

Design of Structural Timber

W. M. C. McKenzie

Contents

<i>Preface</i>	ix
<i>Acknowledgements</i>	x
1. Structural Timber	1
1.1 Introduction	1
1.2 Moisture Content	3
1.3 Defects in Timber	4
1.4 Classification of timber	6
1.4.1 Visual Strength Grading	7
1.4.2 Machine Strength Grading	7
1.5 Material Properties	8
1.6 Preservative Treatments	10
1.7 Design Philosophies	10
1.7.1 Permissible Stress Design	11
1.7.2 Load Factor Design	11
1.7.3 Limit State Design	11
1.8 Structural Loading	12
1.8.1 Dead Loads	12
1.8.2 Imposed Loads	13
1.8.3 Imposed Roof Loads	13
1.8.4 Wind Loads	13
1.9 Review Problems	14
2. Elastic Analysis Techniques	15
2.1 Introduction	15
2.2 Modification Factors	17
2.3 Shear Force and Bending Moment	20
2.3.1 Example 2.1 Beam with Point Loads	20
2.4 Shear Force Diagram	23
2.5 Bending Moment Diagram	26
2.5.1 Example 2.2 Beam with Uniformly Distributed Load	30
2.5.2 Example 2.3 Beam with Combined Point Loads and UDL's	33
2.6 Elastic Shear Stress Distribution	35
2.6.1 Example 2.4 Shear Stress Distribution in a Rectangular Beam	36

2.7	Elastic Bending Stress Distribution	39
2.7.1	Example 2.5 Bending Stress Distribution in a Rectangular Beam	40
2.8	Transformed Sections	41
2.8.1	Example 2.6 Composite Timber/Steel Section	43
2.9	Deflection of Beams	45
2.9.1	Equivalent UDL Technique	46
2.10	Résumé of Analysis Techniques	47
2.10.1	Method of Sections	47
2.10.2	Joint Resolution	48
2.11	Example 2.7 Pin-Jointed Truss	48
2.11.1	Joint Resolution	51
2.11.2	Secondary Bending	52
2.12	Frames with Sway	54
2.13	Review Problems	57
3.	Flexural Members	59
3.1	Introduction	59
3.2	Effective Span	60
3.3	Solid Rectangular Beams	61
3.3.1	Shear	61
3.3.2	Bending	62
3.3.3	Deflection	62
3.3.4	Bearing	62
3.3.5	Lateral Stability	64
3.3.6	Notched Beams	66
	3.3.6.1 <i>Effect on shear strength</i>	66
	3.3.6.2 <i>Effect on bending strength</i>	67
3.3.7	Example 3.1 Suspended Timber Floor System	68
	3.3.7.1 <i>Solution to Example 3.1</i>	69
3.3.8	Example 3.2 Trimmer Beam	74
	3.3.8.1 <i>Solution to Example 3.2</i>	75
3.4	Ply-web Beams	77
3.4.1	Web	78
	3.4.1.1 <i>Panel shear</i>	79
	3.4.1.2 <i>Rolling shear</i>	80
	3.4.1.3 <i>Web stiffeners</i>	81
3.4.2	Flanges	81
	3.4.2.1 <i>Bending</i>	81
	3.4.2.2 <i>Deflection</i>	83

3.4.2.2.1.	<i>Bending deflection</i>	83
3.4.2.2.2.	<i>Shear deflection</i>	83
3.4.3	Lateral stability	84
3.4.4	Example 3.3 Ply-web Roof Beam Design	84
3.4.4.1	<i>Solution to Example 3.3</i>	85
3.4.5	Example 3.4 Access Bridge in Exhibition Centre	90
3.4.5.1	<i>Solution to Example 3.4</i>	92
3.5	Stressed-Skin Panels	103
3.5.1	Example 3.5 Stressed-Skin Floor Panel	104
3.5.1.1	<i>Solution to Example 3.5</i>	104
3.6	Glued Laminated Beams	111
3.6.1	Manufacture of Glulam	113
3.6.1.1	<i>Sequence of production operations</i>	113
3.6.1.2	<i>Finger-Joints</i>	114
3.6.1.3	<i>Adhesives</i>	115
3.6.1.4	<i>Surface finishes</i>	115
3.6.1.5	<i>Preservation treatments</i>	115
3.6.1.6	<i>Modification factors</i>	115
3.6.2	Vertically Laminated Beams	116
3.6.3	Horizontally Laminated Beams	117
3.6.4	Example 3.6 Glulam Roof Beam Design	118
3.6.4.1	<i>Solution to Example 3.6</i>	119
3.7	Review Problems	122
4.	Axially Loaded Members	123
4.1	Introduction	123
4.2	Design of Tension Members	124
4.2.1	Example 4.1 Collar Tie Member	124
4.2.1.1	<i>Solution to Example 4.1</i>	125
4.3	Design of Compression Members	126
4.3.1	Slenderness	127
4.3.1.1	<i>Effective Length</i>	128
4.3.2	Example 4.2 Concentrically Loaded Column	130
4.3.2.1	<i>Solution to Example 4.2</i>	130
4.3.3	Example 4.3 Covered Walkway	132
4.3.3.1	<i>Solution to Example 4.3</i>	133
4.3.4	Spaced Columns	137
4.3.4.1	<i>End packs</i>	137
4.3.4.2	<i>Intermediate packs</i>	138
4.3.5	Example 4.4 Spaced Glulam Column	139
4.3.5.1	<i>Solution to Example 4.4</i>	140

4.4	Parallel-chord Lattice Beams	144
4.4.1	Example 4.5 Lattice Girder	145
	4.4.1.1 Solution to Example 4.5	146
4.5	Review Problems	150
5.	Members Subject to Combined Axial and Flexural Loads	151
5.1	Introduction	151
5.2	Combined Bending and Axial Tension	152
5.2.1	Example 5.1 Pitched Roof Truss – Ceiling Tie	153
	5.2.1.1 Solution to Example 5.1	153
5.3	Combined Bending and Axial Compression	156
5.3.1	Example 5.2 Lattice Girder – Top Chord	159
	5.3.1.1 Solution to Example 5.2	160
5.3.2	Example 5.3 Laminated Portal Frame	169
	5.3.2.1 Solution to Example 5.3	170
5.4	Review Problems	175
6.	Mechanical Fasteners	176
6.1	Introduction	176
6.2	Nails	179
6.2.1	Example 6.1 Nailed Tension Splice	181
6.3	Screws	185
6.3.1	Example 6.2 Screwed Tension Splice	186
6.3.2	Example 6.3 Wall Cladding Subject to Wind Suction	187
6.4	Bolts and Dowels	188
6.4.1	Example 6.4 Bolted Joints with Load Parallel to the Grain Direction	191
6.4.2	Example 6.5 Bolted Joints with Load Perpendicular to the Grain Direction	194
6.4.3	Example 6.6 Bolted Joints with Load Inclined to the Grain Direction	196
6.4.4	Example 6.7 Bolted Knee-Brace	200
6.5	Connected Joints	203
6.5.1	Toothed-plate Connectors	203
6.5.2	Split-ring Connectors	204
6.5.3	Shear-plate Connectors	205
6.6	Example 6.8 Connected Joints	205
6.6.1	Toothed-plate Connectors	210
6.6.2	Split-ring and Shear-plate Connectors	216

6.7	Glued Joints	221
6.7.1	Example 6.9 Glued Lap Joint	223
6.8	Review Problems	224
7.	Roof Trusses	225
7.1	Introduction	225
7.2	Monopitch Roof	227
7.3	Coupled Roof	227
7.4	Close Coupled Roof	228
7.5	Collar Roof	229
7.6	Purlin Roof	229
7.7	Trussed Rafters	230
8.	Eurocode 5	233
8.1	Introduction	233
8.1.1	National Application Document	233
8.2	Terminology, Symbols and Conventions	233
8.2.1	Decimal Point	234
8.2.2	Symbols and Subscripts	234
8.3	Limit State Design	236
8.3.1	Design Values	236
8.3.2	Partial Safety Factors	238
8.4	Materials	239
8.5	Conventions	241
8.6	Use of EC5	241
8.7	Example 8.1 Solid Timber Flexural Member	241
8.8	Example 8.2 Solid Timber Tension Member	255
8.9	Example 8.3 Member Subject to Combined Tension and Bending	257
8.10	Compression Members	258
8.11	Example 8.4 Solid Timber Compression Member	260
8.12	Example 8.5 Member Subject to Combined Compression and Bending	261

9. Overall Structural Stability	265
9.1 Introduction	265
9.2 Structural Form	267
9.3 Braced Frames	268
9.4 Unbraced Frames	269
9.5 Shear Cores/Walls	269
9.6 Cellular Construction	271
9.7 Diaphragm Action	272
9.8 Accidental Damage and Robustness	273
9.9 Review Problems	274
 Appendix A Continuous Beam Coefficients	 275
 Bibliography	 283
 Index	 285
