

The SuSE™ Linux® Server

Paul G. Sery

Author of the *Linux Network Toolkit*

Mohammed J. Kabir

Author of the *Apache Server Bible*

"SuSE Linux Server is the authoritative guide for IT professionals wanting to exploit the rock solid architecture and cost effectiveness of SuSE Linux."

— Dirk Hohndel, CTO SuSE Linux, Germany

SuSE Linux 7.0 evaluation version

Foreword	ix
Preface	xi
Acknowledgments	xv

Part I Installing and Getting Started with SuSE Linux

Chapter 1	Installation and Basic Configuration	3
	The Big Bang!	3
	Introducing SuSE Linux	5
	Checking Your Hardware Requirements	5
	Preparing to Install SuSE Linux	8
	Creating a boot disk under MS Windows 9x/2000	8
	Creating a boot disk under Linux	9
	Installation Overview	10
	Installing SuSE Linux	11
	Configuring SuSE Linux Networking	24
Chapter 2	The Boot and Shutdown Processes	31
	Starting the Linux Kernel	31
	Configuring init	33
	The /sbin/init.d directory	38
	The /etc/rc.d/rc script	38
	The /etc/rc.d/rc[0-6].d directories	42
	Booting Up Your System	43
	Shutting Down Your System	44
	Canceling a shutdown	44
	Rebooting your server	45
	Rebooting using Ctrl+Alt+Del	46
	Automatic shutdown on power failure	46
	Managing init Files	47
	Using YaST to manage run levels	47
	Removing a service	47
	Examining the network script	48
	The System Configuration Files	52
Chapter 3	Understanding Linux/UNIX Files and Devices	55
	Understanding File/Directory Permissions	55
	Changing ownership of files/directories using chown	57
	Changing the group of files/directories using chgrp	57
	Understanding access permissions using octal numbers	58

Understanding access permissions using access strings	61
Changing access privileges of files/directories using chmod	62
Special notes on directory permissions	62
Managing Links	63
Changing permissions or ownership of a hard link	63
Changing permissions or ownership of a soft link	64
Creating a Permission Policy for a Multiuser Server	65
Setting users' configuration file permissions	65
Setting default file permissions for users	65
Setting executable file permissions	67
Working with Files and Directories	67
Viewing files and directories	67
Navigating your way into directories	67
Determining file type	67
Viewing the access statistics of a file or directory	68
Copying files and directories	68
Moving files and directories	69
Deleting files and directories	69
Finding files	69
Overriding the default file permission mask	70
Using ext2 File System-Specific Permissions	71
Everyday Commands	73
Understanding the UNIX Command Line	73
Basics of metacharacters	74
Basics of regular expressions	75
How to Use Online man Pages	77
General File and Directory Commands	79
cat	79
chmod	80
chown	80
clear	81
cmp	81
cp	82
cut	83
diff	84
du	86
fgrep	86
file	87
find	87
grep	88
head	88
ln	89
locate	89
ls	89
mkdir	90
mv	90

Chapter 4

pwd	91
rm	91
sort	92
tail	93
touch	94
umask	94
uniq	94
vi	95
wc	97
whatis	97
whereis	97
which	98
File Compression and Archive-Specific Commands	98
compress	98
gunzip	99
gzip	99
rpm	99
tar	101
uncompress	102
File System-Specific Commands	102
dd	102
df	103
fdformat	104
mkfs	104
mkswap	104
mount	104
swapoff	105
swapon	105
umount	105
System Status-Specific Commands	106
dmesg	106
free	106
shutdown	107
uname	107
uptime	108
User Administration Commands	108
chfn	108
chsh	108
groupadd	108
groupmod	108
groups	108
last	109
passwd	109
su	109
useradd	110
userdel	110

usermod	110
who	110
whoami	110
User Commands for Accessing Network Services	111
finger	111
ftp	111
mail	112
rlogin	112
talk	113
Telnet	113
wall	113
Network Administrator's Commands	114
hostname	114
ifconfig	114
netstat	115
ping	115
route	117
traceroute	118
Process Management Commands	119
bg	119
fg	119
jobs	120
kill	120
killall	120
ps	120
top	120
crontab	120
Productivity Commands	121
bc	121
cal	121
mesg	122
write	122
Shell Commands	123
alias	123
history	123
set	124
source	124
unalias	125

Using YaST	129
Introducing YaST	129
What Does YaST Do?	130
Modifying your server's installation features	130
Choose or install SuSE software packages	135

Chapter 6

Updating the system	137
Administering your system	137
Miscellaneous features	140
User Administration	141
Becoming Superuser	141
Assigning Privileges to Ordinary Users	143
Managing Users with Command-Line Tools	147
Creating a new user account	148
Creating a new group	149
Modifying an existing user account	150
Modifying an existing group	152
Deleting or disabling a user account	153
Creating default user settings	153
Managing Users with YaST	156
Adding a new user account	156
Modifying an existing user account	158
Adding, modifying, and deleting groups	158

Chapter 7

Process Administration	161
Starting Processes	161
Controlling and Monitoring Processes	162
Using ps to get process status	163
Signaling a running process	166
Controlling process priority	172
Monitoring Processes and System Load	173
Using top	174
Using vmstat	175
Using uptime	176
Logging Processes	176
Configuring syslog	176
Monitoring logs using tail	178
Scheduling Processes	178
Using at	178
Using cron	180

Chapter 8

Network Administration	183
Basics of TCP/IP Networking	183
Introducing the TCP/IP protocol	183
Introducing TCP/IP networks	185
Dividing a Network into Subnetworks	193
Introducing IP Routing	197
Configuring a Network Interface	198
Manually configuring network interface cards	198
Modifying the network startup scripts	203
Configure a network interface card with YaST	207
Routing Between Two Subnets	209
Gateway computer configuration	211
Host computer configuration	212

Chapter 9

Configuring your Domain Name Service	217
Understanding DNS	217
Configuring a DNS Client	219
Configuring a DNS Server	222
Understanding the <code>/etc/named.conf</code> file	222
Configuring zone files	227
Master/primary DNS server	232
Slave/secondary DNS server	233
Reverse DNS server	233
Cache-only/slave DNS server	235
Controlling the DNS server	235
Testing Your DNS Server	236
Managing DNS for Virtual Domains	237
Balancing Load Using the DNS Server	246

Chapter 10

E-mail Service	249
Choosing sendmail	249
Using the default SuSE sendmail configuration	250
Configuring sendmail	254
Modifying the <code>/etc/sendmail.cf</code> and <code>/etc/mail/sendmail.cw</code> files	255
Configuring DNS to work with sendmail	256
Starting and stopping sendmail	257
Describing the <code>/etc/sendmail.cf</code> in detail	258
Configuring the <code>/etc/mail/*</code> files	266
Testing Your sendmail Configuration	274
Testing sendmail address rewrite rules	274
Testing <code>/etc/mail/*</code> database files	275
Using sendmail to see the SMTP transaction verbosely	276
Using the sendmail debug flag	277
Using a test configuration file	277
Securing sendmail	278
Securing your configuration files	278
Ensuring a stricter mode of operating and privacy	279
Antispam Measures	280
Dealing with third-party mail relay vulnerability	280
Sending spammers to the black hole	282
Setting Up POP and IMAP Servers	284
How does it work?	285
Configuring POP service	286
Using IMAP	287
Configuring SMTP/POP/IMAP Mail Clients	288
Commercial Alternatives to sendmail	291
Sendmail Pro	291
qmail	291

Chapter 11	Web Service	293
	System Requirements for Apache	294
	Sufficient disk space	294
	Sufficient RAM	294
	Other requirements	295
	Starting Apache	295
	Configuring Apache	298
	Configuring httpd.conf	299
	srm.conf and access.conf files	305
	Testing the Apache server	306
	Managing Your Apache Server	306
	Configuring Apache for CGI scripts	306
	Configuring Apache for server-side includes	311
	Hosting virtual Web sites	320
	Authenticating Web users	325
	Monitoring server status	333
	Logging hits and errors	334
	Enhancing Web server security	341
	Using SSL for secured transactions	347
Chapter 12	Configuring an FTP Server	351
	Using Washington State FTP	351
	Configuring FTP service	352
	Creating an anonymous FTP site	366
	Creating a guest FTP account	369
	Creating virtual FTP sites	369
	Using a Commercial FTP Server	371
	Using a Trivial File Transfer Protocol Server	372
Chapter 13	Other Popular Services	373
	Setting Up Internet Relay Chat Service	373
	Installing an IRC server	373
	Configuring an IRC server	374
	Running an IRC server	379
	Installing and using an IRC client	380
	Setting Up a Usenet News Service	384
	Configuring an INN server	384
	Accessing your INN server	386
Part IV	Setting Up File Sharing and Database Services	389
Chapter 14	Sharing Files and Printers with Samba	391
	Installing Samba	391
	Configuring Samba	392
	The [global] configuration	395
	The [homes] configuration	398
	The [printers] configuration	399

	Using GUI Configuration Tools	399
	Testing the /etc/smb.conf configuration	400
	Starting, stopping, and restarting the Samba service	400
	Practical Uses of Samba	401
	Using a Linux file server on Windows	401
	Using a Windows file server on your Linux system	402
	Sharing a Linux printer with Windows	404
	Using an interactive Samba client	405
	Securing Your Samba Server	407
	Using a Windows NT server as a password server	407
	Using encrypted passwords on your Samba server	408
Chapter 15	Using the Network File System	411
	Introducing the NFS Server	411
	Configuring an NFS Server	413
	Granting read-only access to the exported directory	414
	Granting read/write access to the exported directory	414
	Disabling access to a certain directory	414
	Mapping users between the NFS server and the clients	415
	Using NFS Utilities	417
	Securing Your NFS Server	418
	Distributing Files Using rdist	419
Chapter 16	Structured Query Language Database Services	425
	What Is SQL?	425
	Installing and Configuring a SQL Server: MySQL	427
	Starting the SQL Server	428
	Accessing the SQL Server	429
	Starting MySQL client for the first time	430
	Creating a database	430
	Interacting with the SQL Server Using Scripts	432
	SQL interactions from the UNIX command prompt	433
	Using a CGI script to access a SQL database via a Web browser	445

Part V Securing and Monitoring 453

Chapter 17	Security 101	455
	Securing User Access	455
	Restricting physical access	456
	Restricting normal user access	457
	Restricting superuser access	458
	Restricting all access in an emergency or attack	459
	Securing the User Authentication Process	460
	Using shadow passwords	461
	Understanding Pluggable Authentication Modules	462
	Securing Services	467
	Removing unnecessary services during OS installation	467
	Securing inetd-run services	469

Protecting Your Files and File Systems	477
Mounting file systems as read-only	478
Taking advantage of the EXT2 file system	478
Using Tripwire for ensuring file integrity	480
Back Up and Backtrack Everything	485
Get the Latest Security News	485
CERT	485
BUGTRAQ@NETSPACE.ORG	486
Chapter 18 Network Security	487
Understanding the Security Problem	487
Ethernet sniffing	488
IP spoofing	488
Designing a Secure Network	489
Using nonroutable IP addresses	489
Masquerading IP addresses	490
What Is a Firewall?	492
IP packet filters	493
Using a basic packet-filtering firewall: ipchains	494
An application-level firewall	497
Using the Squid Proxy Server	498
Getting and installing Squid	498
Using Squid for the first time	499
Modifying Squid to fit your needs	500
Probing Your Network with nmap	503
Port scan your Linux server	504
Port scan another Linux box	505
Port scan a Windows computer	505
Fingerprinting your network	506
Blocking scans with a firewall	506

Part VI Tuning for Performance 509

Chapter 19 Hacking the Kernel	511
Why Do You Need a Newer Kernel?	511
Customizing the Kernel	512
Verifying you have the necessary compilers	512
Installing the Linux kernel source	512
Configuring the kernel manually	513
Configuring the kernel using make menuconfig	530
Compiling, Installing, and Booting the New Kernel	531
Patching a Kernel	533
Creating the Initial ramdisk	533
Configuring LILO	534
Booting With the New Kernel	535

Building a Multiserver Web Network	537
Requirements for the Web Network	538
Designing the Web Network	538
Considering a round-robin DNS solution	539
Considering a hardware load-balancing solution	540
Choosing the correct load-balancing solution	541
Allocating IP Addresses	547
Configuring the Network	549
Setting up the network for a name server computer	549
Setting up the network interfaces for each Web server	551
Setting up network interfaces of the WSD Pro director	552
Testing the network configuration	555
Setting Up the DNS Server	556
Setting Up the NFS Server	559
Setting Up the Mail (SMTP/POP3/IMAP) Server	560
Setting Up the FTP Server	560
Setting Up rdist on the Name Server	560
Setting Up Each Web Server	563
Setting up the NFS client configuration	563
Setting up sendmail to relay to the smart host	563
Setting up rdist for file distribution from ns.aminews-lan.com ..	564
Setting Up the Web Director	565
Creating the Web services farm	565
Creating the related network services farm	568
Managing the Network	568
Taking a server out of service	569
Prioritizing server selection	569
Monitoring server load and statistics	569
Adding a new Web server in the Web server farm	570
Adding Client Web Sites	570
Appendix A: What's on the CD-ROM	573
Appendix B: Linux Resources	577
Appendix C: Linux Printing	583
Appendix D: The /etc/rc.config File	587
Index	597
End-User License Agreement	610
GNU General Public License	613
CD-ROM Installation Instructions	620
