Raymond C. Williams

Preface		xiii
Acknowledgments		xv
About the Authors		xvii
Chapter 1	CIM Introduction	1
	CIM History	1
	How CIM Works	2
	CIM Specification and CIM Schema	3
	Core Schema	5
	Common Schema	7
	Extension Schemas	10
	Managed Object Format	10
	CIM in the Management Industry	11
	Relationship to WBEM	11
	xmlCIM	14
	CIM Operations over HTTP	15
	Common Data Representation	17
	References	20
Chapter 2	CIM Basics—Concepts and Models	21
	Object-Oriented Modeling	21
	The Purpose of OO	21
	CIM Concepts and Terminology	27
	Schema	28
	Classes	31
	Superclasses and Subclasses	33
	Domain, Range, and Type	34
	Properties	41
	Methods	41
	Associations and References	41
	Indications	43
	Qualifiers	44
	Override	44
	Naming and Keys	45
	References	46

Chapter 3	Schema Design Concepts	49
	Modeling	49
	What Is a Model?	49
	Models as Maps	52
	Modeling Techniques, Tools, and Methods	60
	Design Process	63
	Relational Models	64
	General Goals of Relational Design	64
	Constraints of the Relational Model	68
	Object Models	71
	References	74
Chapter 4	The Core Model	75
	Overview of the Core Model	75
	Modeling Methodology	76
	The Core Model	79
	Manageable Components	80
	Logical and Physical Split	84
	Consumable Capability within a System	86
	Configurations	89
	Products	91
	Common Operations	92
	Summary	92
	References	93
Chapter 5	System and Device Models	95
	Purpose of the System and Device Models	95
	System Methodology and Design Patterns	97
	System Names	99
	Device Methodology and Design Patterns	102
	Device Connections and Associations	104
	A Sample Computer System and Its Devices	107
	Classes, Associations, and Attributes	110
	CIM Systems	110
	CIM Cluster and Boot Services	114
	Operating Systems, File Systems, and Files	115
	CIM Devices	118
	Modeling Storage	121
	Modeling Controllers and Network Adapters	125
	Redundancy	129
	Subtyping and Extending the Models	131

	Past and Future of the System and Device Models	132
	Physical Aspects of Systems and Devices	133
	References	133
Chapter 6	The Physical Model	135
	Goals of the Physical Model	135
	Methodology and Design Patterns	136
	Naming Physical Elements	139
	Common Questions	139
	A Sample Enclosure	141
	Classes, Associations, and Attributes	142
	CIM Physical Packages and Locations	142
	Physical Capacity	146
	Physical Components	148
	Subtyping and Extending the Model	148
	Past and Future of the Physical Model	148
	References	150
Chapter 7	Common Model for Applications	151
	Managing Distributed Applications	151
	Application Fundamentals	152
	Application Life Cycle	154
	The Common Model	155
	Simple Application	156
	User/Administrator Friendly Application Parts	160
	Multiplatform Applications	162
	Describing Operating System Dependencies	163
	Dependencies on Other Applications	169
	Incompatibilities	172
	Business Systems	172
	Common Operations	172
	Summary	173
	References	174
Chapter 8	Emerging Models	175
	Networks: Beyond the Desktop	176
	User and Security: Roles of Man and Machine	178
	Policy and Service Level Agreements (SLAs): Controlling the Enterprise	178
	Database: Managing the Data Warehouse	180

	Distributed Application Performance (DAP): Monitoring the Applications	181
	Support: Bugs and Fixes	183
	Summary	184
Chapter 9	Steps in Schema Design	185
	Application Development Cycle	186
	Development Methodologies	189
	Program Development	189
	Schema Development	189
	CIM Schema Development	190
	Prototyping	190
	CIM Schema Design	191
	Overview	191
	Step 1: Identify Things and Their Properties	194
	Step 2: Generalize and Specialize	211
	Step 3: Add Semantics	218
	Step 4: Evaluate and Refine	223
	Interface Design	232
	CIM SQL	232
	Step 1: Identify Query Requirements	234
	Step 2: Identify Programmatic Query Requirements	237
	Step 3: Evaluate and Refine	241
	Physical Design	242
	Step 1: Identify Capacity Requirements	243
	Step 2: Identify Performance Requirements	245
	Step 3: Identify Operational Requirements	246
	Step 4: Evaluate and Refine	246
	The CIM Data Model: Beyond Systems Management	247
	The Mechanics of Schema Extension	248
	Restrictions	250
	References	253
Chapter 10	Analysis	255
	Classes	256
	Features	260
	Properties	261
	Associations	264
	Identifying Associations	264
	Refining Associations	265
	Types of Associations versus Types of References	268
	Methods	269

Chapter 11	Methods and Events	273
	Method Design Issues	273
	Passing Objects versus Passing Parameters	274
	Operations versus Functions	276
	Overriding and Polymorphism	276
	Fragile Base-Class Problem	278
	Designing Event Classes	279
	Event Representation	280
	Intrinsic Events	281
	Implementing Events	282
	Aggregation, Correlation, and Throttling	283
	References	284
Chapter 12	Implementation Theory	285
	Implementation Independence	285
	Implementation Model	288
	Processing Flow	289
	Data Interchange Engine Components	290
	Types of Exchanges	294
	Summary	297
	Index	299
