MICHAEL A. BROOK

# CONTENTS

<b>Foreword</b>	<b>xxi</b>
<b>Preface</b>	<b>xxiii</b>

<b>PART I: FUNDAMENTALS OF SILICON REACTIVITY: REACTIVE INTERMEDIATES AND REACTION MECHANISMS</b>	<b>1</b>
---	----------

<b>1. Organosilanes: Where to Find Them, What to Call Them, How to Detect Them</b>	<b>3</b>
1.1. Introduction	3
1.2. References	5
1.2.1. General References	5
1.2.2. Organometallic and Inorganic Chemistry	5
1.2.3. Analytical Chemistry	6
1.2.4. Organic Chemistry	6
1.2.5. Silicone and Polymer Chemistry	7
1.2.6. Industrial Applications of Organosilanes and Silicones	8
1.2.7. Silica Chemistry and Silane Coupling Agents	8
1.2.8. Surface Chemistry of Silicon	8
1.2.9. Recent Conference Proceedings and Special Symposia	8
1.2.10. Free References	9
1.3. Nomenclature	9
1.3.1. Silanes	9
1.3.2. Silazanes	10
1.3.3. Siloxanes	10
1.3.4. Cyclic Compounds	10

1.3.5.	Substituted Silanes	10
1.3.6.	Organic <i>versus</i> Organosilicon Nomenclature	12
1.3.7.	Silicones: General Electric Siloxane Notation	12
1.4.	NMR Characterization of Silicon-Containing Species	13
1.4.1.	$^{29}\text{Si}$ NMR Solution Spectra	14
1.4.2.	$^{29}\text{Si}$ NMR Solid-State Spectra: Magic-Angle Spinning	16
1.4.3.	Coupling Constants	19
1.4.4.	$^{29}\text{Si}$ NMR Chemical Shift Ranges for Various Organosilanes	19
1.4.5.	$^{29}\text{Si}$ NMR Chemical Shift Ranges for Organosilicon Polymers	23
1.5.	References	23
<b>2.</b>	<b>Atomic and Molecular Properties of Silicon</b>	<b>27</b>
2.1.	Atomic Properties	27
2.1.1.	General	27
2.1.2.	Electronegativity	27
2.1.3.	Covalent Bond Strengths	29
2.2.	Orbital Interactions of Silicon: Atomic Orbitals	29
2.3.	Molecular Properties of Silicon	31
2.3.1.	Backbonding between Silicon and Heteroatoms: <i>d</i> Orbitals <i>versus</i> $\sigma^*$ Orbitals	31
2.3.2.	Bonding between Silicon and Heteroatoms: Ionic Factors	35
2.4.	References	36
<b>3.</b>	<b>Silicon-Based Reactive Intermediates</b>	<b>39</b>
3.1.	Silylenes ( $\text{R}_2\text{Si}:$ )	40
3.1.1.	Preparation of Silylenes	41
3.1.1.1.	Stable Silylenes	44
3.1.2.	Reactions of Silylenes	45
3.1.2.1.	Insertion Reactions	45
3.1.2.2.	$\pi$ -Bond Addition Reactions	47
3.2.	Silylium Ions ( $\text{R}_3\text{Si}^+$ )	48
3.3.	Silyl Radicals ( $\text{R}_3\text{Si}^\cdot$ )	52
3.3.1.	Generation of Silyl Radicals	52
3.3.2.	Radical Reactions: Addition to $\pi$ Systems	54

3.4.	Silyl Anions ( $R_3Si^-$ )	55
3.4.1.	Preparation by Metal-Halogen Exchange and Other Metalations	56
3.4.2.	Reactions of Silyl Anions	59
3.5.	$\pi$ Bonds to Silicon	61
3.5.1.	Disilenes ( $R_2Si = SiR'_2$ )	62
3.5.1.1.	Generation of Disilenes	62
3.5.1.2.	Stable Disilenes	63
3.5.1.3.	Reactions of Disilenes	64
3.5.2.	Silenes ( $R_2Si = CR'_2$ )	65
3.5.2.1.	Preparation of Silenes	66
3.5.2.2.	Silaaromatic Compounds	70
3.5.2.3.	Silene Reactions	70
3.5.3.	Silanones ( $R_2Si = O$ )	73
3.5.3.1.	Theoretical Results	73
3.5.3.2.	Generation (?) of Silanones	74
3.5.3.3.	Reactions of Silanones	78
3.5.4.	$\pi$ Bonds between Silicon and Other Elements	78
3.6.	References	79
<b>4.</b>	<b>Extracoordination at Silicon</b>	<b>97</b>
4.1.	Extracoordination: Silicon as a Lewis Acid	97
4.2.	More Complex Pentacoordinate Compounds	99
4.3.	Reactivity of Extracoordinate Species: Electronic Distribution	101
4.4.	Reactions of Pentacoordinate Systems	103
4.4.1.	Extracoordinate Hydrosilanes: Reduction	103
4.4.2.	Extracoordinate Allylsilanes: Allylation	104
4.5.	Hexacoordinate Compounds	106
4.6.	Higher Extra Coordinate Species	110
4.7.	References	111
<b>5.</b>	<b>Reaction Mechanisms for Nucleophilic Substitution at Silicon</b>	<b>115</b>
5.1.	Reaction Mechanisms in Carbon Chemistry	115
5.2.	The Study of Stereochemistry, Mechanism, and Silicon: Enantiopure Silanes	116
5.2.1.	Inversion: The $S_N2$ Reaction	117

5.2.2.	Retention: The $S_{Ni}$ Mechanism	119
5.3.	The Role of Extracoordinate Silicon in Nucleophilic Substitution	121
5.4.	Silicon as an Inorganic Element (Rather Than as a Carbon Analogue): Understanding the Stereochemical Outcome	122
5.4.1.	Pseudorotation	122
5.4.2.	Factors Affecting the Stereochemistry of Substitution	125
5.4.3.	Why Not the $S_{Ni}$ Mechanism?	131
5.4.4.	Retention <i>versus</i> Inversion	133
5.5.	The Mechanism of Substitution in the Presence of Silaphilic Catalysts	133
5.5.1.	Fluoride-Catalyzed Substitutions	135
5.5.1.1.	Oxidation of Silicon-Carbon Bonds	136
5.6.	References	137

## **PART II: THE FORMATION AND CLEAVAGE OF NON-CARBON BONDS TO SILICON: APPLICATIONS IN ORGANIC AND POLYMER CHEMISTRY** **143**

<b>6.</b>	<b>Silicon and Transition Metal Chemistry</b>	<b>145</b>
6.1.	Metal Complexes without Si-Metal Bonds	145
6.1.1.	Arysilanes as Ligands	145
6.1.2.	Cyclopentadienylsilanes as Organometallic Ligands	146
6.1.2.1.	Preparation of Cp-Silanes and Metallocenes	146
6.1.2.2.	Metallocenes as Catalysts for Olefin Polymerization and Other Reactions	147
6.1.2.3.	Metallocenes for Ring-Opening Polymerization	147
6.1.3.	Silylalkynes as Ligands	148
6.2.	$\eta^1$ -Si-Metal Complexes	150
6.3.	Some Reactions of $\eta^1$ -Si-Metal Complexes	153
6.3.1.	Attack at Silicon by Nucleophiles	153

6.3.2.	Attack at Silicon by Electrophiles	153
6.3.3.	Insertion Reactions: Loss of Silicon with Si-C Formation	153
6.4.	Transition Metal Complexes of Stable Silyl Species	155
6.4.1.	$\eta^2$ Coordination of Si-H Bonds	155
6.5.	Stabilization of Silicon-Based Reactive Intermediates	156
6.5.1.	Silylenes Stabilized by Transition Metals	156
6.5.2.	Disilenes Stabilized by Transition Metals	159
6.5.3.	Silenes Stabilized by Transition Metals	160
6.5.3.1.	An Unusual Silene: An Aromatic, Cyclopentadiene Ring Containing Silicon	162
6.6.	References	163
<b>7.</b>	<b>Hydrosilanes as Reducing Agents</b>	<b>171</b>
7.1.	Si-H Bond Strengths	171
7.2.	Reduction of Organic Functional Groups	172
7.2.1.	Reduction of Alkyl Halides	172
7.2.2.	Reduction of Other Functional Groups	173
7.2.3.	Other Hydropolysilanes	175
7.3.	Reduction of Carbocations	175
7.4.	Formation of SiO Bonds Using Hydrosilanes	175
7.4.1.	Hydrolysis and Alcoholysis	176
7.4.2.	Reduction of Carbonyl Groups	177
7.4.3.	Other Reductions	182
7.4.4.	Oxidation/Halogenation	185
7.5.	References	185
<b>8.</b>	<b>Replacing H with Si: Silicon-Based Reagents</b>	<b>189</b>
8.1.	Trimethylsilyl-Based Reagents	190
8.1.1.	Chlorotrimethylsilane ( $\text{Me}_3\text{SiCl}$ , TMSCl) and Other Chlorotrialkylsilanes	190
8.1.2.	Bromo- and Iodotrimethylsilane ( $\text{Me}_3\text{SiBr}$ , TMSBr, and $\text{Me}_3\text{SiI}$ , TMSI)	190
8.1.2.1.	Ester, Ether and Cleavage	190
8.1.2.2.	Carbonyl Addition Processes	191
8.1.2.3.	Halosilane-Accelerated Carbon-Carbon Bond Forming Reactions	191

8.1.3.	Silazanes	192
8.1.3.1.	Trimethylsilylimidazole	194
8.1.3.2.	Azidotrimethylsilane ( $\text{Me}_3\text{SiN}_3$ , TMSN <sub>3</sub> )	195
8.1.4.	Cyanotrimethylsilane	196
8.1.5.	Trimethylsilyl Triflate ( $\text{Me}_3\text{SiOSO}_2\text{CF}_3$ , TMSOTf)	197
8.1.6.	Other Trimethylsilyl-Based Reagents	198
8.2.	Silyl Protecting Groups	198
8.2.1.	The Relative Size of Silyl Groups	199
8.2.2.	Protecting Alcohols: Silyl Ethers (Alkoxysilanes)	201
8.2.3.	Amine Protection: Silazanes	203
8.2.4.	Protection of Carbon-Based Functional Groups	204
8.2.5.	Using Organosilanes for the Improved Introduction or Cleavage of Protecting Groups	205
8.2.6.	Protection of Main Group Element and Transition Metal $\eta^1\text{-C}$ Complexes	205
8.2.7.	Silyl Group Deprotection	206
8.2.7.1.	From Heteroatoms	206
8.2.7.2.	Cleavage from Carbon	208
8.3.	Silicon-Tethered Reactions: A Temporary Connection	209
8.3.1.	The Diels-Alder Reaction	209
8.3.2.	Radical Cyclization	210
8.3.2.1.	Trapping Carbon Radicals with Si-H Group	210
8.3.2.2.	Cyclization of Silicon-Stabilized Carbon Radicals	210
8.3.2.3.	Synthetic Exploitation of Radical Cyclization: $\alpha$ -Silyl Radicals	211
8.3.2.4.	Synthetic Exploitation of Radical Cyclization: $\beta$ -Silyl Radicals	212
8.3.2.5.	6-exo <i>versus</i> 7-endo Cyclization	213
8.3.2.6.	Cyclization of Silyl Radicals	213
8.3.3.	Photocyclization	214
8.4.	Silicon-Protected Nucleophiles I: Silyl Nitronates	215
8.5.	Silicon-Protected Nucleophiles II: Silyl Enol Ethers (Alkenoxysilanes, Enolsilanes)	215

8.5.1.	Preparation	217
8.5.2.	Reactions of Silyl Enol Ethers	218
8.5.2.1.	Oxidation	219
8.5.2.2.	Protons as Electrophiles	220
8.5.2.3.	Reaction with Other Non-Carbon Electrophiles	221
8.5.2.4.	Reactions with Carbon Electrophiles	222
8.5.2.5.	Cycloaddition-Reactions of Silyl Enol Ethers	235
8.5.2.6.	Analogues of Silyl Enol Ethers: $\alpha$ -Silyl Esters	237
8.5.2.7.	Homologues of Silyl Enol Ethers: Siloxycyclopropanes	238
8.6.	References	239
<b>9.</b>	<b>Silicones</b>	<b>256</b>
9.1.	Uses of Silicones	257
9.1.1.	Thermal Stability	257
9.1.2.	Electrical Resistance	257
9.1.3.	Hydrophobicity: Surface Activity	257
9.2.	General Routes to Silicone Cyclics and Oligomers	258
9.2.1.	Hydrolysis: Excess Water	258
9.2.2.	Minimal Water, Basic Hydrolysis, or Hydrolysis of Alkoxysilanes	259
9.3.	Preparing/Modifying High-Molecular-Weight Silicones	261
9.3.1.	Equilibration: Thermodynamic Control	261
9.3.1.1.	Ring-Chain Equilibria	261
9.3.1.2.	Linear Chain Equilibria	263
9.3.1.3.	Catalysts	264
9.3.1.4.	Functionalized Silicones	266
9.3.2.	Kinetic Control	268
9.3.2.1.	Anionic Ring-Opening Polymerization	268
9.3.2.2.	Cationic Ring-Opening Polymerization	272
9.3.3.	Functional Silicone Side-Chains	274
9.3.3.1.	Liquid Crystalline Silicones	277
9.3.4.	Dendrimer Synthesis	278

9.4.	Crosslinking of Silicones	282
9.4.1.	$R_3SiH + HOSiR'_3$ Crosslinking	282
9.4.2.	Room-Temperature Vulcanization (RTV)	283
9.4.2.1.	Acidic and Basic Catalysis / Bifunctional Catalysis	284
9.4.2.2.	Titanate and Tin Catalysts	285
9.4.3.	Peroxide Cure (HTV)	287
9.4.4.	Radiation and UV-Induced Crosslinking	290
9.4.5.	Hydrosilylation Cure (Addition Cure)	291
9.4.6.	Crosslinking via Organic Side Chains	291
9.5.	Silicone-Organic Copolymers	292
9.5.1.	Linear Block Copolymers	292
9.5.2.	Graft and Crosslinked Silicone-Organic Block Copolymers	293
9.6.	Degradative Reactions of Silicones	294
9.6.1.	Hydrolytic Bond Cleavage	295
9.6.2.	Thermal Bond Exchange	295
9.6.3.	Oxidative Degradation	297
9.6.4.	Photodecomposition of PDMS	297
9.7.	References	298
<b>10.</b>	<b>Siloxanes Based on T and Q Units</b>	<b>309</b>
10.1.	Silica (Q Units)	309
10.2.	Crystalline and Amorphous Silica	309
10.2.1.	Commercial Processes: Fumed and Precipitated Amorphous Silica	311
10.2.2.	Sol-Gel Processes	312
10.2.2.1.	Controlling Silica Morphology	312
10.2.2.2.	Colloidal Silica Dispersions	317
10.2.3.	Silica Copolymers	318

11.8.	References	367

### **PART III: THE FORMATION AND CLEAVAGE OF SILICON-CARBON BONDS: APPLICATIONS IN ORGANIC SYNTHESIS 379**

12.	<i>Formation of Si-C Bonds: The Synthesis of Functional Organosilanes</i>	<b>381</b>
12.1.	The Direct Process	382
12.1.1.	The Direct Process I: Functional Hydrosilanes	382
12.1.2.	The Direct Process II: Alkylsilanes	382
12.2.	Grignard-Type Reactions	385

12.2.1.	Magnesium (Grignard) and Lithium Reagents	385
12.2.2.	Effect of Leaving Group	386
12.2.3.	Multiple Alkylation	386
12.3.	Other Ways of Generating Carbanions	388
12.3.1.	Wurtz-Fittig Coupling: Metal Halogen Exchange	388
12.3.1.1.	Reductive Coupling of Alkenes and Alkynes	389
12.3.1.2.	Reductive Disilylation of Dienes and Aromatic Compounds: Allylsilanes	390
12.3.2.	Reduction	392
12.3.3.	The Modified Shapiro Reaction: Ketones $\rightarrow$ Vinylsilanes	392
12.3.4.	Alkyl Metal Addition to Alkynes: Vinylsilanes	393
12.3.4.1.	Electrochemical Reduction	393
12.4.	Silyl Anions	394
12.5.	Acylsilanes	395
12.6.	Transition Metal-Catalyzed Reactions	397
12.6.1.	Metathesis with Disilanes and Hydrosilanes	397
12.6.2.	Bissilylation and Silylstannation of $\pi$ Systems: Alkyl-, Alkenylsilanes, and Silyl Enol Ethers	397
12.7.	Addition of Cyanotrimethylsilane to Alkynes	400
12.8.	Hydrosilylation	401
12.8.1.	Radical Processes	401
12.8.2.	Transition Metal-Catalyzed Hydrosilylation	403
12.8.2.1.	Platinum Catalysts	404
12.8.2.2.	The Relative Reactivity of $\pi$ Bonds	407
12.8.2.3.	Relative Reactivity of Hydrosilanes	409
12.8.2.4.	The Reaction Mechanism	409
12.8.2.5.	Further Mechanistic Suggestions	412
12.8.2.6.	Other Transition Metal Catalysts	413
12.8.2.7.	Stereochemical Control in Hydrosilylation	416
12.8.3.	Hydrosilylation of Dienes: Allylsilanes	417
12.8.4.	$\alpha$ , $\beta$ -Unsaturated Carbonyl Compounds: Silyl Enol Ethers	420
12.8.5.	Silylcarbonylation	421

12.9.	Formation of Si-C bonds - Some Unusual Approaches	422
12.9.1.	Insertion of Carbenes into Hydrosilane Bonds	422
12.10.	Functional Organosilanes Prepared from Organosilanes	422
12.10.1.	Redistribution: Exchange of Ligands between Organosilanes	422
12.10.1.1.	Comparison with Other Elements	423
12.10.1.2.	Nonlabile Ligands	423
12.10.1.3.	Semilabile Ligands	425
12.10.1.4.	Labile Ligands	427
12.10.1.5.	Metathesis between Organosilanes and Organic Compounds	428
12.10.2.	Carbanions Bearing Silyl Groups	429
12.10.2.1.	Readily Available Silyl-Containing Grignard Reagents: Alkylsilanes	429
12.10.2.2.	Metalation of Alkynylsilanes: Vinylsilanes	431
12.10.2.3.	Hydroboration of Alkynylsilanes and Allylsilanes	431
12.10.2.4.	Allylsilanes by the Metalation of Allylsilanes	432
12.10.2.5.	Vinylsilanes via Wittig Reactions	433
12.10.3.	Transition Metal-Catalyzed Reactions	435
