.16
<b>14.8 PERFORM A MACRO-LEVEL CALIBRATION OF THE MODEL</b> . . . . .	14.16
14.8.1 Analytical Approaches . . . . .	14.17
14.8.2 Simulation Approaches . . . . .	14.17
14.8.3 Optimization Approaches . . . . .	14.17
<b>14.9 FUTURE TRENDS</b> . . . . .	14.21
<b>14.10 SUMMARY AND CONCLUSION</b> . . . . .	14.21
<b>REFERENCES</b> . . . . .	14.21

## **CHAPTER 15 OPERATION OF WATER DISTRIBUTION SYSTEMS**

<b>15.1 INTRODUCTION</b> . . . . .	15.1
<b>15.2 HOW SYSTEMS ARE OPERATED</b> . . . . .	15.2
15.2.1 Typical Operating Indexes . . . . .	15.2
15.2.2 Operating Criteria . . . . .	15.3
15.2.3 Water Quality and Operations . . . . .	15.4
15.2.4 Emergency Operations . . . . .	15.4
<b>15.3 MONITORING OF SYSTEM PERFORMANCE WITH SCADA SYSTEMS</b> . . . . .	15.5
15.3.1 Anatomy of a SCADA System . . . . .	15.6
15.3.2 Data Archiving . . . . .	15.9
<b>15.4 CONTROL OF WATER DISTRIBUTION SYSTEM</b> . . . . .	15.9
15.4.1 Control Strategies . . . . .	15.10
15.4.1.1 Supervisory control . . . . .	15.10
15.4.1.2 Automatic control . . . . .	15.10
15.4.1.3 Advanced control . . . . .	15.10
15.4.2 Centralized Versus Local Control . . . . .	15.11
<b>15.5 LINKING OF SCADA SYSTEMS WITH ANALYSIS AND CONTROL MODELS</b> . . . . .	15.11
15.5.1 Data Requirements of Analysis and Control Models . . . . .	15.12
15.5.2 Establishment of the Link . . . . .	15.13

15.6 USE OF CENTRAL DATABASES IN SYSTEM CONTROL .....	15.15
15.7 WHAT THE FUTURE HOLDS .....	15.16
REFERENCES .....	15.16

## **CHAPTER 16 OPTIMIZATION MODELS FOR OPERATIONS**

16.1 INTRODUCTION .....	16.1
16.2 FORMULATIONS FOR MINIMIZING ENERGY COST MINIMIZATION .....	16.3
16.2.1 Energy Management .....	16.3
16.2.2 Management Strategies .....	16.3
16.2.3 Management Models .....	16.5
16.2.3.1 Hydraulic network models .....	16.5
16.2.3.2 Demand forecast models .....	16.7
16.2.3.3 Control models .....	16.8
16.2.4 Optimization Models .....	16.9
16.2.4.1 Problem formulation .....	16.9
16.2.4.2 System classification .....	16.10
16.2.5 Summary and Conclusions .....	16.14
16.3 FORMULATIONS TO SATISFY WATER QUALITY .....	16.16
16.4 SOLUTION METHODS AND APPLICATIONS FOR WATER-QUALITY PURPOSES .....	16.19
16.4.1 Mathematical Programming Approach .....	16.19
16.4.2 Simulated Annealing Approach .....	16.22
16.4.3 Development of Cost Function .....	16.24
16.4.4 Sample Application .....	16.26
16.4.5 Advantages and Disadvantages of the Two Methods .....	16.28
16.5 OPTIMAL SCHEDULING OF BOOSTER DISINFECTION .....	16.28
16.5.1 Background 1: Linear Superposition .....	16.33
16.5.2 Background 2: Dynamic Network Water-Quality Models in a Planning Context .....	16.34
16.5.3 Optimal Scheduling of Booster-Station Dosages as Linear Programming Problem .....	16.36
16.5.4 Optimal Location and Scheduling of Booster-Station Dosage as a Mixed-Integer Linear Programming Problem .....	16.36
16.5.5 Optimal Location of Booster Stations as a Maximum Set-Covering Problem .....	16.38
16.5.6 Solution of the Optimization Models .....	16.40
16.5.7 Available Software .....	16.41
16.5.8 Summary .....	16.42
16.6 REFERENCES .....	16.43

## **CHAPTER 17 MAINTENANCE AND REHABILITATION/ REPLACEMENT**

INTRODUCTION .....	17.1
17.1.1 Maintenance and Rehabilitation Problems .....	17.1
17.1.1.1 Normal wear .....	17.1
17.1.1.2 Corrosion .....	17.2
17.1.1.3 Unforeseen loads .....	17.2
17.1.1.4 Poor manufacture and installation .....	17.2
17.1.2 Preview of the Chapter .....	17.2

17.2 UNACCOUNTED-FOR WATER .....	17.2
17.2.1 Indicators for Unaccounted-for Water .....	17.3
17.2.2. Understanding the Causes of Unaccounted-for Water .....	17.3
17.2.3 Components of Unaccounted-for Water .....	17.5
17.2.3.1 Water main leakage .....	17.5
17.2.3.2 Service pipe leakage .....	17.7
17.2.3.3 System pressure .....	17.7
17.2.3.4 Fire fighting .....	17.7
17.2.3.5 Main flushing .....	17.8
17.2.3.6 Blowoffs .....	17.8
17.2.3.7 Flat rate customers .....	17.8
17.2.3.8 Authorized unmetered uses .....	17.8
17.2.3.9 Meter under registration .....	17.8
17.2.3.10 Theft of water .....	17.9
17.2.4. Summary .....	17.9
17.3 PIPE BREAKS .....	17.10
17.3.1 Corrosion .....	17.10
17.3.1.1 External soil corrosion .....	17.10
17.3.1.2 Internal corrosion .....	17.11
17.3.1.3 Stray current corrosion .....	17.11
17.3.1.4 Bimetallic connections .....	17.11
17.3.2. External Loads .....	17.11
17.3.3 Poor Tapping .....	17.13
17.3.4. Pressure-Related Breaks .....	17.13
17.3.5. Repair Versus Replacement .....	17.14
17.4 HYDRAULIC CARRYING CAPACITY .....	17.16
17.4.1 Diagnosis of Pressure Problems .....	17.16
17.4.1.1 Pressure gauges .....	17.16
17.4.1.2 Hydraulic modeling .....	17.16
17.4.2 Correction of Pressure Problems .....	17.17
17.4.2.1 Closed isolating valves .....	17.17
17.4.2.2 Elevation and pressure zone issues .....	17.18
17.4.2.3 Carrying capacity .....	17.18
17.4.2.4 Inadequate capacity .....	17.19
17.4.3 Pipe Rehabilitation Technology .....	17.20
17.4.4. Evaluation of Pipe Rehabilitation .....	17.21
17.5 MAINTENANCE INFORMATION SYSTEMS .....	17.21
17.5.1 System Mapping .....	17.22
17.5.2 System Database .....	17.22
17.5.3 Geographic Information Systems .....	17.22
17.5.4 Maintenance Management Systems .....	17.23
17.5.5 SCADA Systems .....	17.23
REFERENCES .....	17.24

## CHAPTER 18 RELIABILITY ANALYSIS FOR DESIGN

18.1 FAILURE MODES FOR WATER DISTRIBUTION SYSTEMS .....	18.1
18.1.1 Need and Justification .....	18.1
18.1.2 Definitions of Distribution System Repairs .....	18.3
18.1.3 Failure Modes .....	18.4
18.1.3.1 Performance failure .....	18.4
18.1.3.2 Component (mechanical) failure .....	18.5

18.1.4 Reliability: Indexes and Approaches .....	18.5
<b>18.2 PRACTICAL ASPECTS OF PROVIDING RELIABILITY .....</b>	<b>18.6</b>
<b>18.2.1 Improving the Reliability of Water Distribution Systems .....</b>	<b>18.6</b>
18.2.1.1 Piping materials .....	18.6
18.2.1.2 Construction methods .....	18.7
18.2.1.3 Pipe sizing .....	18.7
18.2.1.4 Looped water distribution system .....	18.7
18.2.1.5 Emergency Storage .....	18.8
18.2.1.6 Backup pumping and control valves .....	18.8
18.2.1.7 Standby power .....	18.8
18.2.1.8 Emergency controls .....	18.8
18.2.1.9 Emergency interconnections .....	18.9
18.2.1.10 Water distribution system modeling .....	18.9
18.2.1.11 Transient analysis .....	18.9
18.2.1.12 Operational considerations .....	18.9
18.2.1.13 Maintenance considerations .....	18.10
<b>18.2.2 Analyzing the Effect of Valving on System Reliability .....</b>	<b>18.10</b>
18.2.2.1 Background .....	18.10
18.2.2.2 Diagrams of distribution segments .....	18.10
18.2.2.3 Loops served from transmission mains .....	18.11
18.2.2.4 Emergency interconnections .....	18.11
18.2.2.5 Transmission lines connected to old systems .....	18.13
18.2.2.6 Typical cross-intersections .....	18.13
18.2.2.7 Application of segments in valve locations and reliability evaluation .....	18.14
<b>3 COMPONENT RELIABILITY ANALYSIS .....</b>	<b>18.15</b>
<b>18.3.1 Failure Density, Failure Rate, and Mean Time To Failure .....</b>	<b>18.15</b>
<b>18.3.2 Availability and Unavailability .....</b>	<b>18.19</b>
<b>4 REVIEW OF MODELS FOR RELIABILITY OF WATER DISTRIBUTION STEMS .....</b>	<b>18.21</b>
<b>18.4.1 Reliability of a System Failure .....</b>	<b>18.21</b>
<b>18.4.2 Failure Modes .....</b>	<b>18.22</b>
<b>18.4.3 Approaches to the Assessment of Reliability .....</b>	<b>18.25</b>
<b>18.4.4 Models and Techniques for Assessing Network Reliability .....</b>	<b>18.29</b>
18.4.4.1 Simulation models .....	18.29
18.4.4.2 Analytical approaches .....	18.33
18.4.4.3 Heuristic techniques .....	18.39
18.4.4.4 Redundancy based measures .....	18.39
<b>18.4.5 Overview of Reliability Measures .....</b>	<b>18.40</b>
<b>18.4.6 Observations .....</b>	<b>18.42</b>
<b>MEASURE OF LINK IMPORTANCE .....</b>	<b>18.43</b>
<b>REFERENCES .....</b>	<b>18.49</b>
