Hill

Contents(*)

Preface	xi
Acknowledgements	xv
Definitions	xvii

Chapter 1. Transverse Vibration Equations

1.1 Average values and resolving equations	2
1.2 Fundamental theories and approaches	3
References	12

Chapter 2. Analysis Methods

2.1 Reciprocal theorems	16
2.2 Displacement computation techniques	19
2.3 Analysis methods	27
References	55

Chapter 3. Fundamental Equations of Classical Beam Theory

3.1 Mathematical models for transversal vibrations of uniform beams	60
3.2 Boundary conditions	64
3.3 Compatibility conditions	67
3.4 Energy expressions	67
3.5 Properties of eigenfunctions	70
3.6 Orthogonal eigenfunctions in interval $z_1 - z_2$	75
3.7 Mechanical models of elastic systems	76
3.8 Models of materials	81
3.9 Mechanical impedance of boundary conditions	83
3.10 Fundamental functions of the vibrating beams	84
References	91

(*) Detailed subdivision for each Chapter see in corresponding Chapter.

Chapter 4. Special Functions for the Dynamical Calculation of Beams and Frames

4.1 Krylov–Duncan functions	96
4.2 Dynamical reactions of massless elements with one lumped mass	108
4.3 Dynamical reactions of beams with distributed masses	111
4.4 Dynamical reactions of beams with distributed masses and one lumped mass	121
4.5 Frequency functions (Hoheneanser–Prager's functions)	124
4.6 Displacement influence functions	127
References	128

Chapter 5. Bernoulli–Euler Uniform Beams with Classical Boundary Conditions

5.1 Classical methods of analysis	130
5.2 One-span beams	141
5.3 One-span beams with overhang	147
5.4 Fundamental integrals	149
5.5 Love and Bernoulli–Euler beams, frequency equations and numerical results	152
References	158

Chapter 6. Bernoulli–Euler Uniform One-Span Beams with Elastic Supports

6.1 Beams with elastic supports at both ends	160
6.2 Beams with a translational spring at the free end	165
6.3 Beams with translational and torsional springs at one end	175
6.4 Beams with a torsional spring at the pinned end	181
6.5 Beams with sliding-spring supports	186
6.6 Beams with translational and torsional spring supports at the each end	190
6.7 Free-free beam with translational spring support at the middle span	192
Reference	194

Chapter 7. Bernoulli–Euler Beams with Lumped and Rotational Masses

7.1 Simply-supported beam	196
7.2 Beams with overhangs	204
7.3 Clamped beam with a lumped mass along the span	206
7.4 Free-free beams	209
7.5 Beams with different boundary conditions at one end and lumped mass at the free end	213
7.6 Beams with different boundary conditions and a lumped masses	222
7.7 Modal shape vibrations for beams with classical boundary conditions	225

7.8	Beams with classical boundary conditions at one end and a translational spring support and lumped mass at the other	230
7.9	Beams with rotational mass	233
7.10	Beams with rotational and lumped masses	238
7.11	Beams with attached body of a finite length	238
7.12	Pinned-elastic support beam with an overhang and lumped masses	244
	References	245

Chapter 8. Bernoulli–Euler Beams on Elastic Linear Foundation

8.1	Models of foundation	248
8.2	Uniform Bernoulli–Euler beams on an elastic Winkler foundation	250
8.3	Pinned-pinned beam under compressive load	254
8.4	A stepped Bernoulli–Euler beam subjected to an axial force and embedded in a non-homogeneous Winkler foundation	256
8.5	Infinite uniform Bernoulli–Euler beam with lumped mass on elastic Winkler foundation	258
	References	258

Chapter 9. Bernoulli–Euler Multispan Beams

9.1	Two-span uniform beams	261
9.2	Non-uniform beams	268
9.3	Three-span uniform symmetric beams	283
9.4	Uniform multispan beams with equal spans	287
9.5	Frequency equations in terms of Zol'tsberg functions	288
9.6	Beams with lumped masses	292
9.7	Slope and deflection method	295
	References	297

Chapter 10. Prismatic Beams Under Compressive and Tensile Axial Loads

10.1	Beams under compressive load	300
10.2	Simply supported beam with constraints at an intermediate point	307
10.3	Beams on elastic supports at the ends	309
10.4	Beams under tensile load	312
10.5	Vertical cantilever beams. The effect of self-weight	321
10.6	Gauge factor	321
	References	324

Chapter 11. Bress-Timoshenko Uniform Prismatic Beams

11.1	Fundamental relationships	328
11.2	Analytical solution	331
11.3	Solutions for the simplest cases	338
11.4	Beams with a lumped mass at the midspan	343
11.5	Cantilever Timoshenko beam of uniform cross-section with tip mass at the free end	345
11.6	Uniform spinning Bress-Timoshenko beams	345
	References	350

Chapter 12. Non-Uniform One-Span Beams

12.1	Cantilever beams	353
12.2	Stepped beams	368
12.3	Elastically restrained beams	374
12.4	Tapered simply supported beams on an elastic foundation	387
12.5	Free-free symmetric parabolic beam	388
	References	391

Chapter 13. Optimal Designed Beams

13.1	<i>Statement of a problem</i>	396
13.2	Common properties of $\omega \rightarrow V$ and $V \rightarrow \omega$ problems	398
13.3	Analytical solution $\omega \rightarrow V$ and $V \rightarrow \omega$ problems	399
13.4	Numerical results	401
	References	407

Chapter 14. Nonlinear Transverse Vibrations

14.1	One-span prismatic beams with different types of nonlinearity	410
14.2	Beams in magnetic field	420
14.3	Beams on an elastic foundation	422
14.4	Pinned-pinned beam under moving liquid	426
14.5	Pipeline under moving load and internal pressure	430
14.6	Horizontal pipeline under a moving liquid and internal pressure	431
	References	433

Chapter 15. Arches

15.1	Fundamental relationships	436
15.2	Elastic clamped uniform circular arches	441
15.3	Two-hinged uniform arches	445
15.4	Hingeless uniform arches	449

15.5 Cantilevered uniform circular arch with a tip mass	452
15.6 Cantilevered non-circular arches with a tip mass	453
15.7 Arches of discontinuously varying cross-section	458
References	469

Chapter 16. Frames

16.1 Symmetric portal frame	471
16.2 Symmetrical T-frames	481
16.3 Symmetrical frames	482
16.4 Viaduct frame with clamped supports	486
16.5 Non-regular frame	488
References	490

Appendices

A Eigenfunctions and their derivatives for one-span beams with different boundary conditions	493
B Eigenfunctions and their derivatives for multispan beams with equal length and different boundary conditions	507
C Some useful definite integrals	523
D Some assumed functions	527

Index	529
