Contents

Acknowledgements	ix
Preface to the second edition	xi
1 Introduction	1
Some tips before starting	3
Initial steps	6
The file registers	11
A program template	14
2 Exploring the PIC5x series	21
Your first program	21
Testing the program	23
Hardware	24
Simulating	27
Emulation	28
Blowing a PIC	28
Using the testing instructions	30
Timing	34
Seven-segment displays	48
Logic gates	71
The watchdog timer	78
Final instructions	83
Indirect addressing	83
The STATUS file register	87
The carry and digit carry flags	88
Pages	90
What caused the PIC to reset?	92
Some useful (but not vital) tricks	93
Final PIC5x program – ‘bike buddy’	95
3 Exploring the P16C71	100
Why use the P16C7x series?	100
The inner differences: an extra bank	101
A different way of setting up	103

New file registers	104
What are interrupts?	105
The program has interrupted ... what next?	107
A new program template	109
Analogue to digital conversion: what is it?	116
ADCON0	117
ADCON1	118
Some final points	123
Final PIC71 program	124
4 The new P12C50x series (8 pin PICs)	141
Why use the P12C50x series?	141
The main differences	141
A template for the P12C50x	144
Sample project	145
5 Exploring the P16C84	149
Why use the P16C84?	149
How is it different?	149
What is an EEPROM?	151
EECON1	152
INTCON	155
6 A PIC development environment	167
7 Looking to the future	169
Programming tips	169
8 Sample programs	171
Program A LedOn – Turns an LED on	171
Program B PushButton (1.0) – If a push button is pressed, turns on an LED	172
Program C PushButton (2.0) – Shorter version of PushButton 1.0	173
Program D Timing – LED states toggled every second, and buzzer on every five seconds	174
Program E Traffic – Pedestrian traffic lights junction is simulated	177
Program F Counter (1.0) – Counts signals from a push button, resets after 16	179
Program G Counter (2.0) – Stop reading button twice (otherwise, as Counter 1.0)	181
Program H Counter (3.0) – Solves button bounce (otherwise, as Counter 2.0)	183
Program I StopClock – A stop clock displaying tenths of seconds to minutes	185

Program J	LogicGates – Acts as the eight different gates	190
Program K	Alarm – An alarm system which can be set or disabled	193
Program L	BikeBuddy – A speedometer and mileometer for bikes	194
Program M	Quiz – Indicates which of four push buttons has been pressed first	200
Program N	TempSense – Displays whether temperature is too hot, too cold or OK	202
Program O	RanLott – A multipurpose random number generator	204
Program P	Diamond – An electronic diamond brooch	218
Program Q	Phonecard – To act like a phonecard which decrements a file register	219
Appendix A	Specifications of some PICs	224
Appendix B	Pin layouts of various PICs	225
Appendix C	Quick reference	226
Appendix D	If all else fails, read this	235
Appendix E	Some useful contact information	236
Appendix F	References and further reading	237
Appendix G	Answers to the exercises	238
Index		267
