

# Embedded Microcontrollers

Todd D. Morton

# Contents

## ► PART 1 Introduction

### **1 Introduction to Microcontrollers 1**

- 1.1 The Microcomputer 3
- 1.2 The 68HC11 and 68HC12 Microcontrollers 14
- 1.3 Historical Context 14
- 1.4 Software and Hardware Development 15
- Summary 22
- Exercises 22

## ► PART 2 Assembly Language Programming

### **2 Programming Basics 24**

- 2.1 Programming Languages 24
- 2.2 Types of Program Segments 30
- 2.3 Software Construction 31
- Summary 34
- Exercises 34

### **3 Simple Assembly Code Construction 35**

- 3.1 Assembly Source Code 37
- 3.2 A Basic Build Process 47

3.3	Run-Time Debugging—A Tutorial	52
	Summary	59
	Exercises	60

#### **4 CPU12 Programming Model 61**

4.1	The CPU Register Set	61
4.2	CPU12 Addressing Modes	64
4.3	The CPU12 Instruction Set	77
	Summary	78
	Exercises	78

#### **5 Basic Assembly Programming Techniques 80**

5.1	Data Transfer	80
5.2	Using the Stack	86
5.3	Basic Arithmetic Programming	92
5.4	Shifting and Rotating	105
5.5	Boolean Logic, Bit Testing, and Bit Manipulation	106
5.6	Branches and Jumps	113
5.7	Subroutines	120
5.8	Position Independence	128
	Summary	132
	Exercises	132

#### **6 Assembly Program Design and Structure 137**

6.1	Design and Documentation Tools	138
6.2	Structured Control Constructs	143
6.3	Data Storage	155
6.4	Program Structure	162
6.5	Passing Parameters	163
	Summary	172
	Exercises	173

#### **7 Assembly Applications 174**

7.1	Software Delay Routines	174
7.2	I/O Data Conversions	180
7.3	Basic I/O Routines	194
7.4	Fixed-Point Arithmetic	208
	Summary	229
	Exercises	229

### **► PART 3 Microcontroller Hardware and I/O**

#### **8 Introduction to Real-Time I/O and Multitasking 231**

8.1	Real-Time Systems	231
8.2	CPU Loads	233

- 8.3 I/O Detection and Response 234
- 8.4 Basic Cooperative Multitasking 261
- 8.5 Using CPU12 Interrupts 274
- 8.6 Basic Real-Time Debugging 289
  - Summary 293
  - Exercises 293

## **9 Microcontroller I/O Resources 295**

- 9.1 General Purpose I/O 296
- 9.2 Timers 306
- 9.3 Serial I/O 347
- 9.4 A-to-D Conversion 366
  - Summary 376
  - Exercises 376

## **10 The Final Product 378**

- 10.1 MCU Hardware Design 379
- 10.2 Reset Exceptions 386
- 10.3 M68HC912B32 Operating Modes 394
- 10.4 Configuration and Start-Up Code 400
- 10.5 Final Product Development 406
  - Summary 416
  - Exercises 417

## **11 System Expansion 418**

- 11.1 The Bus Cycle 419
- 11.2 Chip-Select Logic 421
- 11.3 Bus Timing Analysis 434
  - Summary 437
  - Exercises 438

## **► PART 4 Programming Microcontrollers in C**

### **12 Modular and C Code Construction 439**

- 12.1 C Source Code 440
- 12.2 The Modular Build Process 454
- 12.3 Source-Level Debugging 475
  - Summary 481
  - Exercises 481

### **13 Creating and Accessing Data in C 483**

- 13.1 Introduction to Data Types 484
- 13.2 ANSI-C Data Types 485
- 13.3 Variables and Stored Constants 494

13.4	Pointers	498
13.5	Arrays and Strings	503
13.6	Structures	507
13.7	Enumerated Types	509
13.8	Bit Operations	509
	Summary	516
	Exercises	517

## **14 C Program Structures 518**

14.1	Control Structures	518
14.2	Functions	536
14.3	Modules	548
14.4	Start-Up and Initialization	557
	Summary	564
	Exercises	564

## **► PART 5 Real-Time Multitasking Kernels**

### **15 Real-Time Multitasking in C 566**

15.1	Real-Time Programming Review	566
15.2	Real-Time Kernel Overview	570
15.3	Cooperative Kernel Design	574
	Summary	591
	Exercises	592

### **16 Using the MicroC/OS-II Preemptive Kernel 594**

16.1	Overview	595
16.2	Tasks and Task Switching	603
16.3	Interrupt Service Routines	609
16.4	Timers	610
16.5	Intertask Communication	614
16.6	μC/OS-Based Stopwatch Program	638
	Summary	645
	Exercises	646

## **► APPENDICES**

### **A Programming Conventions 648**

### **B Basic I/O 651**

### **C uC/OS Reference 672**

## **► REFERENCES 685**

## **► INDEX 687**
