

A REAL-TIME APPROACH TO PROCESS CONTROL

WILLIAM Y. SVRCEK

BRENT R. YOUNG

CONTENTS

About the Authors	xi
Foreword	xiii
Preface	xv
Acknowledgements	xvii
1 A BRIEF HISTORY OF CONTROL AND SIMULATION	1
1.1 Control	1
1.2 Simulation	3
1.3 References	11
2 PROCESS CONTROL HARDWARE FUNDAMENTALS	13
2.1 Control system components	13
2.2 Primary elements	14
2.2.1 Pressure measurement	15
2.2.2 Level measurement	20
2.2.3 Temperature measurement	20
2.2.4 Flow measurement	25
2.3 Final control elements	29
2.3.1 Control valves	29
2.4 References	49
3 FUNDAMENTALS OF SINGLE INPUT/SINGLE OUTPUT SYSTEMS	51
3.1 Open loop control	51
3.2 Disturbances	53
3.3 Feedback control – overview	53
3.4 Feedback control – a closer look	56
3.4.1 Positive and negative feedback	56
3.4.2 Control elements	56
3.4.3 Sensor/transmitter	59
3.4.4 Processes	59
3.4.5 Final control element	61
3.4.6 Controller	62
3.5 Process attributes – capacitance and dead time	63
3.5.1 Capacitance	63
3.5.2 Dead time	69

3.6	Process dynamic response	73
3.7	Process modelling and simulation	74
3.7.1	First order systems	75
3.7.2	Second order and higher order systems	75
3.7.3	Simple system analysis	83
3.8	References	91
4	BASIC CONTROL MODES	93
4.1	On-off control	93
4.2	Proportional (P-only) control	95
4.3	Integral (I-only) control	102
4.4	Proportional plus integral (PI) control	105
4.5	Derivative action	107
4.6	Proportional plus derivative (PD) controller	108
4.7	Proportional integral derivative (PID) control	112
4.8	Choosing the correct controller	112
4.9	Controller hardware	114
4.10	References	117
5	TUNING FEEDBACK CONTROLLERS	119
5.1	Quality of control and optimisation	119
5.1.1	Controller response	120
5.1.2	Error performance criteria	122
5.2	Tuning methods	124
5.2.1	"Trial and error" method	125
5.2.2	Process reaction curve methods	126
5.2.3	Constant cycling methods	129
5.3	References	133
6	ADVANCED TOPICS IN CLASSICAL AUTOMATIC CONTROL	135
6.1	Cascade control	135
6.1.1	Starting up a cascade system	139
6.2	Feedforward control	139
6.3	Ratio control	143
6.4	Override control (auto selectors)	144
6.4.1	Protection of equipment	146
6.4.2	Auctioneering	147
6.4.3	Redundant instrumentation	148
6.4.4	Artificial measurements	149
6.5	References	151

7	COMMON CONTROL LOOPS	153
7.1	Flow loops	153
7.2	Liquid pressure loops	155
7.3	Liquid level control	157
7.3.1	Proportional only control for integrating processes	166
7.3.2	PI controller tuning for integrating process	167
7.4	Gas pressure loops	168
7.5	Temperature control loops	169
7.5.1	The endothermic reactor temperature control loop	172
7.5.2	The exothermic reactor temperature control loop	175
7.6	Compressor control	177
7.6.1	Reciprocating compressor control	177
7.6.2	Centrifugal compressor control	178
7.7	References	184
8	DISTILLATION COLUMN CONTROL	185
8.1	Basic terms	185
8.2	Steady state and dynamic degrees of freedom	186
8.3	Control system objectives and design considerations	188
8.4	Methodology for the selection of a controller structure	191
8.5	Level, pressure, temperature and composition control	193
8.5.1	Level control	193
8.5.2	Pressure control	194
8.5.3	Temperature control	198
8.5.4	Composition control	200
8.6	Optimising control	200
8.6.1	Example: benzene column with a rectifying section sidestream	201
8.7	Distillation control scheme design using steady-state models	205
8.8	References	208
9	SELECTION OF MULTIPLE SINGLE-LOOP CONTROL SCHEMES USING STEADY STATE METHODS	209
9.1	Variable pairing	209
9.1.1	Quantifying control loop interactions	211
9.2	Relative gain array (RGA)	212
9.2.1	Properties of the RGA	213
9.2.2	Calculating the RGA	214
9.3	Loop pairing using the RGA	215
9.3.1	Niederlinski Index	217
9.4	Controller tuning for multiloop systems	218
9.5	RGA example: conventional distillation column	219

9.5.1	Base case steady-state solution	220
9.5.2	RGA calculation	222
9.6	References	225
10	PLANT-WIDE MODELLING AND CONTROL	227
10.1	Short term versus long term control focus	227
10.2	Cascaded units	229
10.3	Recycle streams	231
10.4	General considerations for plant-wide control	236
10.5	References	237
APPENDIX 1:	PROCESS AND INSTRUMENTATION DIAGRAM SYMBOLS	239
APPENDIX 2:	GLOSSARY OF TERMS	243
WORKSHOPS		249
Workshop 1 –	Learning through doing	251
Workshop 2 –	Feedback control loop concepts	254
Workshop 3 –	Process capacity and dead time	259
Workshop 4 –	Feedback control	267
Workshop 5 –	Controller tuning for capacity and dead time processes	275
Workshop 6 –	Advanced topics in classical control	280
Workshop 7 –	Distillation control	289
Workshop 8 –	Plant operability and controllability	297
