Charles N. Thurwachter, Jr.

Contents

Chapter 1	Fundamental Concepts	1
	Data Communications Equipment, Data Terminal Equipment, and Communications Channel	2
	Hard and Soft Communication Channels	3
	Analog and Digital Signals	3
	Simplex and Duplex Systems	6
	Baseband and Broadband Signals	6
	Hertz and Radians	8
	Modulate	8
	Modulating Signal and Modulated Signal	9
	Carrier Wave	10
	Modulators and Demodulators	11
	Transmitters and Receivers	12
	Signal-to-Noise (S/N) Ratio	13
	Decibels, Part 1	14
	Gain and Attenuation	15
	Decibels, Part 2	17
	Interface Standards	21
	Troubleshooting Interface Standards	21
	EIA-232-D	21
	Ground Circuits	23
	Data Circuits	24
	Control Circuits	24
	Timing Circuits	26

	EIA-449	26
	EIA-530	26
	V.35	28
	Troubleshooting Interface Cables	29
	Problems	31
Chapter 2	Electromagnetic Signals	33
	Electromagnetic Spectrum	34
	Frequency and Wavelength	35
	Dielectric Constant, Velocity Factor, and Velocity of Propagation	39
	Frequency Standardization	43
	Bandwidth	44
	Bandwidth and Information Capacity	44
	Bandwidth and Carrier Frequency	45
	Frequency Bands	47
	Propagation Modes	50
	Ground Wave Propagation	50
	Sky Wave Propagation	50
	Line-of-Sight Propagation	51
	Power Radiation	53
	Field Intensity	54
	Summary	56
	Problems	56
Chapter 3	Metallic Media	59
	Metallic Conductors	59
	Skin Depth	61
	Wire Geometry and Fields	63
	Braided Shield	69
	Cable Connectors	71
	Cable Grounding	72
	Cross Talk	73
	Cable Choices	75
	Coaxial Cable Attenuation with Frequency and Length	75
	Twisted Pair Cable Attenuation with Frequency	77
	Standing Waves	77
	Wiring Standards	83
	Category 1	83
	Category 2	84
	Category 3	84
	Category 4	84
	Category 5	84
	Enhanced Category 5	85
	Plenum Cable	85

	Cable System Structure	86
	Troubleshooting with a Time Domain Reflectometer	87
	Single-Ended and Differential Signaling	88
	Unbalanced Circuits	89
	Balanced Circuits	89
	Noise Reduction through the Use of Balanced Configuration	90
	Attenuator	91
	Matching Using Transformers	93
	Baluns	94
	Connectors	95
	Coaxial Connectors	95
	F-Connector	95
	RCA Plug and Jack	95
	BNC Connector	96
	SMA Connector	97
	N-Connector	97
	Amphenol Connector	99
	Telephone-Style Connectors	100
	RJ-11	100
	RJ-14	101
	RJ-22	101
	RJ-45	101
	RJ-48	102
	Basic RJ Cable Troubleshooting	103
	Problems	103
Chapter 4	Optical Media	105
	Spectrum	105
	Advantages of optical media	107
	Disadvantages of optical media	108
	Index of Refraction	109
	Numerical Aperture	110
	Total Internal Reflection	111
	Dispersion	112
	Fiber Construction	113
	Optical Fiber Specifications	115
	Core Construction	115
	Glass Fibers	116
	Plastic fiber	117
	Size	117
	Attenuation	118
	Wavelength	119
	Bandwidth	120
	Fiber Cable Connectors	121
	Optical Light Sources	123

	LED (Noncoherent) 123
	Laser Diode (Coherent) 123
	Optical Detectors 125
	Photodiode and Phototransistor 125
	PIN Diode 125
	Avalanche Diode 126
	Fiber Application: 126 SONET 127
	Infrared Application: Remote Control 128
	Opto-Isolation 129
	Troubleshooting Optical Fibers 129
	Summary 130
	Problems 131
Chapter 5	Antennas 133
	Terms and Definitions 133
	Radiation Pattern 134
	Polarization 136
	Antennas and Electromagnetic Radiation 137
	Radiation Resistance 139
	Effective Radiated Power (Gain) 140
	Bandwidth and Quality Factor (Q) 143
	Ground Location 143
	Determining Antenna Length 144
	Some Common Antenna Types 146
	Half-Wave Dipole 146
	Folded Dipole 147
	Quarter-Wave Antenna 148
	Array Antennas 149
	Parasitic Array and Yagi Antennas 149
	Log-Periodic Array 152
	Loop Antennas 157
	Helical Antennas 158
	Parabolic Antennas 160
	Application Study: FM Antennas 161
	Summary 168
	Problems 169
Chapter 6	Signal and Fourier Analysis 171
	Time and Frequency Domain 171
	Even and Odd Functions 174
	General Form of Fourier Series 176
	Pure Sinusoidal Wave 177
	Square Wave (50% Duty Cycle) 177
	Pulsed Wave (Non-50% Duty Cycle) 177
	DC Biased 178

Sin (x) Over x	181
Triangle Wave	181
Even Functions	183
Power in a Waveform	185
Band-Limiting	188
Rise Time and Bandwidth	190
Harmonic Distortion	191
Pulse Shapes	194
Line Codes	196
Summary	198
Problems	199

Chapter 7	Amplitude Modulation	201
	Double Sideband, Suppressed Carrier (DSB-SC) Amplitude Modulation	201
	Sidebands	205
	DSB-SC Average Power	207
	Double Sideband, Large Carrier (DSB-LC) Amplitude Modulation	208
	Modulation Index	211
	DSB-LC Average Power	212
	DSB-LC Transmission Efficiency	216
	Relating Oscilloscope Readings of the Modulated Waveform to E_m and E_c	218
	Single Sideband (SSB) Modulation	222
	Vestigial Sideband (VSB) Modulation	225
	Signal-to-Noise (S/N) Comparison	228
	DSB-SC S/N	228
	DSB-LC S/N	229
	SSB S/N	229
	Summary	230
	Problems	231

Chapter 8	Amplitude Modulation and Demodulation	233
	Passive Mixers	234
	Summer and Splitter	237
	Amplitude Modulator Circuits	239
	SSB Modulators	241
	Transmitters	242
	Heat Sink Design	245
	Demodulation	246
	Voltage Controlled Oscillator	248
	Phase-Locked Loop	248
	DSB-SC Demodulator	250
	Pilot Tone Demodulation	251
	DSB-LC Demodulation	252

	Envelope Demodulation	253
	Ripple Distortion	254
	Choosing the Resistor and Capacitor	256
	Rectifier Distortion	258
	Superheterodyne Demodulator (Dual Conversion)	259
	Crystal Detector	262
	Automatic Gain Control (AGC)	262
	Summary	265
	Problems	266
Chapter 9	Angle Modulation and Demodulation	267
	Amplitude and Frequency Modulation Comparison	267
	Angle Modulation	268
	Frequency Deviation, Part 1	269
	Deviation Sensitivity	269
	Modulating Signal	270
	Frequency Deviation, Part 2	271
	Bandwidth of Angle Modulated Signals	275
	Narrowband and Wideband Systems	278
	Large Modulation Indexes	280
	Voltage, Current, and Power	280
	Percentage Modulation	284
	Modulators	284
	Direct FM and PM Modulation	285
	Indirect FM Modulation	286
	Broadcast FM Radio	287
	Noise Considerations for Angle Modulation	289
	Preemphasis and Deemphasis	291
	Demodulators	292
	Direct Discrimination	293
	Indirect Discrimination	295
	Cordless Telephone	296
	Cellular Radio	297
	Summary	303
	Problems	304
Chapter 10	Pulse Modulation	305
	Sampling Theory	305
	Aliasing	309
	Pulse Amplitude Modulation	311
	Analog and Digital Comparison	314
	Pulse Code Modulation	316
	Quantization Error	316
	Nonuniform Quantization	320
	Code Word Length	323
	Quantization Error	323

	Quantization Noise	324
	PCM Bandwidth	324
	Companding	326
	Dynamic Range	328
	PCM Power	330
	PCM Integrated Circuit Naming Conventions	332
	Differential Pulse Code Modulation and Adaptive Differential Pulse Code Modulation	333
	Delta Modulation, Adaptive Delta Modulation, and Continuous Variable Slope Delta Modulation	333
	Pulse Width Modulation (PWM) and Pulse Position Modulation (PPM)	336
	Summary	338
	Problems	338
Chapter 11	Multiplexing	341
	TDM and FDM	342
	TDM	343
	TDM in the Telephone System	345
	Clear Channel Capacity	346
	Superframes	348
	Add/Drop Multiplexing (Grooming)	350
	STDM	354
	FDM	355
	Wavelength Division Multiplexing (WDM)	358
	Code Division Multiple Access (CDMA)	360
	SDM	362
	Summary	364
	Problems	365
Chapter 12	Coding	367
	Channel Codes	368
	Block Codes	368
	Parity	369
	Hamming Codes	370
	Variable-Length Channel Codes	376
	An ARQ Protocol Error Detection Code, CRC Codes	377
	Summary of Channel Encoding	381
	Source Encoding	381
	ASCII Code, a Block Source Code	383
	Variable-Length Source Codes	384
	Code Trees	386
	Huffman Codes	389
	Summary of Source Coding	391

	Combined Example	391
	Scrambling	392
	Trellis Coded Modulation (TCM)	393
	Codes Used to Enhance Security, and Cryptography	394
	Problems	397
Chapter 13	Digital Modulation	399
	Information Capacity	400
	Bandwidth of Digital Signals	400
	Shannon's Limit	403
	FSK	406
	Bandwidth of FSK signals	406
	Noncoherent FSK Modulation	409
	Noncoherent FSK Demodulation	412
	Coherent FSK Modulation (MSK)	413
	Coherent FSK (MSK) Demodulation	414
	PSK	415
	Binary PSK (BPSK)	415
	BPSK Modulator	417
	BPSK Demodulator	417
	Bandwidth Considerations of BFSK and BPSK	418
	Bandwidth Efficiency	418
	Symbol and Baud Rate	420
	Di-bits, Tri-bits, and M-ary encoding	421
	QPSK	421
	QPSK Modulator	422
	Constellation Diagram	423
	QPSK Demodulator	425
	Carrier Recovery	427
	Eight-ary PSK	429
	Quadrature Amplitude Modulation (QAM)	429
	Sixteen-ary QAM	430
	Carrier-to-Noise Ratio	431
	E_b/N_o Calculations	432
	Bit Error Rate (BER) Calculations	435
	Summary	439
	Problems	440
Chapter 14	Open System Interconnection Model	443
	Layering	445
	Service Access Point (SAP)	446
	Service	446
	Virtual Communications	447
	Operation Primitives	448
	Services versus Protocols	450
	Protocol Data Units	450

	Service Classes	451
	COS	452
	CLS	452
	Physical Layer (Layer 1)	454
	Data Link Layer (Layer 2)	455
	Data Link Access Methodologies	456
	CSMA/CD	457
	Token-Passing Bus	458
	Token Ring	461
	Scheduled Operations	462
	Efficiency	463
	Medium Access Control Sublayer	463
	Logical Link Control Layer	466
	Network Layer (Layer 3)	468
	Transport Layer (Layer 4)	469
	Session and Presentation Layers (Layers 5 and 6)	471
	Application Layer (Layer 7)	471
	Summary	472
	Problems	473
Chapter 15	Networking Hardware	475
	Size and Data Rate	475
	Topology	478
	Star Topology	478
	Ring Topology	479
	Bus Topology	480
	Tree Topology	481
	Daisy Chain Topology	482
	LAN Hardware	483
	Tap	483
	Basic Hubs	483
	Repeaters	484
	Port Switching Hub	484
	Bridges	486
	MAC Bridge	489
	LAN Switches and Layer 2 Switches	490
	VLAN (Virtual LAN)	491
	Protocol Converter	493
	Routers	495
	Gateways	502
	Communication Processors and Controllers	503
	LAN Attachment	505
	Typical 10Base-T and 100Base-T LAN	506
	Troubleshooting	506
	Hardware Problems	507

Software Problems	508
NIC Card Troubleshooting	509
HUB Troubleshooting	509
Summary	510
Problems	510

Chapter 16	Telecommunications	511
	Local and Long Distance Providers	511
	Two-Wire and Four-Wire Interfaces	513
	Voltages	514
	Dual Tone Multifrequency	515
	Call Progress Tones	517
	Switching Station Hierarchy	517
	Switching Station Switch	519
	Feature Groups	520
	Dialing and Number Plans	521
	Switched Lines	522
	Dedicated Lines	526
	56 kbps of data in a 64 kbps Channel	527
	Multidrop Lines	527
	Multipoint DDS lines	528
	Components	529
	Modem	529
	Limited-Distance Modem	529
	CSU and DSU	529
	PBX	531
	66-Block	532
	Channel Banks	533
	Line Coding	535
	Telephones, PBXs, and Trunk Bandwidth Calculations	536
	Switching	539
	Circuit Switching	539
	Packet Switching	539
	ISDN	540
	Service Characteristics versus Architecture	540
	End-to-End Digital Connectivity	541
	Standard Terminal Interface	541
	ISDN Line Codes	544
	Comparison of Circuit-Switched Systems Signalling	
	Protocols	545
	Signalling System Seven (SS7)	547
	Interoffice Network	551
	X.25 Virtual Circuits	554

	Summary	555
	Problems	555
Chapter 17	Three Protocols	557
	FieldBus	557
	FieldBus Architecture	558
	Ethernet	563
	10Base 2	566
	10Base 5	567
	10Base-T	569
	10Base-FL	569
	Troubleshooting 10BASE-T	570
	Fast Ethernet Family	572
	TCP/IP	573
	Relation to OSI Model	573
	Internet Protocol (IP)	577
	Subnet Addressing	581
	Process Layer	582
	FTP	582
	SMTP	582
	TELNET	583
	SNMD	583
	Summary	585
Appendix A	Fourier Series	587
Appendix B	Sampling Theory and the FFT	589
Appendix C	Derivation of Transmission Efficiency	591
Appendix D	Calculation of the Minimum-Value Time Constant in Envelope Demodulate	592
Appendix E	Relationship Between Phase and Frequency	595
Appendix F	E-1 Framing and Wire Line Standard	602
Appendix G	Detailed Modulo-2 Division Used for CRC Calculations	603
Appendix H	802.X Frame Formats	608
Appendix I	FieldBus Timed Standard Scanning Example	613
Appendix J	Additional Cabling Detail for the Coaxial Ethernet Family of Standards	614
Appendix K	IP Datagram Format	615
	Glossary	617
	Index	623
