Foreword xv

Preface xvii

Acknowledgments xix

About the Authors xxi

About the Technical Reviewers xxii

Tell Us What You Think! xxiii

I Principles

1 The Prime Directive 3

Why Do Systems Need Administration? 4

Who Administers Linux Systems? 5

Titles and Roles 6

Overlapping Duties 8

The “Vendor” Documentation 9

Other Books 10

Linux System Administration on the Web 10

2 Requirements Analysis 11

The System Administrator’s Job Requirements 12

The Service-Level Specification 14

Initial Requirements Analysis 15

Ongoing Requirements Analysis 16

The Process 17

Implicit Requirements 18

Operational Analysis 20

Decisions and Recommendations 20

Further Study 21

- 3 Recovery Planning 23**
 - Restarting from Scratch 24
 - The Rescue Disk 25
 - The Rescue Root Partition 26
 - Partition Tables and Bootloader Code 27
 - Filesystems 29
 - System Documentation 31
 - Risk Assessment 32
 - Assess Costs and Consequences 36
 - Data Resources 36
 - The Easy Cases 39
 - Plan Recovery Strategies 40
 - Testing the Recovery Plans 40

- 4 Capacity Planning 43**
 - Monitoring 44
 - Diagnosis 48
 - Solutions 49
 - Overengineering 53
 - Personnel Capacities 53
 - Conclusion 53

- 5 Help Desk and Escalation 55**
 - Firefighting 56
 - Dispatch 56
 - Diplomacy 56
 - Reporting Systems 57
 - Evaluation, Prevention, and Documentation 59
 - Escalation Plan 59

- 6 Network Computing 61**
 - Architectural Objectives 62
 - Network Services Overview 64
 - Buzzwords 65
 - LINUX and Network Technologies 66

- 7 Security Policy 67**
 - Data Integrity 68
 - Ensure Availability 70
 - Protect Confidentiality 71
 - Enforcement 73

- II Practicum**

- 8 Enforcing Security 77**
 - Securing the Organization 78
 - Securing Systems 80
 - Exploits and Consequences 84
 - Breach Procedures 86
 - Current Information 86
 - Further Reading 87

- 9 Booting and Shutdown 89**
 - Booting 90
 - Shutdown 97
 - Further Reading 97

- 10 Configuring and Building Kernels 99**
 - Kernel Basics 100
 - Virtual Memory 102
 - The Process Scheduler 103
 - Network Support 104
 - Filesystem Support 105
 - Capabilities 107
 - Hardware Support 108
 - Configuring the Kernel 109
 - Compiling the Kernel 110
 - Installing the Kernel 111

- 11 Scripting 113**
 - The Shells 114
 - Common Utilities 114
 - Other Programming Languages 115

	Motivations for Scripting	115
	Log File Filtering and Aging	118
	Security	125
	Further Reading	126
12	Backups	127
	Assumptions	128
	Requirements and Policies	128
	System Features	130
	Application Considerations	131
	Systems Versus Data	131
	Media	133
	Testing	133
	Basic Utilities	134
	Using tar	135
	Using cpio	139
	NFS	141
	Using AMANDA	141
	Supporting Commands	142
	Other Backup/Restore Packages	144
13	Network Technologies	145
	The IP Protocol Stack	146
	IP Version 4	147
	IP Version 6	153
	LINUX Network Configuration	159
	Further Reading	160
14	System Profiles	163
	Clients	164
	Servers	164
	Unique Machines	165
	Documentation	165
	Partitioning Theory	165
	Partitioning Clients	170
	Partitioning Servers	170
	Conclusion	174
	Further Reading	174

15 Automated Installation and Upgrade 175

- Alternatives 176
- Hardware Issues 176
- Security 177
- Kickstart 177
- Implementing System Profiles 182
- Versioning 186
- Comparing Installs and Upgrades 186
- Further Reading 187

16 User and Group Administration 189

- Users and uids 189
- Groups and gids 190
- Adding Users 191
- Updating Users 191
- Deleting Users 191
- Disabling Users 192
- Shadow Passwords 193
- Password Aging 194
- Quotas 194
- Mail 194
- NIS 195
- Large Databases 195

III Services**17 Network Services 199**

- System-Level Services 199
- Application-Level Services 203
- Further Reading 205

18 Mail 207

- sendmail 208
- qmail 209
- Mail Service Structure 210
- procmail 211
- Spam 211

- Use Policies 212
- Troubleshooting Electronic Mail 213
- 19 Printing and Faxing 217**
 - lpr 218
 - Spool Directories 218
 - lpd 218
 - Administrative Commands 223
 - Adding a Printer 225
 - Print Server Configuration 225
 - Samba 225
 - Security 226
 - Diagnostics 226
 - Faxing 229
 - Further Reading 230
- 20 Working with NFS 231**
 - NFS Basics 231
 - User Id Mapping 233
 - NFS Server Processes 234
 - NFS and File Locking 234
 - The NFS Stateless Model 234
 - Debugging Techniques and Analysis Tools 235
 - Providing a Common File Hierarchy 237
 - Security 239
 - Further Reading 239
- 21 Managing NIS 241**
 - NIS Client Processes 242
 - NIS Server Processes 243
 - Custom NIS Data 244
 - Implementation and Interoperability 244
 - Configuring NIS for High Availability 245
 - Debugging Techniques and Analysis Tools 246
 - NIS Alternatives 246
 - Further Reading 247

IV Appendix

A Emergencies 251

Lost Root Password 251

I've Been Hacked! 255

Boot Troubles 255

Program Launch Troubles 261

Filesystem Troubles 264

Accidental Recursive chown/chmod of .. 266

Network Problems 267

Input Problems 268

Miscellaneous 269

More Places to Look for Aid 270

Glossary 271

References 295

Index 297
