Technician's Guide to the 68HC11 Microcontroller

Black

Contents

1	Introduction to Computer Hardware	1
	Objectives	1
	Outline	1
	Introduction	2
	1.1 Elements of Every Computer	2
	1.2 Elements of Processors	6
	1.3 Introduction to Memory	12
	1.4 Memory Types	15
	1.5 Input/Output	16
	1.6 EVBU/BUFFALO	19
	Summary	23
	Chapter Questions	24
	Answers to Self-Test Questions	25
2	Introduction to Computer Software	27
	Objectives	27
	Outline	27
	Introduction	27
	2.1 Programming the Computer	28
	2.2 Memory Addressing Modes	32
	2.3 HC11 Addressing Modes	36
	2.4 Processing Instructions	42
	2.5 Program Flow	46
	Summary	48
	Chapter Questions	49
	Chapter Problems	50
	Answers to Self-Test Questions	50

3	HC11 Programming	53
	Objectives	53
	Outline	53
	Introduction	54
3.1	Condition Code Register Status Flags	55
3.2	Data Movement	56
3.3	Addition	64
3.4	Subtraction	70
3.5	Logic	74
3.6	Shifting and Rotating	77
3.7	Multiplication and Division	84
3.8	Status Flag Manipulation	87
	Summary	88
	Chapter Questions	88
	Chapter Problems	89
	Answers to Self-Test Questions	91
4	Branching and Loops	93
	Objectives	93
	Outline	93
	Introduction	94
4.1	Jumping	94
4.2	Branching and Relative Address Mode	95
4.3	Branch Instructions	100
4.4	Preparation for a Valid Branch Test	104
4.5	Conditional Flow Using IF-THEN-ELSE	107
4.6	Program Loops	111
	Summary	114
	Chapter Questions	114
	Chapter Problems	115
	Answers to Self-Test Questions	116
5	Indexing Through Memory	119
	Objectives	119
	Outline	119
	Introduction	119
5.1	Using Indexed Addressing	120
5.2	Summing a List of Numbers	124
5.3	Finding the Largest Number	128
5.4	Counting the Number of Positive Numbers	130
5.5	Copying a Block of Memory	131
	Summary	133
	Chapter Questions	133
	Chapter Problems	134
	Answers to Self-Test Questions	134

6	Subroutines	137
	Objectives	137
	Outline	137
	Introduction	137
	6.1 Temporary Storage Using a Stack	138
	6.2 Function of Subroutines	141
	6.3 Parameter Passing	145
	6.4 Converting a Hex Value to ASCII	148
	6.5 Nested Subroutines	150
	6.6 BUFFALO Subroutines	154
	Summary	157
	Chapter Questions	157
	Chapter Problems	158
	Answers to Self-Test Questions	159
7	Working with an Assembler	161
	Objectives	161
	Outline	161
	Introduction	161
	7.1 Writing Source Code	162
	7.2 Assembler Functions	165
	7.3 Listing Files	168
	7.4 "S" Records	169
	Summary	171
	Chapter Questions	171
	Chapter Problems	172
	Answers to Self-Test Questions	172
8	Memory Systems	173
	Objectives	173
	Outline	173
	Introduction	174
	8.1 Address Decoding	174
	8.2 On-chip Memory	177
	8.3 RAM	179
	8.4 EEPROM	182
	8.5 ROM	187
	8.6 System Registers	188
	8.7 Memory Expansion	190
	Summary	192
	Chapter Questions	192
	Chapter Problems	193
	Answers to Self-Test Questions	193
9	General Purpose I/O	195
	Objectives	195

Outline	195
Introduction	195
9.1 Port B—Output Only	196
9.2 Port C—Programmable I/O	197
9.3 Bit-Level Operations	199
9.4 I/O with Handshaking	205
9.5 General-Purpose I/O On Other Ports	210
Summary	212
Chapter Questions	212
Chapter Problems	213
Answers to Self-Test Questions	213
10 HCII Interrupts and Resets	215
Objectives	215
Outline	215
Introduction	216
10.1 Condition Code Register Control Bits	216
10.2 Servicing an Interrupt	217
10.3 Interrupt Control	222
10.4 Maskable Interrupts	225
10.5 Using Interrupts on the EVBU	230
10.6 Nonmaskable Interrupts	233
10.7 Resets	237
10.8 Servicing a Reset Interrupt	240
Summary	242
Chapter Questions	242
Chapter Problems	243
Answers to Self-Test Questions	243
11 Analog Capture—Port E	245
Objectives	245
Outline	245
Introduction	245
11.1 Theory of Analog Conversion	246
11.2 A/D Hardware	251
11.3 A/D Function	256
11.4 Example Using an LM34/35 Temperature Sensor	259
Summary	261
Chapter Questions	262
Chapter Problems	263
Answers to Self-Test Questions	263
12 Timed Events—Port A	265
Objectives	265

Outline	265
Introduction	266
12.1 Theory of Timed Events	267
12.2 Main Timer Functions	268
12.3 Input Capture	273
12.4 Output Compare	279
12.5 Pulse Accumulator	286
12.6 Real-Time Interrupts	291
Summary	293
Chapter Questions	293
Chapter Problems	295
Answers to Self-Test Questions	295
13 Serial Communication—Port D	297
Objectives	297
Outline	297
Introduction	297
13.1 Theory of Serial Communication	298
13.2 Serial Communications Interface	300
13.3 Serial Peripheral Interface (SPI)	310
Summary	314
Chapter Questions	315
Chapter Problems	315
Answers to Self-Test Questions	316
14 C Programming and the HC11	317
Objectives	317
Outline	317
Introduction	317
14.1 C Programming	318
14.2 Data Types	319
14.3 Operators	321
14.4 Variables	322
14.5 Special Statements	324
14.6 Subroutines	326
14.7 Examples	326
Summary	331
Chapter Questions	331
Chapter Problems	332
Answers to Self-Test Questions	333
Appendix A Computer Mathematics	335
Introduction	335
A.1 Number Systems/Conversions	335

A.2	Arithmetic	343
A.3	Signed Numbers (2's Complement Number System)	347
A.4	Binary-Coded Decimal	351
A.5	Numeric Notation	353
A.6	Multiprecision Arithmetic	354
Appendix B Booting from EEPROM		359
	Modifying the EEPROM Program to Include Initialization Code	359
Appendix C Loading Programs Directly into the EEPROM		361
	Procedure	361
	Changing the EVBU Jumper	362
Appendix D Acronym List		363
Glossary		371
Index		381
