Welcome to Designing and Implementing Databases with Microsoft SQL Server 7.0	v
Before You Begin	vi
Using the MCSE Readiness Review	viii
Getting More Help	xvi

Objective Domain 1: Developing a Logical Data Model 1

Objective 1.1: Group data into entities by applying normalization rules.	3
Objective 1.2: Identify primary keys.	17
Objective 1.3: Choose the foreign key that will enforce a relationship between entities and that will ensure referential integrity.	31
Objective 1.4: Identify the business rules that relate to data integrity.	45
Objective 1.5: Incorporate business rules and constraints into the data model. ...	61
Objective 1.6: In a given situation, decide whether denormalization is appropriate.	75

Objective Domain 2: Deriving the Physical Design 85

Objective 2.1: Assess the potential impact of the logical design on performance, maintainability, extensibility, scalability, availability, and security.	89
---	----

Objective Domain 3: Creating Data Services 103

Objective 3.1: Access data by using the dynamic SQL model.	107
Objective 3.2: Access data by using the stored procedure model.	121
Objective 3.3: Manipulate data by using Transact-SQL cursors.	135
Objective 3.4: Create and manage explicit, implicit, and distributed transactions to ensure data consistency and recoverability.	149
Objective 3.5: Write INSERT, DELETE, UPDATE, and SELECT statements that retrieve and modify data.	163
Objective 3.6: Write Transact-SQL statements that use joins or subqueries to combine data from multiple tables.	179
Objective 3.7: Create scripts by using Transact-SQL.	193
Objective 3.8: Design, create, use, and alter views.	209

Objective 3.9: Create and execute stored procedures to enforce business rules, to modify data in multiple tables, to perform calculations, and to use input and output parameters.	221
Objective 3.10: Create triggers that implement rules, that enforce data integrity, and that perform cascading updates and cascading deletes.	237
Objective 3.11: Create result sets that provide summary data.	251
Objective 3.12: Configure session-level settings.	267
Objective 3.13: Access data from static or dynamic sources by using remote stored procedures, linked servers, and OPENROWSET.	277

Objective Domain 4: Creating a Physical Database 289

Objective 4.1: Create and manage files, file groups, and transaction logs that define a database.	293
Objective 4.2: Create tables that enforce data integrity and referential integrity.	307
Objective 4.3: Create and maintain indexes.	321
Objective 4.4: Populate the database with data from an external data source.	335
Objective 4.5: Implement full-text search.	349

Objective Domain 5: Maintaining a Database 361

Objective 5.1: Evaluate and optimize the performance of an execution plan by using DBCC SHOWCONTIG, SHOWPLAN_TEXT, SHOWPLAN_ALL, and UPDATE STATISTICS.	365
Objective 5.2: Evaluate and optimize the performance of query execution plans.	381
Objective 5.3: Diagnose and resolve locking problems.	397
Objective 5.4: Identify SQL Server events and performance problems by using SQL Server Profiler.	413
