Preface xi
List of Problems xiii

Chapter 1. Basic Electrical Working Definitions and Concepts 1

Voltage as Potential Difference 1
Current 3
Resistance 4
Direct-Current (dc) Voltage Sources 4
Direct and Alternating Current 5
dc Voltage 6
Current Flow in a Resistive Circuit 15
Current Flow in a Series Resistive Circuit 16
Voltage Division in a Series Circuit 18
Power Rating of a Resistor 18
ac Voltage 23
ac Circuits with Resistance 23
ac Phase Angle and Power 26
Current and Power in a Single-Phase ac Circuit 33
Current and Power in a Three-Phase ac Circuit 33
Inductive Reactance 42
Capacitive Reactance 46
Impedance 52

Chapter 2. Three-Phase Systems 55

Wye-Connected Systems 58
Delta-Connected Systems 60

Chapter 3. Mathematics for Electrical Calculations, Power Factor Correction, and Harmonics 69

Changing Vectors from Rectangular to Polar Form and Back Again 69
Adding Vectors 70
Multiplying or Dividing Vectors 74
Solving for Current and Power Factor in an ac Circuit Containing Only Inductive Reactance 75
Solving for Current and Power Factor in an ac Circuit Containing Both Inductive Reactance and Resistance in Series with One Another 77
Solving for Current and Power Factor in an ac Circuit Containing Two Parallel Branches That Both Have Inductive Reactance and Resistance in Series with One Another 77
Solving for Current and Power Factor in an ac Circuit Containing Parallel Branches, One of Which Has Inductive Reactance and Resistance in Series with One Another and the Other of Which Has a Capacitive Reactance 79
Electrical Power in Common ac Circuits 79
Power Factor Correction to Normal Limits 87
Real Power (Kilowatts), Apparent Power (Kilovoltamperes), Demand, and the Electrical Utility Bill 90
Power Factor Correction System Design in an Electrical Power System Containing No Harmonics 93
Power Factor Correction System Design in an Electrical Power System Containing Harmonics 104
Calculating the Parallel Harmonic Resonance of an Electrical Power System Containing Capacitors 107
Resulting Values of Adding Harmonic Currents or Voltages 108
Acceptable Levels of Harmonic Current and Voltage 110
The Harmonic Current-Flow Model 111
Effects of Harmonic Current on Transformers 114
Effects of Harmonic Voltage on Motors 116
Harmonic Current Flow through Transformers 116
Harmonic Filters 117
Harmonics Symptoms, Causes, and Remedies 122

Chapter 4. Conductors 125

Conductors, Conductor Resistance, Conductor and Cable Impedance, and Voltage Drop 125
Calculating the One-Way Resistance of a Wire 125
Calculating the Impedance of a Cable 133
Calculating Voltage Drop in a Cable 140

Calculating dc Resistance in a Bus Bar 143
Calculating Heat Loss in a Conductor 143
Wires and Cables 143
Determining Wire Size Given Insulation Type, Circuit Breaker Clearing Time, and Short Circuit Current 160
Selecting the Proper Insulation for an Environment 161
Aluminum Conductors 170
Conductor and Cable Selection 170

Chapter 5. Short-Circuit Calculations 179

Sources of Short-Circuit Current 182
The Ability of the Electrical Utility System to Produce Short-Circuit Current 183
Short-Circuit Contributions of On-Site Generators 184
Short-Circuit Contributions of Motors 185
Let-Through Values of Transformers 187
Let-Through Values of Reactors 188
Let-Through Power Values of Cables 189
Sample Short-Circuit Calculation 190

Chapter 6. Generator Sizing Calculations 195

Sizing a Gas-Turbine Generator Set for a Known Kilowatt Load 196
Sizing a Reciprocating Engine-Driven Generator Set for a Known Kilowatt Load 198
Sizing of Generator Feeder Conductors 200

Chapter 7. Grounding 205

The Functions of Grounding 205
Calculating the Resistance to Remote Earth of Ground Rods 208
Grounding-Electrode Conductors 211
Equipment-Grounding Conductors 211
Methods of Grounding Systems 215
Obtaining the System Grounding Point 217

Chapter 8. Lighting 221

The Lumen Method 221
The Point-by-Point Method 223
Indoor Lighting 229
Lighting Rules of Thumb 245

Chapter 9. Transformers 251

Three-Phase Transformers 255
Overcurrent Protection of Transformers 265
Buck-Boost Autotransformers 275

Chapter 10. Motors 285

Selecting Motor Characteristics 286
Calculating Motor Running Current 295
Calculating Motor Branch-Circuit Overcurrent Protection and Wire Size 296

Chapter 11. Raceways 311

Raceway Types and Their Characteristics 311

Chapter 12. Overcurrent Devices 319

Overcurrent Devices: Fuses and Circuit Breakers 319
Fuses 321
Circuit Breakers 323
Medium-Voltage and Special-Purpose Circuit Breakers and Relay Controllers 325

Chapter 13. Circuits for Special Loads 335

Designing Circuits for Various Electrical Loads 335
Designing an Electrical System for a Commercial Building 339
Designing an Electrical System for an Industrial Facility 349

Chapter 14. Electrical Design and Layout Calculations 357

Straight-Through Pull Box in a Conduit System 357
Angle Pull Box in a Conduit System 358
Working Space Surrounding Electrical Equipment 358
Minimum Centerline-to-Centerline Dimensions of Knockouts to Provide for Locknut Clearance 364

Chapter 15. Electrical Cost Estimating 371

Electrical Takeoff and Personnel-Hour Cost Estimating 371
Factoring of Labor Units 397
Estimate of Project Expense 409

Engineering Economics Calculations Considering the Time Value of Money 411

Chapter 16. Conversion Calculations 425

Temperature Conversion Calculations 425
Frequently Used Conversion Calculations 425
Multiple Conversion Calculations 425

Index 433
