

DIGITAL SIGNAL PROCESSING

An Overview of Basic Principles

Jack Carlinhour

CONTENTS

INTRODUCTION	1
1 LINEAR, SHIFT-INVARIANT CONTINUOUS TIME SYSTEMS	5
1-1 Time Domain Description	5
1-2 The Laplace Transform and System Transfer Functions	7
1-3 Impulse Response	13
1-4 Convolution	15
1-5 BIBO Stability of LSI Systems	16
Problems	17
2 FREQUENCY DOMAIN ANALYSIS FOR LSI CONTINUOUS TIME SYSTEMS	23
2-1 Complex Numbers and Complex Functions of a Real Variable	23
2-2 Introduction to the Frequency Response Function	26
2-3 Complex Exponential Signals and Negative Frequency	30
2-4 Frequency Response Function: Relationship to System Impulse Response	32
2-5 Steady-State Response to Periodic Signals	33
Problems	35
3 FOURIER TRANSFORM ANALYSIS OF CONTINUOUS TIME LSI SYSTEMS	39
3-1 The Fourier Transform, Signal Spectrum, and Frequency Response	39
3-2 Relationship of Fourier and Laplace Transforms	40
3-3 Relationship Between Frequency Response Function and System Poles and Zeros	41

3-4	Fourier Transform Convolution Theorems	45	
3-5	Fourier Transform Time and Frequency Shifting Theorems	46	
3-6	Fourier Transform Symmetry Properties	48	
3-7	Fourier Transform Examples	50	
	Problems	65	
4	BUTTERWORTH AND CHEBYSHEV LOWPASS AND HIGHPASS FILTERS		71
4-1	Frequency Response Function: Butterworth Lowpass Filter	71	
4-2	Frequency Response Function: Chebyshev Lowpass Filter	73	
4-3	Transfer Functions for Normalized Lowpass Filters	80	
4-4	Lowpass-to-Lowpass Transformation	89	
4-5	Active Lowpass Filter Circuits	93	
4-6	Highpass Filters	96	
4-7	Required Filter Order	102	
	Problems	107	
5	LINEAR, SHIFT-INVARIANT DISCRETE TIME SYSTEMS		109
5-1	Time Domain Description	109	
5-2	Impulse Response and Convolution	116	
5-3	The Z Transform	122	
5-4	Transfer Function of a Discrete Time System	131	
5-5	BIBO Stability of LSI Discrete Time Systems	137	
5-6	The Z Transform and System Analysis	140	
	Problems	153	
6	FREQUENCY DOMAIN ANALYSIS OF DISCRETE TIME SYSTEMS		161
6-1	Frequency Response Function	161	
6-2	Steady-State Response to Periodic Signals	165	
6-3	The Discrete Time Fourier Transform	166	
6-4	DTFT Symmetry and Periodicity	168	
6-5	DTFT of a Sinusoidal Sequence	174	

6-6	Relationship Between the Fourier Transform and the DTFT	175
6-7	Discrete Time Processing of Continuous Time Signals	182
6-8	Relationship Between Frequency Response Function and System Poles and Zeros	185
6-9	DTFT Shifting and Modulation Theorems	192
6-10	DTFT Convolution Theorems	194
6-11	The Rectangular Window and Its Spectrum	196
6-12	DTFT of a Truncated Sinusoid	200
6-13	Ideal Lowpass Filter	205
6-14	A Simple FIR Lowpass Filter	207
6-15	Systems Having Generalized Linear Phase	213
6-16	Phase Functions: Principal Value Versus Unwrapped Phase	216
	Problems	218
7	SAMPLING THEOREM AND REAL-WORLD D/A CONVERSION	227
7-1	Relationship Between the Fourier Transform and the DTFT	227
7-2	The Sampling Theorem and Ideal D/A Conversion	231
7-3	Real-World D/A Conversion	233
	Problems	237
8	DISCRETE FOURIER TRANSFORM (DFT) AND FAST FOURIER TRANSFORM (FFT)	239
8-1	The DFT and Its Relationship to the DTFT	239
8-2	The Fast Fourier Transform (FFT)	242
8-3	Zero Padding	242
8-4	The DFT and Convolution	249
	Problems	250
9	DESIGN OF FIR FILTERS	253
9-1	Introduction	253
9-2	FIR Filter Design Using the Window Method	254
9-3	The Kaiser Window	260
9-4	Empirical Formulas for FIR Lowpass Filter Design Using the Kaiser Window Method	266

9-5	FIR Bandpass, Highpass, and Bandstop Filters Designed Using the Kaiser Window Method	268
9-6	Design of FIR Filters Using the Parks-McClellan Algorithm	277
9-7	Effects of Coefficient Quantization in FIR Filters	293
9-8	Scaling to Prevent Overflow	295
	Problems	298

10 DESIGN OF IIR FILTERS USING THE BILINEAR TRANSFORMATION

301

10-1	Introduction	301
10-2	The Bilinear Transformation	302
10-3	The Design Problem	306
10-4	Examples	307
10-5	Required Filter Order	317
10-6	Alternate Second-Order Structures	321
	Problems	325

11 ADAPTIVE FIR FILTERS USING THE LMS ALGORITHM

327

11-1	General Problem	327
11-2	LMS Algorithm Derivation	329
11-3	An Application: Suppression of Narrowband Interference	331
	Problems	340

12 RANDOM SIGNALS AND POWER SPECTRA, A/D CONVERSION NOISE, AND OVERSAMPLING

341

12-1	Introduction	341
12-2	Discrete Time Random Signals	342
12-3	Random Signals and LSI Systems	347
12-4	Zero Mean White Noise Random Signal	350
12-5	A/D Conversion, Quantization Noise, and Oversampling	352
12-6	Decimation and Interpolation	359
	Problems	370

APPENDICES

A	Convolution	373
B	Programming FIR Filter Algorithms in Higher-Level Languages	381
C	Derivation of Equation (10-8)	385
D	Parseval's Theorem	387
