

PROFESSIONAL Linux Deployment

Suranaree University of Technology

Integrating Linux into your NT/UNIX Network Architecture

Ganesh Prasad, Geoff Sherlock, Mike Boerner, Mark Wilcox,
Jonathan Kelly, Jonathan Pinnock, Ian Dickson, Richard Ollerenshaw,
Mike Banahan, Joel Rowbottom, Nikhilesh Kumar Mandalay

Table of Contents

Introduction	1
Chapter 1: Linux in the Enterprise	7
The History Of Linux	8
The GNU Project and the Free Software Foundation	8
The Importance of the GNU General Public License	8
Free or Open-source?	9
Degrees of Freedom	9
The Last Piece in the Puzzle	10
UNIX is Back	11
What Does Linux Hold For Me?	11
An Analysis of Linux	12
The Arguments for Linux	12
Zero Price Point	12
Do-it-yourself Flexibility	13
Freedom From Licensing Headaches	14
Stability	15
Performance	17
Standards Compliance	19
Diverse Hardware Support	20
Interoperability With Existing Systems	21
Virus-proof Design	22
Strong Cryptography Worldwide	23
The Arguments Against Linux	25
User-unfriendliness	25
Installation Problems	27
Scarcity of Applications	28
Poor Documentation	31
Lack of High-end Features	32
Security Concerns	33
Lack Of Support	35
Absence Of Legal Recourse	35

Lack of Ownership	36
Uncertain Roadmap	37
The Shape of Things to Come	37

Chapter 2: Integrating Windows and Linux using Samba 39

Samba Concepts	40
System Requirements	41
Getting and Installing Samba	41
A Note about Upgrades	41
Locating the Source	42
Compiling and Installing	42
Doing a Binary Installation	44
Running Samba	45
Starting Samba with inetd	45
Starting Samba through a Script	46
Getting Answers to Problems	48
Samba Security	49
Configuring Samba: a Tour of smb.conf	51
Using Samba as a Primary Domain Controller	56
Samba Components	57
Swat	61
Clients for a Samba Server	63
The Windows Operating Systems	63
Linux	64

Chapter 3: Case Study: a Linux Workgroup Server 71

Introduction	71
File and Print Serving	72
Setting up the Shares	72
Fax Serving	76
Fax Serving — Integration with Samba	81

The Live Backup Server	84
Deployment	87
Chapter 4: Linux, The Internet, and Free Software	93
"iFreeSoft"	94
Why Do They Do It?	94
How Can It Pay?	95
The Web as a Platform	95
The Importance of Open Standards	96
The Internet Protocols	96
TCP/IP: The Backbone of the Internet	97
Routers and Routing	97
The Linux Router Project	97
Domain Name Servers	98
HTTP and the Web	98
Apache: The World's Most Popular Web Server	98
The Mozilla Project: The Web's Battle of the Bulge	99
WebDAV: Moving The Web from Read-Only to Read/Write	100
Electronic Mail	100
Web-based E-mail	101
Mailing List Managers	101
Firewalls and Proxies	101
Database Servers	102
LDAP and Directory Servers	103
Web Application Servers	103
Chapter 5: Deploying Web and FTP Servers	107
Deploying the Apache Web Server	108
System Requirements	109
Preparing Linux for Installation	109
Installing Apache Web Server	110
Getting to Know the Web Server	112

Configuring Your Web Server	112
Global Environment	113
Primary Server Configuration	114
Adding Virtual Hosts	117
Network Configuration	117
Apache Configuration	118
Technologies for Effective Sites	119
Server-Side Includes	119
Common Gateway Interface	121
mod_perl	122
Java Servlets	123
Java Server Pages	125
Logs and Analysis	125
Manual Logfile Analysis	126
Automatic Analysis	127
Deploying an FTP Server	130
Installing WU-FTP	130
Configuring WU-FTP	131
Making your Servers Persistent	133

Chapter 6: Building a Data-Driven Web Site: E-commerce with Linux 137

The Cunning Plan	138
How the Site Should Work	139
Software Choices	140
Operational Details	142
Client-side Validation	143
Server-side Code Selection	143
HTML Generation	144
Checking our Homework	146
The Database	147
Session Management and Tracking	149
Cookies	149
Embedded Links	150

Site Tricks and Tactics	155
Dealing with Search Engines	156
External Links	156
Gathering Statistics	157
Overall Experience	160

Chapter 7: Using Database Applications with Linux 163

The Case for Linux as your Database Server	163
A Non-Commercial Database on Linux: MySQL	167
Features of MySQL	167
Standards Supported	167
Language Support	167
Programming Language APIs for Clients to Access the Database	167
Speed, Robustness and Ease of Use	168
Cost Advantage	168
Installing MySQL on Linux	168
Software and Hardware Requirements	169
Installation from RPMs	169
Installing from a Binary Distribution	170
Administering MySQL on Linux	171
Starting the Database Server	171
Getting the Status of the Database Server	171
Shutting Down the Database Server	172
Database Creation	172
Database Destruction	173
Security and Access Control	173
Creating Users	176
Backup and Recovery	177
The Replication or Stand-by Database	178
Table Maintenance	179
Tuning the Database Server	180
Important MySQL Utilities	181
Unsupported Features in MySQL	182

PostgreSQL	185
Where to Find PostgreSQL	185
Installation	186
Postmaster	188
Automatic Startup	188
Using Databases	189
Transactions	193
Administration	193
A Commercial Database On Linux: Oracle 8	195
Oracle versus the Free World	195
Installing Oracle 8 On Linux	195
Configuring and Customizing Oracle on Linux	196
Setting A Common Set Of Environment Variables For Users	197
Tweaking Oracle Environment Variables	197
Tuning Oracle on Linux	198
Monitoring Tools on Linux	198
Disk or I/O Performance	198
Memory Management	198
Process Priority	199
File System Tuning	199

Chapter 8: Using Directory Services and LDAP **201**

Directories	202
Problems and Solutions	202
Single Sign-on	202
Certificate Management	203
Computer Resource Management	203
Address Books	204
Directories Versus Databases	204
Examples of Directories	204
The Telephone Directory	204
The Domain Name Server	205
X.500	205
NT/Active Directory	206
Novell Directory Services	206
NIS/NIS+	206

Lightweight Directory Access Protocol	207
LDAP Fundamentals	207
Information Model	208
Naming Model	209
Functional Model	209
Security Model	210
What Can I Do With LDAP?	212
White Pages Service	212
User Authentication	212
Replace Other Directory Services	213
LDAP Tools	213
LDAP Installation on a Linux Server	214
Open Source	214
Proprietary Applications	214
Working with LDAP	214
Installing OpenLDAP	214
Loading the Server	215
LDAP Command Line Tools	216
Testing the Server	218
Programming LDAP	219
Installing Net::LDAP	219
Installing Perl Modules	219
Search Parameters	220
LDAP Search Base	220
Determining LDAP Scope	221
LDAP Search Filters	222
Searching with Net::LDAP	223
Adding an Entry	224
Modifying an Entry	226
Removing an Entry	227
Accessing LDAP Data from a Web Browser	228
LDAP URLs	228

Chapter 9: Linux as an Internet Gateway	233
Gateway Configurations	234
The Link — Dial-up or a Leased Line	235
Point to Point Protocol	236
Setting up Routing	245
Considerations for Connecting to the Internet	246
Setting up Domain Name Resolution	248
Sendmail	255
Getting Sendmail	256
Configuring Sendmail	258
Sendmail and Avoiding Spam	265
Using Different Mail Clients	266
Installing the IMAP Server	267
Fetchmail and Other Alternative Mail Programs	269
 Chapter 10: Configuring Linux as a Firewall and Proxy	 273
Introduction	273
Firewalls	274
Preparing Linux	276
The ipchains Concept	276
Basic Firewall	277
Packet Logging	278
Web & Outgoing Mail Services	279
Intranet Server	281
The Bastion Server	282
Restricting User Access	284
The TIS Firewall Toolkit	285
Proxies	289
Cache in Hand	289
Using Apache as a Cache	289
Squid Proxy Server	290
Configuring Squid	291
Starting Squid	292
Client Configuration	293
More about Access Control Lists	293
Logging Proxy Requests	294

Chapter 11: Cryptography and the Linux Connection	299
A Simple Example of Cryptography	299
The Concept of a Key	300
Keys and Algorithms	300
The Problem with Single-Key Encryption	301
How Dual-Key Encryption Solves the Problem	302
A Simple Example of Dual-Key Encryption	302
Public Key Cryptography	303
Notation	304
Message Integrity and Checksums	305
Clearsigning, Legal Documents and Non-Repudiation	307
Digital Certificates	308
PGP (Pretty Good Privacy)	309
GnuPG (GNU Privacy Guard)	310
Downloading and Installing GnuPG	310
GnuPG Quick Reference	311
Key Generation	312
Exchanging Public Keys	313
Signing and Verification	315
Encryption and Decryption	319
Building a Web of Trust	320
Incorporating PGP/GnuPG into an E-mail Client	324
SSL (Secure Sockets Layer)	325
The Problem with Commercial Web Servers	326
Apache-SSL	327
Configuring Your Own Secure Web Server	327
IPSec	331
FreeS/WAN	331
An IPSec-based VPN using FreeS/WAN on Linux	332
Compilation	333
Configuration and Testing without FreeS/WAN	334
Incorporating FreeS/WAN	335
Configuring with FreeS/WAN	336
Testing the VPN	337
The RSA and Diffie-Hellman algorithms	338

Chapter 12: Distributed Systems in the Linux Environment	341
The Concept of a Distributed System	342
How Distributed Computing Helps	342
An Ideal Distributed System	343
Definitions	344
The Advantages and Disadvantages of Distributed Systems	345
Advantages	345
Disadvantages	348
Individual User Workstations	349
Faster Chips	349
Low Utilization of Uni-Processor Systems	350
Maximizing the Use of Existing Resources	351
Flexibility of Application Movement	351
Determining System Requirements	352
Create a Plan	352
Which Architecture to Use	353
The Objective of the Distributed System	354
The Type of Distributed System that Meets your Needs	354
Resource Control	355
Determining the Resource Utilization of the Present System	355
Scaling to Fit	357
Components of a Distributed System	358
Key Components	358
CPUs and Their Hardware	358
Communication	359
Operating System	359
Applications Capable of Utilizing Multiple Processors	359
Other Factors to be Considered	360
More on Communications	360
Concurrency	361
Avoid Over-Centralization	361
Storage Space	361
Hardware Considerations	361
Programming Languages	362
Design and Implementation	362
Maintenance	362
Other Factors	362

Hardware Decisions	363
The Central Processor Unit (CPU)	364
Alpha	364
PowerPC	365
SPARC	365
X86	366
Single Processors vs Symmetric Multi-Processors (SMP)	367
Individual	367
Multiple Processors	368
Networking Issues	369
What Affects Efficiency	370
Specific Comparisons	371
Other Factors	373
Corporate Culture	373
Budgets and Limitations	374
Users	375
Complete Control	375
Node Configurations	377
Diskless Systems	377
Disked Systems	380
Hybrid System	382
High Capacity Storage	383
Server Support — General Duty Servers	383
Domain Name Server	383
Linux — The Operating System of Choice	384
Which Linux Version and Distribution	384
Background	385
Research Phase and Decisions	385
Selection Factors	385
CPU and Motherboards	386
Memory	386
Network Components	387
Video Subsystems	387
Node Access and Control	388

The Cluster System	388
Server — Code Name Alpha	388
Nodes	390
Machines 1-4	390
Machines 5-8	391
Configuration of the Nodes	392
Installation of Linux on the Server	392
Installation of Linux on Nodes	392
Configuration of Client and Server	393
Fixed IPs	393
Drive Partitions	393
Network Configuration	394
General Configuration	395

Chapter 13: Implementing Distributed Systems 403

Distributed Application Development Tools	404
Message Passing Interface (MPI)	404
Underlying Concepts	405
Advantages	405
Disadvantages	406
Applications	406
Installation of MPICH	406
Configuration	407
Sample Code and More Configuration	408
Thorough Testing	410
Parallel Virtual Machine (PVM)	412
Underlying Concepts	412
Advantages	412
Disadvantages	413
Applications	413
Installation of PVM	413
Configuration	414
Compiling and More Configuration	415
Testing	415
Remote Procedure Calls (RPC)	416
Advantages	417
Disadvantages	417

Other Technologies	417
Distributed Computing Environment (DCE)	417
CORBA	417
DCOM on Linux	418
Case Studies Involving Distributed Applications	418
Supporting Applications	418
Domain Name Server	418
Apache Web Server — Case Study	419
Multiple Server Configuration	419
Objectives	419
Configuration	420
DNS Configuration for Round-Robin	422
Distribution Tools	423
Sybase Database Server — Case Study	426
Acquisition and Installation	426
Configuring the Database	428
Configuring the Backup Server	430
Configuring Server Products	430
Testing	431
Multiple Server Configuration	432
Oracle	435
Replication	436
Installation	437
Configuration	437
Multi-Master Replication	440
Chapter 14: EntireX — DCOM on Linux	443
Living With Bill	443
The Shortest Introduction to COM and DCOM Ever	444
Objects, Properties, Methods	444
COM	445
Alien DCOM	447
The Linux DCOM Environment	447

A Hybrid Example	449
Defining the Interface	449
The Joy of Visual Studio	450
Creating the Linux Server	451
Creating the Windows Client	470
Reversing the Roles	471

Chapter 15: Case Study: Migrating to Linux **473**

Overview	473
Considerations for Moving Infostat to Linux	474
Linux and x86 Based Systems	474
Early Linux Kernels May Not See All of the Memory	475
Performance of Intel Based Servers	475
The Linux Project	476
Networking Linux	477
Network Configuration	477
Porting the Application	479
Reading the Tapes	479
Setting up the System	480
The GNU Project C and C++ Compiler	481
Starting the Database	483
Using The GNU Project Debugger	484
Enabling the Front End Applications	485
Network Printing on Linux	486
Configuring the Linux Print Spooler	486
Remote UNIX (LPD) Queue	487

Appendix A: Linux 101 **491**

UNIX Philosophy	491
A Box of Simple Tools	492
Users Know What They're Doing	492
Multiprocessing, Multi-user	493
The Linux Way	493

Getting to Know Linux	495
Understanding "X-Windows"	495
Logging In	496
The Shell	497
A User's View of Linux	500
The Layout of Files and Directories	501
File and Directory Naming	505
File Permissions	507
Global and Customized Settings	512
The Administrator's View of Linux	514
Devices	514
Other File Types	515
Mounting File Systems	516
Maintaining Integrity	518
Run Levels	518
Shutting Down the System	519
File and Directory Manipulation Commands	519
 Appendix B: Linux Commands and Utilities	 525
Information Commands	525
Linux Building Blocks	529
Processes and Job Control	533
Running Programs Automatically	542
Regular Expressions	543
Locating Files	546
Editors	548
 Appendix C: System Administration	 555
Disk Partitioning	556
Running Scripts and Environment Variables	559

General Housekeeping	562
Commands Dealing with Users	562
Automating Administration Tasks	563
Dealing with Specific Problems	569
Data Archiving and Compression	575
System Backup and Restoration using the tar Utility	577
General Linux Configuration	583
Adding Users	585
Starting Processes at Boot-up Using /etc/inittab	588
Running Scripts at Boot-up and Shutdown	589
Network Configuration	589
Configuring and Compiling the Kernel	601
Upgrading the Kernel	601
Installing a New Kernel Source	602
Patching an Existing Linux Kernel	603
Preparing and Configuring the Kernel	603
Compiling the Kernel	607
Restoring a Kernel	608
Updating Applications using RPM and FTP	609
Using Red Hat Package Manager (RPM)	609
Other Useful Specifications for RPM	617
Using FTP to Automate Application Updates	619
Other Information	620
Configuration Options Available with Linuxconf	620
Printer Capabilities	622

Appendix D: Support and Errata

625
