

Aging Power Delivery Infrastructures

H. Lee Willis
Gregory V. Welch
Randall R. Schrieber

Contents

<i>Series Introduction</i>	<i>iii</i>
<i>Preface</i>	<i>v</i>
1 Aging Power Delivery Infrastructures	1
1.1 What Are Aging Power Delivery Infrastructures?	1
1.2 Power Delivery, Not Power T&D	3
1.3 The Business Environment Has Changed	8
1.4 Five Factors Contribute to Aging Infrastructure Problems	11
1.5 Conclusion and Summary	31
References	34
2 Power Delivery Systems	37
2.1 Introduction	37
2.2 T&D System's Mission	38
2.3 The "Laws of T&D"	40
2.4 Levels of the T&D System	43
2.5 Utility Distribution Equipment	54
2.6 T&D Costs	60

x		Contents
2.7	Types of Delivery System Design	70
2.8	Conclusion	82
	References	86
3	Customer Demand for Power and Reliability of Service	87
3.1	The Two Qs: Quantity and Quality of Power	87
3.2	Electric Consumer Need for Quantity of Power	88
3.3	Electric Consumer Need for Quality of Power	97
3.4	Two-Q Analyses: Quantity and Quality of Power Are Both Important Aspects of Consumer Value	113
3.5	Conclusion and Summary	116
	References	117
4	Power System Reliability and Reliability of Service	119
4.1	Introduction	119
4.2	Outages Cause Interruptions	121
4.3	Reliability Indices	125
4.4	Reliability and Contingency Criteria for Planning	130
4.5	Cost Is King	136
4.6	Two-Q Analysis of Power Systems	140
4.7	Conclusion and Summary	142
	References	143
5	Cost and Economic Evaluation	145
5.1	Introduction	145
5.2	Costs	146
5.3	Time Value of Money	149
5.4	Decision Bases and Cost-Effectiveness Evaluation	165

5.5	Budget-Constrained Planning: Marginal Benefit vs. Cost Analysis	167
5.6	Conclusion	179
	References	180
6	Equipment Inspection, Testing, and Diagnostics	181
6.1	Introduction	181
6.2	Inspection, Testing, and Diagnostic Evaluation	182
6.3	Equipment Testing and Diagnosis Methods	189
6.4	Tests and Diagnosis of Insulating Oil	198
6.5	Summary and Final Comments	206
	References	206
7	Aging Equipment and Its Impacts	209
7.1	Introduction	209
7.2	Equipment Aging	210
7.3	Equipment Failure Rate Increases with Age	225
7.4	Impact of Escalating Failure Rates: What Do Aging Utility Equipment Bases Really Look Like?	232
7.5	Summary of Key Points	238
	For Further Reading	239
8	Obsolete System Structures	241
8.1	Introduction	241
8.2	Obsolete System Layouts	242
8.3	Impacts on Operating Characteristics at the Sub-transmission – Substation Level	249
8.4	Feeder System Impacts	254
8.5	The Concept of Feeder System “Strength”	262

8.6	"Fixes" for Outdated System Structures	268
8.7	Summary of Key Points	271
	References	272
9	Traditional Reliability Engineering Tools and Their Limitations	273
9.1	Introduction	273
9.2	Contingency-Based Planning Methods	274
9.3	Limitations of N-1 Methodology	280
9.4	Other Planning Related Concerns	293
9.5	The Problem Is Not High Utilization Rates	302
9.6	Summary and Conclusion	303
	References	306
10	Primary Distribution Planning and Engineering Interactions	309
10.1	Introduction	309
10.2	Distribution Planning and the Perceived Role of Distribution	310
10.3	Flexibility and Effectiveness in Feeder Level Planning	320
10.4	Conclusion	333
	References	334
11	Equipment Condition Assessment	337
11.1	Introduction	337
11.2	Power Transformers	338
11.3	Switchgear and Circuit Breakers	345
11.4	Underground Equipment and Cables	348
11.5	Overhead Lines and Associated Equipment	352
11.6	Service Transformers and Service Circuits	357
11.7	Evaluating and Prioritizing Equipment Condition	358

11.8	Summary and Final Comments	368
	References	369
12	Prioritization Methods for O&M	371
12.1	Introduction	371
12.2	Overview of Reliability-Centered Maintenance	372
12.3	Basic Reliability-Centered Prioritization	376
12.4	Prioritization of the <i>Type</i> of Maintenance	388
12.5	Practical Aspects for Implementation	396
12.6	Extending Reliability-Centered Prioritization to Other Operations Projects	404
12.7	Conclusion and Recommendations	410
	References	412
13	Planning Methods for Aging T&D Infrastructures	415
13.1	Introduction	415
13.2	Planning: Finding the Best Alternative	416
13.3	Short- and Long-Range Planning	425
13.4	The T&D Planning Process	435
13.5	The Systems Approach	454
13.6	Summary of Planning for Aging T&D Infrastructures	458
	References	459
14	Reliability Can Be Planned and Engineered	461
14.1	Introduction	461
14.2	Reliability Can Be Engineered	463
14.3	Methods for Distribution System Reliability Assessment	468

14.4	Application of Analytical Simulation for Detailed Reliability Assessment	472
14.5	Use of a Hybrid Analytical Simulation – Monte Carlo Method to Analyze Financial Risk	478
14.6	Conclusion and Key Points	486
	References and Further Reading	488
15	Strategy, Management and Decision-Making	491
15.1	Introduction	491
15.2	The Business Perspective on the Problem	492
15.3	Recommended Managerial Approach: Business-Case Based, Results-Driven Management	499
15.4	Aging Equipment and Systems – A Business Perspective	509
15.5	Conclusion and Summary	518
	References	520
16	Guidelines and Recommendations	521
16.1	Introduction	521
16.2	Five Interrelated Factors	521
16.3	Results-Driven Management	524
16.4	Recommended Solution Actions	527
16.5	Conclusion and Summary	543
	References	543
	<i>Index</i>	545
