

Silicon-Containing Polymers

The Science and Technology of
Their Synthesis and Applications

Richard G. Jones, Wataru Ando and
Julian Chojnowski (Eds.)

Kluwer Academic Publishers

TABLE OF CONTENTS

LIST OF CONTRIBUTORS	xiii
PREFACE	xvii
ACKNOWLEDGEMENTS	xx

SECTION 1 : POLYSILOXANES

Editor: J. Chojnowski 1

1- SYNTHESIS OF LINEAR POLYSILOXANES 3

J. Chojnowski and M. Cypryk

1. Introduction 3
2. The Siloxane Bond - Structural Considerations 3
3. Precursors of Polysiloxanes 4
4. Industrial Synthesis of Polysiloxanes from Chlorosilanes 5
5. Polysiloxanes by Polycondensation Routes 6
6. Ring-Opening Polymerisation of Cyclic Siloxanes 17

2- ORGANOSILOXANE BLOCK AND GRAFT COPOLYMERS 43

G. Belorgey and G. Sauvet

1. Introduction 43
2. Synthesis of Siloxane-Organic Copolymers 43
3. Phase Separation 63
4. Mechanical Properties 68
5. Surface Properties 70
6. End-use Properties and Applications 72
7. Conclusion 74

3- SIDE GROUP MODIFIED POLYSILOXANES 79

B. Boutevin, F. Guida-Pietrasanta and A. Ratsimihety

1. Introduction 79
2. Synthesis of Polysiloxanes Modified in Side Groups 80
3. Applications 105
4. Conclusion and Perspectives 107

4-	SILICONE COPOLYMER NETWORKS AND INTERPENETRATING POLYMER NETWORKS	113
	<i>M. Mazurek</i>	
1.	Introduction	113
2.	Interpenetrating Polymer Networks and Copolymer Networks	115
3.	Silicone Interpenetrating Polymer Networks	117
4.	Silicone Copolymer Networks	126
5.	Other Network Structures	131
6.	Applications	131
7.	Future Trends	133
5-	PREPARATION AND PROPERTIES OF SILICONE ELASTOMERS	139
	<i>S. J. Clarson</i>	
1.	Introduction	139
2.	Preparation of Silicone Elastomers	140
3.	Elasticity Theories	141
4.	The Flory-Erman Model	142
5.	Equilibrium Stress-Strain Behaviour of Silicone Elastomers	142
6.	Stress-Strain Behaviour of Silicone Elastomers in the Swollen State	145
7.	Equilibrium Swelling of Silicone Elastomers	146
8.	Tear Strength of Silicone Elastomers	147
9.	Adhesion of Silicone Elastomers to Substrates	149
10.	Networks with Bimodal Distributions of Chain Lengths between Junctions	149
11.	Stereoregular Siloxane Elastomers	151
6-	POLYSILSESQUIOXANES	157
	<i>R. H. Baney and X. Cao</i>	
1.	Introduction	157
2.	General Considerations in the Preparation of Polysilsesquioxanes	159
3.	Poly(phenylsilsesquioxane)s	160
4.	Poly(methylsilsesquioxane)s	164
5.	Other Polysilsesquioxanes	166
6.	Bridged Polysilsesquioxanes	166
7.	Cage Silsesquioxanes	167
8.	Structure of polysilsesquioxanes	175
9.	Applications	178

7. THERMAL PROPERTIES OF POLYSILOXANES	185
<i>P.R. Dvornic</i>	
1. Introduction	185
2. Structural Characteristics of Polysiloxanes that Determine their Thermal Behaviour	186
3. Thermal Properties of Polysiloxanes at Low Temperatures	194
4. High Temperature Degradation and Stability	200
8. SURFACE PROPERTIES AND APPLICATIONS	213
<i>M. J. Owen</i>	
1. Introduction	213
2. Fundamental Physical Characteristics	215
3. PDMS Surface Data Survey	218
4. Fluorosilicones	221
5. Surface Applications	222
6. Future Applications	229
9. POLYSILOXANES: DIRECTION OF APPLICATIONS AND PERSPECTIVES	233
<i>D. Graiver and G. Fearon</i>	
 SECTION 2 : POLYCARBOSILANES AND POLYSILAZANES	
<i>Editor: R. G. Jones</i>	245
10 - POLYCARBOSILANES	247
<i>L. V. Interrante and Q. Shen</i>	
1. Introduction	247
2. Recent Advances in the Methodology for Preparing Carbosilanes	249
3. Polycarbosilanes as SiC Precursors	266
4. Linear Polycarbosilanes	274
11 - POLYSILAZANES	323
<i>A. Soum</i>	
1. Introduction	323
2. Polymerisation of Organosilazanes	325
3. Structure and Thermal Properties of Polysilazanes	342
4. Properties of Polysilazanes	345
5. Potential Applications of Polysilazanes	347

SECTION 3 : POLYSILANES AND RELATED POLYMERS*Editor: R. G. Jones***351****12 - SYNTHESIS OF POLYSILANES BY THE WURTZ REDUCTIVE-COUPPLING REACTION****353***R. G. Jones and S. J. Holdar*

- | | |
|--|-----|
| 1. Introduction | 353 |
| 2. Alkali Metals Dispersions and Addition Procedures | 354 |
| 3. Solvents and Additives | 357 |
| 4. Temperature Effects | 358 |
| 5. Reagent Distribution | 360 |
| 6. Mechanistic Considerations and a Unifying Model | 361 |

13 - SYNTHESIS OF POLYSILANES BY NEW PROCEDURES: PART 1 RING-OPENING POLYMERISATIONS AND THE POLYMERISATION OF MASKED DISILENES**375***H. Sakurai and M. Yoshida*

- | | |
|---|-----|
| 1. Introduction | 375 |
| 2. Catalytic Disproportionation of Functionalised Disilanes | 377 |
| 3. Ring-Opening Polymerisation of Small Rings | 377 |
| 4. Anionic Polymerisation of Masked Disilenes | 384 |

14 - SYNTHESIS OF POLYSILANES BY NEW PROCEDURES: PART 2 CATALYTIC DEHYDRO-POLYMERISATION OF HYDROSILANES**401***G. M. Gray and J. Y. Corey*

- | | |
|---|-----|
| 1. Introduction | 401 |
| 2. Catalytic Dehydrocoupling of Silanes | 402 |
| 3. Mechanistic Studies | 410 |
| 4. Properties and Reactions of Poly(hydrosilane)s | 414 |
| 5. Conclusion | 416 |

15 - MODIFICATION AND FUNCTIONALISATION OF POLYSILANES**419***M. J. Went, H. Sakurai and T. Sanji*

- | | |
|--|-----|
| 1. Introduction | 419 |
| 2. Incorporation of Organic Substituents | 420 |
| 3. Incorporation of Metallic Functional Groups | 427 |
| 4. Incorporation of Polymeric Substituents | 429 |

16 - HYDROSILYLATION AND SILYLATION IN ORGANOSILICON POLYMER SYNTHESIS	439
<i>M. Tanaka and Y. Hatanaka</i>	
1. Introduction	439
2. Hydrosilylation in Organosilicon Polymer Synthesis	439
3. Synthesis of Polysilanes by Transition-Metal-Catalysed Dehydrocoupling Reaction of Hydrosilanes	444
4. Electrochemical Routes to Organosilicon Polymers	449
5. Other Metal-Complex-Catalysed Synthesis of Organosilicon Polymers	454
17 - SIGMA- AND PI-CONJUGATED ORGANOSILICON POLYMERS	461
<i>S. Yamaguchi and K. Tamao</i>	
1. Introduction	461
2. Polymer Consisting of Oligosilylene Units and π -Electron Systems	461
3. π -Conjugated Polymers Based on Silicon-Containing Cycles	485
4. Silole-Based σ - and π -Conjugated Oligomers and Polymers	487
5. Conclusion	494
18 - ELECTRONIC STRUCTURE AND SPECTROSCOPY OF POLYSILANES	499
<i>J. Michl and R. West</i>	
1. Introduction	499
2. Oligomers	499
3. Polysilane High Polymers	509
4. A Note on the Photochemistry of Polysilanes	524
19 - ELECTRONIC AND OPTICAL PROPERTIES IN DEVICE APPLICATIONS OF POLYSILANES	531
<i>N. Matsumoto, H. Suzuki and H. Miyazaki</i>	
1. Introduction	531
2. Electronic Structures of Polysilanes	531
3. Electroluminescent Properties and an Application to Electroluminescent Devices	535
4. Photo-conductive Properties and Application to Photoreceptors	545
5. Conclusions	550

20 - THERMAL PROPERTIES AND PHASE BEHAVIOUR OF POLYSILANES	553
<i>S. Demoustier-Champagne and J. Devaux</i>	
1. Introduction	553
2. Thermal Characterisation of Poly(methyl- <i>n</i> -propylsilane)	555
3. Crystalline Structure of Poly(methyl- <i>n</i> -propylsilane)	557
4. Microstructural Characterisation of Poly(methyl- <i>n</i> -propylsilane)	559
5. WAXS Measured Crystallisation Kinetics of Poly(methyl- <i>n</i> -propylsilane)	560
6. Thermal Characterisation of Poly(methylphenylsilane)	563
7. Structural analysis of Poly(methylphenylsilane)	566
8. Conclusions	571
SECTION 4 : SPECIAL TOPICS	575
<i>Editor: W. Ando</i>	
21 - SILICON-CONTAINING VINYL MONOMERS AND POLYMERS	577
<i>Y. Nagasaki</i>	
1. Introduction	577
2. Monomer Synthesis	577
3. Polymerisations	581
22 - LIQUID CRYSTALLINE SILICON-CONTAINING POLYMERS	593
<i>D. Teyssté and S. Boileau</i>	
1. Introduction	593
2. Synthesis	594
3. Poly(di- <i>n</i> -alkylsiloxane)s	597
4. Cyclic Siloxanes	599
5. Silsesquioxanes	600
6. Ferroelectric Liquid Crystalline Polysiloxanes	602
7. Elastomeric Networks	606
8. Characterisation	608
9. Conclusion	610

23 - ORGANOSILICON DENDRIMERS: MOLECULES WITH MANY POSSIBILITIES	615
<i>S. W. Krska, D. Y. Son and D. Seyferth</i>	
1. Introduction	615
2. Synthesis and Characterisation	616
3. Functionalisation of Organosilicon Dendrimers	627
4. Physical Properties and Applications of Organosilicon Dendrimers	636
5. Conclusions	639
24 - OPTICALLY ACTIVE SILICON-CONTAINING POLYMERS	643
<i>M. Fujiki and J. R. Koe</i>	
1. Introduction	643
2. Optically Active Polysilanes	646
3. Other Si-containing Polymers – Polysiloxanes	657
4. Potential Applications	657
5. Future Directives	659
6. Helix-Helix Transition in Optically Active Polysilanes	662
25 - ORGANOSILICATE OLIGOMERS AND NANOSTRUCTURED MATERIALS	667
<i>R. J. P. Corriu and W. E. Douglas</i>	
1. Introduction and Definitions	667
2. The Sol-Gel Process Considered as Inorganic Polymerisation	668
3. Monosubstituted Systems - Silsesquioxanes (RSiO _{1.5})	671
4. Nanostructured Organic-Inorganic Hybrid Materials: Scope and Limitations	674
5. Identification	675
6. Nanostructural Materials: The Kinetic Control of the Solid	679
7. Short Range Organisation in the Solid	681
8. Control of the Porosity in Silica by Organic Templates	686
9. Conclusion	692
26 - PRECERAMIC POLYMER - DERIVED SILICON OXYCARBIDES	697
<i>G. A. Zank</i>	
1. Introduction	697
2. Synthesis of Silicon Oxycarbide	699
3. Structure of Silicon Oxycarbide	709
4. Silicon Oxycarbide Composition Control	713
5. Reaction Chemistry of Silicon Oxycarbides	718
6. Applications of Silicon Oxycarbides	721
7. Summary	723

27 - PLASMA PROCESSING OF SILICON-CONTAINING MONOMERS	727
<i>F. Schué and A. Mas</i>	
1. Fundamentals of Plasma Chemistry	727
2. Synthesis of Silicon-containing Polymer Films in Plasma	729
3. Corrosion Protection by Plasma-Polymerised Coatings	733
4. Permeation Properties through Plasma Polymer Films	735
5. Plasma Polymerised Silicone Coatings	738
6. Conclusion	741
28 - MICROLITHOGRAPHIC APPLICATIONS OF ORGANOSILICON POLYMERS	743
<i>E. Reichmants, A. E. Novembre, O. Nalamasu and G. Dabbagh</i>	
1. Introduction	743
2. Lithographic Applications	745
3. Chemistry	748
4. Conclusions	758
