Table of Contents

PART I Overview

1 Computational Intelligence for Manufacturing

D. T. Pham · P. T. N. Pham

1.1	Introduction	1-1
1.2	Knowledge-Based Systems	1-1
1.3	Fuzzy Logic	1-4
1.4	Inductive Learning.....	1-7
1.5	Neural Networks	1-11
1.6	Genetic Algorithms.....	1-15
1.7	Some Applications in Engineering and Manufacture.....	1-19
1.8	Conclusion	1-25

2 Neural Network Applications in Intelligent Manufacturing: An Updated Survey

Jun Wang · Wai Sum Tang · Catherine Roze

2.1	Introduction	2-1
2.2	Modeling and Design of Manufacturing Systems.....	2-3
2.3	Modeling, Planning, and Scheduling of Manufacturing Processes.....	2-10
2.4	Monitoring and Control of Manufacturing Processes	2-14
2.5	Quality Control, Quality Assurance, and Fault Diagnosis	2-18
2.6	Concluding Remarks	2-23

3 Holonic Metamorphic Architectures for Manufacturing: Identifying Holonic Structures in Multiagent Systems by Fuzzy Modeling

Michaela Ulieru · Dan Stefanoiu · Douglas Norrie

3.1	Introduction	3-1
3.2	Agent-Oriented Manufacturing Systems	3-2
3.3	The MetaMorph Project.....	3-3
3.4	Holonic Manufacturing Systems.....	3-9
3.5	Holonic Self-Organization of MetaMorph via Dynamic Virtual Clustering.....	3-11
3.6	Automatic Grouping of Agents into Holonic System: Simulation Results.....	3-14
3.7	MAS Self-Organization as a Holonic System: Simulation Results	3-26
3.8	Conclusions	3-36

PART II Manufacturing System Modeling and Design

4	Neural Network Applications for Group Technology and Cellular Manufacturing <i>Nallan C. Suresh</i>	
4.1	Introduction	4-1
4.2	Artificial Neural Networks	4-3
4.3	A Taxonomy of Neural Network Application for GT/CM.....	4-5
4.4	Conclusions	4-19
5	Application of Fuzzy Set Theory in Flexible Manufacturing System Design <i>A. Kazerooni · K. Abhary · L. H. S. Luong · F. T. S. Chan</i>	
5.1	Introduction	5-1
5.2	A Multi-Criterion Decision-Making Approach for Evaluation of Scheduling Rules	5-2
5.3	Justification of Representing Objectives with Fuzzy Sets	5-4
5.4	Decision Points and Associated Rules.....	5-4
5.5	A Hierarchical Structure for Evaluation of Scheduling Rules	5-4
5.6	A Fuzzy Approach to Operation Selection.....	5-11
5.7	Fuzzy-Based Part Dispatching Rules in FMSs	5-15
5.8	Fuzzy Expert System-Based Rules	5-17
5.9	Selection of Routing and Part Dispatching Using Membership Functions and Fuzzy Expert System-Based Rules	5-21
6	Genetic Algorithms in Manufacturing System Design <i>L. H. S. Luong · M. Kazerooni · K. Abhary</i>	
6.1	Introduction	6-1
6.2	The Design of Cellular Manufacturing Systems	6-2
6.3	The Concepts of Similarity Coefficients	6-4
6.4	A Genetic Algorithm for Finding the Optimum Process Routings for Parts.....	6-7
6.5	A Genetic Algorithm to Cluster Machines into Machine Groups.....	6-10
6.6	A Genetic Algorithm to Cluster Parts into Part Families	6-12
6.7	Layout Design	6-13
6.8	A Genetic Algorithm for Layout Optimization	6-14
6.9	A Case Study	6-16
6.10	Conclusion.....	6-19
7	Intelligent Design Retrieving Systems Using Neural Networks <i>C. Alec Chang · Chieh-Yuan Tsai</i>	
7.1	Introduction	7-1
7.2	Characteristics of Intelligent Design Retrieval.....	7-2
7.3	Structure of an Intelligent System.....	7-3
7.4	Performing Fuzzy Association.....	7-5
7.5	Implementation Example.....	7-5

PART III Process Planning and Scheduling

8 Soft Computing for Optimal Planning and Sequencing of Parallel Machining Operations

Yuan-Shin Lee · Nan-Chieh Chiu · Shu-Cherng Fang

8.1	Introduction	8-1
8.2	A Mixed Integer Program.....	8-3
8.3	A Genetic-Based Algorithm.....	8-5
8.4	Tabu Search for Sequencing Parallel Machining Operations.....	8-9
8.5	Two Reported Examples Solved by the Proposed GA	8-12
8.6	Two Reported Examples Solved by the Proposed Tabu Search	8-18
8.7	Random Problem Generator and Further Tests	8-22
8.8	Conclusion.....	8-26

9 Application of Genetic Algorithms and Simulated Annealing in Process Planning Optimization

Y. F. Zhang · A. Y. C. Nee

9.1	Introduction	9-1
9.2	Modeling Process Planning Problems in an Optimization Perspective.....	9-3
9.3	Applying a Genetic Algorithm to the Process Planning Problem	9-13
9.4	Applying Simulated Annealing to the Process Planning Problem	9-18
9.5	Comparison between the GA and the SA Algorithm	9-23
9.6	Conclusions	9-24

10 Production Planning and Scheduling Using Genetic Algorithms

Runwei Cheng · Mitsuo Gen

10.1	Introduction.....	10-1
10.2	Resource-Constrained Project Scheduling Problem	10-1
10.3	Parallel Machine Scheduling Problem	10-9
10.4	Job-Shop Scheduling Problem	10-17
10.5	Multistage Process Planning.....	10-25
10.6	Part Loading Scheduling Problem	10-28

PART IV Manufacturing Process Monitoring and Control

11 Neural Network Predictive Process Models: Three Diverse Manufacturing Applications

Sarah S. Y. Lam · Alice E. Smith

11.1	Introduction to Neural Network Predictive Process Models.....	11-1
11.2	Ceramic Slip Casting Application	11-2
11.3	Abrasive Flow Machining Application.....	11-4
11.4	Chemical Oxidation Application	11-9
11.5	Concluding Remarks	11-11

12 Neural Network Applications to Manufacturing Processes: Monitoring and Control

Hyung Suck Cho

12.1 Introduction	12-1
12.2 Manufacturing Process Monitoring and Control.....	12-2
12.3 Neural Network-Based Monitoring.....	12-6
12.4 Quality Monitoring Applications.....	12-10
12.5 Neural Network-Based Control	12-19
12.6 Process Control Applications.....	12-22
12.7 Conclusions	12-31

13 Computational Intelligence in Microelectronics Manufacturing

Gary S. May

13.1 Introduction	13-1
13.2 The Role of Computational Intelligence.....	13-2
13.3 Process Modeling.....	13-11
13.4 Optimization	13-19
13.5 Process Monitoring and Control	13-32
13.6 Process Diagnosis	13-41
13.7 Summary.....	13-52

14 Monitoring and Diagnosing Manufacturing Processes Using Fuzzy Set Theory

R. Du · Yangsheng Xu

14.1 Introduction	14-1
14.2 A Brief Description of Fuzzy Set Theory.....	14-2
14.3 Monitoring and Diagnosing Manufacturing Processes Using Fuzzy Sets.....	14-8
14.4 Application Examples.....	14-23
14.5 Conclusions	14-27

15 Fuzzy Neural Network and Wavelet for Tool Condition Monitoring

Xiaoli Li

15.1 Introduction	15-1
15.2 Fuzzy Neural Network.....	15-2
15.3 Wavelet Transforms	15-7
15.4 Tool Breakage Monitoring with Wavelet Transforms.....	15-10
15.5 Identification of Tool Wear States Using Fuzzy Method	15-12
15.6 Tool Wear Monitoring with Wavelet Transforms and Fuzzy Neural Network.....	15-23

PART V Quality Assurance and Fault Diagnosis

16	Neural Networks and Neural-Fuzzy Approaches in an In-Process Surface Roughness Recognition System for End Milling Operations <i>Joseph C. Chen</i>	
16.1	Introduction	16-1
16.2	Methodologies	16-2
16.3	Experimental Setup and Design	16-8
16.4	The In-Process Surface Roughness Recognition Systems.....	16-11
16.5	Testing Results and Conclusions.....	16-14
17	Intelligent Quality Controllers for On-Line Parameter Design <i>Ratna Babu Chinnam</i>	
17.1	Introduction	17-1
17.2	An Overview of Certain Emerging Technologies Relevant to On-Line Parameter Design	17-6
17.3	Design of Quality Controllers for On-Line Parameter Design.....	17-9
17.4	Case Study: Plasma Etching Process Modeling and On-Line Parameter Design.....	17-14
17.5	Conclusion.....	17-21
18	A Hybrid Neural Fuzzy System for Statistical Process Control <i>Shing I Chang</i>	
18.1	Statistical Process Control.....	18-1
18.2	Neural Network Control Charts	18-3
18.3	A Hybrid Neural Fuzzy Control Chart	18-4
18.4	Design, Operations, and Guidelines for Using the Proposed Hybrid Neural Fuzzy Control Chart	18-16
18.5	Properties of the Proposed Hybrid Neural Fuzzy Control Chart.....	18-18
18.6	Final Remarks	18-19
19	RClass*: A Prototype Rough-Set and Genetic Algorithms Enhanced Multi-Concept Classification System for Manufacturing Diagnosis <i>Li-Pheng Khoo · Lian-Yin Zhai</i>	
19.1	Introduction	19-1
19.2	Basic Notions	19-2
19.3	A Prototype Multi-Concept Classification System.....	19-7
19.4	Validation of RClass*	19-10
19.5	Application of RClass* to Manufacturing Diagnosis.....	19-12
19.6	Conclusions	19-16
	Index	I-1
