

PROFESSIONAL WAP

With WML, WMLScript, ASP, JSP, XML, XSLT, WTA, Push and VoiceXML

Charles Arehart, Nirmal Chidambaram, Shashikiran Guruprasad, Alex Homer,
Ric Howell, Stephan Kasippillai, Rob Machin, Tom Myers, Alexander Nakhimovsky,
Luca Passani, Chris Pedley, Richard Taylor, Marco Toschi

Table of Contents

Introduction	1
Chapter 1: Overview of WAP	9
WAP and the Wireless World	9
WAP Application Architecture	16
WAP Client	18
WAP Proxy, WAP Gateway Or WAP Server?	19
WAP Application Server	23
WAP Internal Structure	24
Protocols	24
Layers	24
WAP Protocol Stack	24
Wireless Application Environment (WAE)	26
Wireless Session Layer – WSP	29
Wireless Transaction Layer – WTP	29
Wireless Transport Layer Security – WTLS	31
Wireless Datagram Protocol – WDP	32
Getting a WAP Site on the Air	32
How Do I Get Started?	35
WAP versus the Web	36
WAP 1.2 - WTA and Push Features	37
Summary	41
Chapter 2: Setting up WAP	43
Available Software Products	43
WAP Browsers	44
WAP Gateways	45
WAP Application Servers	46
WAP Resources	48
The Development Toolkits	49
Nokia	49
Phone.com	55
Ericsson	61
Motorola	67
Which One to Choose?	70

Table of Contents

Other Tools	71
Chapter 3: WAP Gateways	77
What is a WAP Gateway?	77
Functionality of a WAP gateway	80
Implementation of WAP Protocol Stack Layers	80
Access Control	80
Protocol conversion: WSP ⇌ HTTP	81
Domain Name Resolution	82
HTML to WML Conversion	82
Encoding of WML Content	82
WMLScript Compilation	82
Security	83
Provide Caching for Frequently Accessed Content	83
The Web Model Vs the WAP Model	83
Positioning of a WAP Gateway In the Network	87
A WAP Gateway Provided by the Network Operator	87
A WAP Gateway Provided by the Content Provider	89
A WAP Gateway Provided by the Internet Service Provider (ISP)	90
Striking a Balance	90
Application Hosting	90
Who needs their own gateway?	91
Selecting a WAP Gateway	91
What are your options?	91
Installing and Configuring WAP Gateways	92
Building, Installing and Configuring Kannel	93
Configuring Nokia 7110 to connect to Kannel	96
Installing and Configuring a Nokia WAP Server on the Windows platform	97
Chapter 4: Basic WML	109
eXtensible Markup Language	109
WML Structure	112
A Basic WML Card	112
Text Formatting	115
Paragraphs and the <p> Tag	115
Styles	118
Special Characters	119
Navigation	121
Anchor Links	121
Going Backwards	124
Advanced Display Features	129
Tables	129
Images	131

Chapter 5: Interacting with the User	135
Making a Selection	135
The Options Menu	136
Templates	137
The do Element	139
The select Element	140
Events	142
Overriding the Normal Navigation	143
Timers	146
Selections	148
Variables	150
Using Variables	151
Escaping	154
Variables in Select Lists	155
Input and Parameter Passing	157
Input	157
Posting Data	161
Grouping Data	162
Summary	163
Chapter 6: WMLScript	165
Why Do We Need WMLScript?	166
Lexical Structure	167
Case Sensitivity	168
Expressions	168
Whitespace	168
Comments	169
Variables & Literals	169
Variable Scope and Lifetime	170
Strings as Arrays	170
Operators	171
Assignment Operator	171
Arithmetic Operators	171
Logical Operators	173
String Concatenation	173
Comparison Operators	174
Comma Operator	175
typeof Operator	175
isvalid Operator	176
Conditional Operator	176
Operator precedence	176
Automatic data type conversion	177

Table of Contents

Control Constructs	178
if statement	178
while statement	178
for statement	179
Functions	180
Passing Parameters	180
Using the Standard Libraries	182
Date Validation Example	183
Dialogs Library	187
Handling Arrays with the String Library	189
Pragmas	191
External Files	192
Access Control	193
Meta Information	193
Dealing with Errors	194
Error checking	194
Error handling	195
Chapter 7: Usability	197
Why is Usability Necessary?	198
Limitations of Wireless Devices	198
WML Interoperability Issues	199
Typical Users	200
Where do we go from here?	201
General Guidelines	201
Application Goals	202
How To Achieve The Goals	203
Guidelines for Specific Browsers	211
Guidelines for Nokia 7110	211
Guidelines for UP.Browser	213
The Generic Approach	217
User Agent Recognition Techniques	218
Chapter 8: ASP and WAP	225
Active Server Pages	225
Installation	226
Creating Dynamic Pages with ASP	227
ASP Object Model	228
Cookies	231
A Simple Example	232
ADO (ActiveX Data Objects)	233
Database-centric Web Applications	233
ActiveX Data Objects (ADO) 2.5	235
The ADO 2.5 Object Model	236

An ASP application in practice	239
Chapter 9: Multiple Device Types using XML and XSLT	261
The Fundamental Design Issues	262
W3C Initiatives for Disparate Client Compatibility	264
Using XML to Define Data	265
What is XML?	265
XML Document Structure	266
Data Definitions for XML Documents	268
Processing XML Documents	271
Transforming XML into Other Formats	272
The XSL Transformation Language (XSLT)	272
What is XPath?	273
XSLT Processing	273
How Does XSLT Work?	273
So What's XHTML All About?	276
What is XHTML?	277
XHTML and WML?	278
Providing Client-Specific Content	279
Document and Device Profiles	279
A Multiple Client Compatibility Example	281
The Structure of the Site	281
The Overall Process	282
Our XML Content Document	283
The RDF Device Profile Documents	283
The XML Document Profile	284
Processing the Document Profile	288
The 'process.asp' Main Processing Script	297
Chapter 10: Java, XML and WAP	307
Introduction to Servlets	310
An Overview	310
A Simple Example	311
Servlet Initialization	313
The Service Stage	314
Introduction to JSP	318
What is a JSP?	318
JSP Applications and Beans	318
A simple JSP Example	319
Overview of JSP Element Syntax	321
How does JSP Work?	326
Design Considerations	328
Servlet for Entry, JSP for Output	328
Separate the Servlet from Output Given in JSP	329
Dialog with the Client	329

Table of Contents

The Ride Board Application	330
A Pause before Changing Direction	352
XSLT	353
An XSLT and WML Example	353
Running the Example with XSLServlet	360
XSLT with Database Queries	364
The Ride Board Application Revisited	364
 Chapter 11: ColdFusion and WAP	 379
ColdFusion – A Brief Introduction	380
WAP and ColdFusion	383
The Key to the Kingdom: CFCONTENT	383
A Basic ColdFusion WAP Example	384
Using Other Features of ColdFusion	385
ColdFusion Studio/HomeSite Editing Features for WAP Development	398
Techniques, Tricks and Traps in ColdFusion/WAP Development	403
Error Handling	403
ColdFusion / WML Environment Configuration	406
Browser Detection and Redirection	411
Form Processing	414
Miscellaneous Concerns	418
 Chapter 12: Converting Existing Web Sites to WAP	 425
Why convert an existing site?	426
How do converters work?	427
What makes suitable content for conversion?	428
Methods of Converting Existing Sites	430
Fully automated converters	430
Configurable converters	432
Conversion by Source Modification	434
Simple Conversion Tool	435
Future Trends	463
 Chapter 13: WAP and E-Mail	 467
Introduction to E-Mail	468
Key Elements of E-Mail	470
The Mail Process	471
The Protocols of Internet Mail	471
Mail format and transport protocols	471

Storage and Retrieval protocols	473
E-Mail's Relationship with LDAP	474
E-Mail's Relationship with ACAP	474
A Typical E-Mail System	475
Programming E-Mail	475
Introduction to the JavaMail API	477
Installation of tools	477
Java Activation Framework (JAF)	479
The most important JavaMail classes	479
Simplifying WML generation – A WML helper class	480
E-Mail and E-Commerce Sites	484
E-Mail for E-Commerce Order Confirmation	484
A Complete E-Mail Application	487
POP3 Programming Hints	488
A WAP-based E-mail Application	490
Enhancements to WAPMail	502
Sending and Receiving E-Mail using ASP	503
Sending an E-Mail	503
Reading E-mails	506
vCard and exchange of personal information	511
Chapter 14: WAP and LDAP/Directory Services	515
Introduction to Directory Services and LDAP	516
What is a Naming Service?	516
What is a Directory Service?	516
Directory Services: a Brief History	519
The Road to LDAP	520
LDAP and WAP	521
How LDAP Data is Structured	521
Miscellaneous LDAP Issues	524
The LDAP protocol	526
Other protocol services	526
Major vendors of LDAP servers	528
Programming LDAP: Using LDAP APIs and SDKs	529
JNDI and LDAP	530
Simplifying Access to Directory Services	531
The JNDI Packages	531
Installation of Tools	532
A Simple WML Login Screen	533
Searching with JNDI	537
A Phone Book Application	538
Further JNDI Programming Issues	543
Active Directory and ADSI	548
Inside ADSI	549
Listing Users in WinNT	552
Searching Active Directory	555

Table of Contents

The Application Configuration Access Protocol	557
Wireless Issues	557
Chapter 15: WAP Security	561
The Need for Security	562
Security in Context	562
Security Basics	563
Authentication	563
Confidentiality	564
Integrity	564
Authorization	564
Non-repudiation	565
Encryption Technologies	565
Basic Principles	565
Cryptography	566
Keys	566
Symmetric and Asymmetric Ciphers	567
Cipher Suites	568
Certificates	570
Comparing Security Models	571
Security on the Internet	572
Security in WAP	574
Wireless Security Issues	575
Device Versus User	576
The WAP Gateway	577
TLS and WTLS	580
Future of Wireless Security	582
WAP 1.2	582
WIM	583
Security products	583
Chapter 16: Push Technologies	591
Internet Push Model	592
Rationale of a WAP Push Model	592
The Push Framework	593
Client Addressing	594
The Push Proxy Gateway (PPG)	596
The Push Access Protocol (PAP)	597
Commonly used WAP Push Content Types	607
Push Over-the-Air (OTA) Protocol	609
Problems with Push Technologies	610
Using Phone.com Tools	611
An SMS Text Based Push Example	614

Chapter 17: WTA – Interacting with the Mobile Phone	625
What Is WTA?	626
Fundamentals of the WTA Architecture	627
WTA User Agent	628
WTA Server	629
WTA Security	629
Initiation of WTA Services	631
WTA Interfaces (WTAI)	631
Calling WTAI Functions	632
Public WTAI Functions	633
Network Common WTAI	635
Network Specific WTAI	641
WTA State Model	641
Call State Management	642
Repository	642
Event Handling	646
WTA Application Scenarios	647
"Automatic Retry" Application	648
Voicemail Application	649
Other Applications	652
Chapter 18: VoiceXML-Voice Markup language	655
How to get started	656
Introduction to VoiceXML	656
Elements of the VoiceXML Implementation	659
Overview of VoiceXML	661
Grammar	661
Structure of VoiceXML Applications	662
Different Types of Forms	663
A Form: Dialog	664
A Menu Dialog	668
Sub Dialogs within a Form	669
Transitions between Dialogs	670
Variables and Actions in VoiceXML Dialogs	672
Event Handling in VoiceXML	674
Other Elements of VoiceXML	676
A Sample VoiceXML Application	678
VoiceXML and WAP	680
Next Generation Interfaces and Multi Modal Technology	680
Chapter 19: What the Future Holds	687
High Bandwidth – Key Enabler or Disappointment?	688
Evidence for the Existence of a Wireless Market	690
The Future for Client Devices and Operating Systems	692

Table of Contents

Appendix A: WML Elements	699
Appendix B: WMLScript Reference	709
Appendix C: Standard WMLScript Library Functions	719
Appendix D: WTAI Libraries	735
Appendix E: The WBMP Image Format	749
Appendix F: Apache and Tomcat Installation	751
Appendix G: Glossary	757
Appendix H: Resources	767
Appendix I: Support, Errata and p2p.wrox.com	777
Index	785
