Handbooks in TRANSPORT Volume 1

## Handbook of TRANSPORT MODELLING

Edited by David A. Hensher and Kenneth J. Button

PERGAMON

## **CONTENTS**

Introduction to the Series	v
Chapter !	
Introduction	
DAVID A. HENSHER and KENNETH J. BUTTON	1
1. Introduction	1
2. Transport modelling	
3. What is a good model?	3
4. Where is transport modelling moving?	2 3 5
5. The changing policy agenda	7
6. The Handbook	9
Chapter 2	
History of Demand Modelling	
JOHN BATES	11
1. Introduction	11
2. Supply and demand	12
3. Aspects of demand	14
4. The four-stage model	17
4.1. Assignment	18
4.2. Concluding remarks	20
5. Models of trip production	20
5.1. Car ownership	23
5.2. Models of trip attraction	25
6. Models of distribution or destination choice	26
6.1. Forecasting the future distribution	29
7. Models of mode choice	29
8. Overall model structure	31
References	32
Chapter 3	
The Four-step Model	
MICHAEL G. McNALLY	35
1. Introduction	35
2. Transportation systems analysis	36

viii	Cor	ntents

		<u> </u>
3.	Problems, study areas, models, and data	37
	3.1. Study area definition	38
	3.2. Models	38
	3.3. Data	40
	3.4. A sample problem	41
4.	Trip generation	42
	4.1. Process	42
	4.2. A sample household-trip-production model	44
	4.3. A sample zonal-attraction model	45
	4.4. Application to the base population	45
	4.5. Time of day	45
5.	Trip distribution	46
	5.1. Process	46
	5.2. Travel impedance and skim trees	47
	5.3. A sample gravity model	. 47
	5.4. Adjustments	48
6.	Mode choice	48
7.	Route choice	49
	7.1. Process	50
	7.2. A sample assignment of vehicle trip tables to the highway network	50
8.	Summary	51
Re	eferences	52
Chapt		
	Activity-based Approach	53
	HAEL G. McNALLY	
	Introduction	53
2.	• • •	54
	2.1. The four-step model	54
	2.2. Limitations	55
3.	· · · · · · · · · · · · · · · · · · ·	· 56
	3.1. Characteristics of the activity-based approach	58
	3.2. Theory and conceptual frameworks	59
4.		60
5.		61
	5.1. Simulation-based applications	61
	5.2. Econometric-based applications	63
	5.3. Other applications	64
6.	Summary and future directions	65
	6.1. Current modeling needs	65
	6.2. Data needs	66

Contents	ix

	6.3. Policy applications	66
_	6.4. Where we are and where we are going	67

Chapter 7	
Longitudinal Methods	
RYUICHI KITAMURA	113
1. Introduction	113
2. Panel surveys as a means of collecting longitudinal data	a 113
3. Cross-sectional vs. longitudinal analyses	114
4. Travel behavior dynamics	116
5. Stochastic processes	118
5.1. Renewal processes	118
5.2. Markov renewal processes	119
5.3. Markov processes	119
5.4. Markov chains	120
6. Discrete time panel data and analyses	121
6.1. Linear models	122
6.2. Distributed-lag models	123
6.3. Lagged dependent variables	123
6.4. Non-linear models	125
6.5. Dynamic models	125
6.6. Initial conditions	126
6.7. State dependence vs. heterogeneity	126
7. Issues in panel survey design	127
8. Conclusion	128
References	128
Chapter 8	
Stated-preference Methods	
JORDAN LOUVIERE and DEBORAH STREET	. 131
1. Introduction	131
2. Random utility based SP methods	132
3. Choice experiment designs consistent with RUT	136
4. Statistical properties of choice experiments	137
4.1. Paired comparisons	137
4.2. Multiple comparisons (choices)	138
References	142

•	ytical Dynamic Traffic Assignment Models	
TERR	Y L. FRIESZ and DAVID BERNSTEIN	181
1.	Introduction	
2.	What is dynamic traffic assignment?	181 182
₩.	· · · · · · · · · · · · · · · · · · ·	182

xii	Contents

3.	Dynamic network loading and dynamic traffic assignment	183
	3.1. Notation	183
4.	Dynamics based on arc exit-flow functions	183
5.	•	185
6.		187
7.	Dynamics based on arc exit-time functions	188
	Dynamic user equilibrium	191
9.	Tatonnement and projective dynamics	193
Re	ferences	194
Chapte	r 12	
	sport Demand Elasticities	405
TAE I	HOON OUM and W. G. WATERS II	197
1.	Concepts and interpretation of demand elasticities	197
	1.1. Ordinary and compensated clasticities	197
	1.2. Other elasticity concepts	198
	1.3. Mode-choice elasticities	201
	1.4. Disaggregate discrete-choice models	202
	1.5. Linkages between concepts of elasticities	203
2.	Estimates of price elasticities	204
3.	Some guidelines and pitfalls in estimating transport demand	
	elasticities	206
	3.1. The importance of market-specific demand studies	206
	3.2. Types of transport demand elasticity studies	206
	3.3. Specification of demand functions	207
	3.4. Interpretation of elasticities	208
4.	Concluding remarks	209
Re	ferences	209
Chapt	er 13	
Close	ed-form Discrete-choice Models	
FRAN	IK S. KOPPELMAN and VANEET SETHI	211
1.	Introduction	211
2.	Multinomial logit model	212
	2.1. Independence of errors across alternatives	213
	2.2. Equality of error variance across cases	213
3.	Relaxation of the independence of errors across alternatives	214
	3.1. The nested logit model	214
	3.2. Generalized extreme value models	216
	3.3. Universal (mother) logit models	221
	3.4. Overview of models that relax the independence of errors over	
	alternatives	222

Contents	xiii

4.	Relaxation of the equality of errors over cases	223
5.	Future developments in closed-form choice models	224
Re	eferences	225
Chapt		
	ey and sampling strategies	220
	R. Stopher	229
	Introduction	229
2.	Survey methods	231
	2.1. Household travel surveys	232
	2.2. Other non-household-based surveys	235
3.	Sampling strategies	239
	3.1. Sampling frames	240
	3.2. Error and bias	240
	3.3. Sampling methods	241
4.	The future	249
Re	eferences	250
