1. The cytoskeleton in the transduction of signal and regulation of cellular function	1
<i>Coralie A. Carothers Carraway</i>	
1. Introduction	1
2. Model systems	3
3. Approaches and techniques	3
References	7
 2. Assaying binding and covalent modifications of cytoskeletal proteins	 9
<i>Christophe Ampe and Joël Vandekerckhove</i>	
1. Introduction	9
2. How to identify actin-binding regions in known actin-binding domains or proteins	10
Information on actin-binding residues can be derived from sequence comparison	10
Crystal structures of actin-binding proteins and calculated models help to design mutants	10
3. Actin peptide mimetics	12
4. Creation of mutants using recombinant technology	19
Mutagenesis using the polymerase chain reaction	20
A few considerations when working with recombinant proteins	21
Phage display of an actin-binding protein	21
5. Analysis of actin-binding proteins for PIP ₂ interaction	28
6. Post-translational modifications and identification of phosphorylation sites using mass spectrometry	30
7. Conclusions	33
Acknowledgements	34
References	34

3. Methods to study actin assembly and dynamics in yeast	37
<i>Tatiana S. Karpova and John A. Cooper</i>	
1. Introduction: yeast as a model organism for studies of the actin cytoskeleton	37
2. Measurements of F-actin and G-actin <i>in vivo</i>	38
3. Measurements of assembly and disassembly of F-actin <i>in vitro</i> and <i>in vivo</i>	41
4. Actin structures in live cells	43
Video microscopy of GFP-tagged actin and actin-binding proteins	43
Microscopy of GFP-tagged patches	45
Use of inhibitors to study actin dynamics and functions <i>in vivo</i>	46
5. Binding of proteins to actin filaments	47
6. Conclusions: tests of actin assembly and dynamics applied to studies of wild-type and mutant actin cytoskeletal proteins	48
References	50
 4. Signalling complexes: association of signalling proteins with the cytoskeleton	 51
<i>Coralie A. Carothers Carraway and Kermit L. Carraway</i>	
1. Introduction	51
2. Co-localization by microscopy	51
3. Co-localization by co-purification	53
Association with plasma membranes	55
Cytoskeletal preparations	57
Membrane skeletons	59
4. Co-localization by co-immunoprecipitation	67
5. Reconstitution	70
6. Perspectives	74
References	75
 5. Ras-related GTPases and the cytoskeleton	 79
<i>Anne J. Ridley and Helen M. Flinn</i>	
1. Introduction	79

Contents

2. Introduction of recombinant proteins into cells	81
Purification of recombinant proteins	82
Microinjection of cells	84
Scrape loading of recombinant proteins into cells	87
3. Microinjection of DNA into cells	89
4. Immunolocalization analyses of injected cells and analysis of cytoskeletal changes	90
5. Use of Rho GTPase mutants to analyse functional domains	94
Point mutations	94
Chimeric proteins	95
6. Analysis of the function of interacting partners of Rho GTPases	95
7. Conclusions and prospects	96
References	96
 5. Applications for analysis of contractile functions in dividing and migrating tissue culture cells	 101
<i>Douglas J. Fishkind, Irina Romenskaia, Yun Bao, and Christine M. Manubay</i>	
1. Introduction	101
2. Single-particle tracking assays for analysis of cortical actin flow in dividing cells	102
3. Green fluorescent protein (GFP)-tagged fusion proteins as reporters for <i>in vivo</i> contractile functions in tissue culture cells	108
Calcium phosphate transfections	109
Lipofectin-transferrin-mediated transfections	110
Analysis of GFP in live tissue culture cells	112
Analysis of GFP-fusion proteins in fixed cells	114
Analysis of GFP expressed fusion products	115
4. Methods for analysing actin filament and myosin II organization in motile and dividing cells	116
Mathematical relationship between FDLN values and the angular distribution of filaments	119
5. Summary and prospects	121
Acknowledgements	121
References	121

7. Video microscopy: protocols for examining the actin-based motility of <i>Listeria</i>, <i>Shigella</i>, vaccinia, and lanthanum-induced endosomes	125
<i>W. L. Zeile, D. L. Purich, and F. S. Southwick</i>	
1. Introduction	125
2. Biological preparations for intracellular motility experiments	126
Mammalian host cells and cell culture conditions	126
Isolation and cell culture of mouse bone marrow macrophages	128
Culturing conditions for infective preparations of <i>Listeria</i> , <i>Shigella</i> , and vaccinia	130
Infection of PtK2 or HeLa cells by <i>Listeria</i> and <i>Shigella</i>	134
Infection of host cells with vaccinia virus	137
Lanthanum/zinc treatment of mouse bone marrow macrophages to induce endosomal rocketing	140
3. Observation, manipulation, and measurement of intracellular motility by video microscopy	142
Time-lapse phase-contrast imaging	142
Microinjection	145
Immunolocalization of key components of cellular movement	150
Image analysis and data presentation	154
4. Concluding remarks	157
References	157
8. Structural studies on tubulin and microtubules	159
<i>Kenneth H. Downing</i>	
1. Introduction	159
Developments in electron microscopy	160
2. Microtubules	161
Sample preparations for electron microscopy	164
Images of microtubules	166
3. Motor molecules	167
4. 3D reconstruction of helical structures	170
5. Tubulin structure	171
6. 3D structure determination from 2D crystals	173
Diffraction	173
Images	175
Three-dimensional reconstruction	177

7. Drug binding studies	178
8. Protein-protein interactions	179
References	180
9. Regulation of intermediate filament dynamics: a novel approach using site- and phosphorylation state-specific antibodies	183
<i>Hiroyasu Inada, Koh-ichi Nagata, Hidemasa Goto, and Masaki Inagaki</i>	
1. Introduction	183
2. Regulation of IFs by site-specific phosphorylation <i>in vitro</i>	185
Chromatographic purification of IF proteins	185
Phosphorylation assay	187
Effect of phosphorylation on IF filaments structure <i>in vitro</i>	188
Detection of phosphorylation sites	191
3. Cell biology of IFs	193
Preparation of site- and phosphorylation state-specific antibodies for phosphopeptides	193
Visualization of phosphorylation state of IF proteins and identification of IF kinases <i>in vivo</i>	199
4. Conclusion	203
Acknowledgements	203
References	203
10. The study of mRNA-cytoskeleton interactions and mRNA sorting in mammalian cells	209
<i>Giovanna Bermano and John E. Hesketh</i>	
1. Introduction	209
2. Biochemical approaches to mRNA-cytoskeleton interactions	212
mRNAs and polysomes in the cell matrix	212
Identification of polysomes and mRNAs associated with the cytoskeleton	212
Cytoskeletal-bound polysomes	213
3. Localization of mRNA by <i>in situ</i> hybridization (ISH)	217
Non-radioactive hybridization methods	217
Choosing the right probe for ISH	219
Key features of an ISH protocol	223
Advantages and disadvantages of the different detection systems	228
Interpretation and limitations of ISH	229
Quantification of localization signal	231

4. Co-localization studies	232
5. Localization signals in mRNAs	234
The use of reporter genes to study localization signals	235
Different reporter genes	237
6. mRNA transport	238
7. The biochemistry of RNA–cytoskeleton interactions: RNA-binding proteins	239
8. Future developments	242
Acknowledgements	243
References	243
 11. Cell shape control and mechanical signalling through the cytoskeleton	 245
<i>Wolfgang H. Goldmann, José Luis Alonso, Krzysztof Bojanowski, Clifford Brangwynne, Christopher S. Chen, Marina E. Chicurel, Laura Dike, Sui Huang, Kyung-Mi Lee, Andrew Maniotis, Robert Mannix, Helen McNamee, Christian J. Meyer, Keiji Naruse, Kevin Kit Parker, George Plopper, Thomas Polte, Ning Wang, Li Yan, and Donald E. Ingber</i>	
1. Introduction	245
2. Application of techniques	246
Control of cell shape by varying extracellular matrix density	246
Analysis of focal adhesion formation and integrin signalling	248
Geometric control of cell shape and function	252
Analysis of transmembrane mechanical signalling	261
Detection of long-range mechanical signal transfer	266
Analysing chromosomal connectivity and mechanics	271
3. Conclusion	273
Acknowledgements	274
References	274
