

Read Less, Learn More™

Perl

*Your visual blueprint
for building Perl scripts*

**Perl 5.6.0 plus scripting
tools and more on CD-ROM!**

- Pearl2Exe trial, Perl Builder evaluation version, and other software tryouts
- Plus all code and examples from the book

Visit us at www.idgbooks.com

TABLE OF CONTENTS

HOW TO USE THIS BOOKxii

1) GETTING STARTED

Introduction to Perl	2
Using Pico	4
Create a Perl Script	6
Execute a Perl Script	8
Create a Self-Executing Perl Script	10
Using Command Line Options	12
Upload a Perl Script to a Web Server	14

2) WORK WITH VARIABLES

Using Strings	18
Using Numbers	20
Create a Scalar Variable	22
Manipulate a String Variable	24
Manipulate a Numeric Variable	26
Create an Array	28
Work With Arrays	30
Using Scalar Context	32
Using Special Variables	34

3) WORK WITH DATA

Trim a String	36
Find the Length of a String.....	38
Change Case of a Character or String	40
Divide a String.....	42
Format a String	44

Extract a Substring	46
Search for a Substring	48
Using Mathematical Functions	50
Work With Undefined Variables	52
Work With Time	54
Using ASCII Values	56
Evaluate Code	58

4) USING OPERATORS

Introduction to Operators	60
Using the Assignment Operator	62
Using Relational Operators	64
Using Arithmetic Operators.....	66
Using Logical Operators	68
Using the Conditional Operator	70
Using the Comma Operator	71
Using Bitwise Operators	72

5) CONTROLLING THE FLOW OF CODE

Test a Condition	74
Create a Loop	76
Process a List.....	78
Create a Conditional Loop.....	80
Using Statement Modifiers	82
Control Loop Processing	84
Exit a Script	86

6) USING LISTS, ARRAYS AND HASHES

Join List Elements Into a String	88
Assign a List to Another List	90
Using Elements in a List	92
Sort a List	94
Add and Remove Elements in an Array	96
Replace Elements in an Array	98
Create a Hash	100
Access Keys and Values in a Hash	102
Work With Hash Elements	104

7) USING SUBROUTINES

Using a Subroutine	106
Pass Arguments to a Subroutine	108
Set the Variable Scope	110

8) ACCEPTING INPUT AND GENERATING OUTPUT

Using the Print Function	112
Format Output With the Printf Function	114
Define a Format	116
Get Keyboard Input	118
Execute a System Command	120

9) USING REGULAR EXPRESSIONS

Create a Regular Expression	122
Match Characters	124
Using Character Classes	126
Using Quantifiers	128

Using the Matching Operator	130
Using the Substitution Operator	132
Using the Translation Operator	134
Using Backreferences	136

10) WORK WITH THE FILE SYSTEM

Create and Write to a File	138
Read a File	140
Read Characters from a File.....	142
Change Position in a File	144
Determine the Position in a File	146
Determine the Status of a File	148
Change the Default Filehandle.....	150
Rename or Delete a File	152
Test a File.....	154
Work With Directories.....	156
Access Environment Variables	158

11) DEMYSTIFYING REFERENCES

Create References	160
Dereference a Reference	162
Using Symbolic References	164
Using References With Arrays	166
Create an Array of Hashes.....	168

12) HARNESSING PACKAGES AND MODULES

Create a Package	170
Using a Package	172
Create a Module	174
Using a Module	176
Get an Existing Module	178
Install an Existing Module	180
Using an Installed Module.....	182

13) DEBUGGING CODE

Generate Warning Messages	184
Using Strict Error Checking	186
Using the Debugger	188
Set a Breakpoint in the Debugger	190
Enter Perl Statements in the Debugger	192

14) WORK WITH PERL AND THE WEB

Introduction to HTML	194
Web Page Basics	195
Create a Form	196
Add Elements to a Form	197
Form Elements.....	198
Using Perl to Generate a Web Page.....	200
Using a Query String.....	202
Create and Process a Form in One Script	204
Create a Cookie.....	206
Read a Cookie	208
Access CGI Environment Variables	210
Using Server-Side Includes	212
Send E-mail Using Sendmail	214

15) WORK WITH DATABASES

Introduction to Databases	216
Connect to a Database	218
Issue a Command to a Database	220
Retrieve Information from a Database	222
Add a Record to a Database	224
Delete a Record from a Database	226

16) USING THE CGI.PM MODULE

Install the CGI.pm Module	228
Load the CGI.pm Module	230
Using the CGI.pm Module to Generate a Web Page	232
Specify Arguments for CGI.pm Functions	234
Using Object-Oriented Syntax	236
Create a Form	238
Create a Table	240
Extract Values from a Query String	242
Extract Multiple Values from a Form	244
Create a Cookie	246
Read a Cookie	248
Redirect a Web Page	250
Determine Information About a Perl Script	252
Generate a Custom Tag	254
CGI.pm Module Functions - Quick Reference	256

APPENDIX	262
