

Interactive Web Graphics with SHOUT 3D™

The Official
Guide to
Shout3D

Rob Polevoi

**Includes
16-Page
Color Insert**

Your Guide to
Bringing 3D
Images Seamlessly
to the Web

Perfect for Web
Developers, Java
Programmers,
and 3D Animators

 CD Contains
All the Tools
You Need to Create
3D Content on
the Web

Contents

<i>Introduction</i>	<i>xiii</i>
Chapter 1 • What Is Shout3D?	1
Shout3D, This Book, and You	3
What Is Shout3D?—A Longer Answer	4
Shout3D Is Realtime Interactive 3D Graphics	5
Shout3D Is Java Technology	6
Shout3D Is Founded on VRML	9
Shout3D Is Cheap	11
Shout3D Is Important	12
Chapter 2 • Your Shout3D Installation	15
View from the Top	16
The Runtime Directory	17
Applets and Other Java Classes	18
Model Files and Resources	19
Other Codebase Directories	21
The Demos	21
Publishing on the Web	21
Preparing Files for the Server	21
Using the Shout3DWizard	24
Publishing with the Wizard	30
Chapter 3 • Understanding 3D Scenes in VRML	35
Objects in 3D Space	37
The Simplest Possible Scene	37
The Same Scene in VRML	39
Changing Position	42
Rotation	43
Scaling	45
Within the Individual Object	47
Understanding the Geometry	47
Understanding Appearance	53

Object Hierarchies and the Scene Graph	55
Parenting Transforms	55
Relative Translations	58
Rotations and Pure Transforms	60
Paths and the Scene Graph	65
Chapter 4 • Exporting Shout3D Content from 3D Studio MAX	67
Basic Export Issues	68
Pivot Points and Local Space	69
Rotations	74
Scaling and Mirroring	79
Materials and Textures	84
From VRML to Shout3D	84
Using the MAX Material Editor	89
Chapter 5 • More MAX Export Issues	101
Environmental Mapping	102
EnvironmentMap Basics	103
Spherical Environment Maps	103
Cubic Environment Maps	105
Exporting Keyframe Animation	109
Animating Transforms	109
Morphing	114
Chapter 6 • Java Basics for Shout3D	119
Writing and Compiling Java	121
Different Versions of Java	122
Installing the JDK	123
Java Primer	124
The Concept of Extension	125
Fields and Methods	126
Data Types	127
Interfaces and Abstract Classes	136
Chapter 7 • Getting Started with Shout3D Applets and Panels	141
Elements of a Shout3D Project	142
The HTML File	143
The Applet Class File	145
The Panel Class File	147

Testing Things Out	157
Testing Initialization	159
Testing the Render Loop	164
Testing Mouse Input	169
Chapter 8 • Interactively Moving and Rotating Objects	183
Interactive Translation	184
Dragging in One Dimension	186
Adding the Second Dimension	192
Adding the Third Dimension	195
Interactive Rotation	199
Using Quaternions	199
Preparing the Model	201
The RotatePanel Class	202
Playing with the RotatePanel	206
Adding the Third Axis	207
Interactive Navigation	210
Rotating a Vector	210
The RotateMovePanel Class	212
Navigating the Viewpoint	215
Using Transforms	216
Working with the Viewpoint Node	216
Zooming the Camera	220
Customizing the Viewpoint	224
Losing the Jitters	229
Chapter 9 • Animation Issues	235
Understanding Realtime Animation	237
Procedural Animation	237
Basic Translation	238
A Change of Direction	241
Swing It!	243
Bounce It!	248
Interactive Control	251
Keyframed Animation	254
Controlling the TimeSensor	257
Swapping Animations	262

Chapter 10 • A Project with Custom Nodes	275
Building the Custom Node	276
The Concept of a TargetViewpoint	276
Coding the Custom Node	278
Testing the Node	286
Improving the TargetViewpoint	294
Adding a Center Field	295
Testing It Out	298
A Multiple Viewpoint Application	303
Adding Viewpoints on the Fly	303
Improving the Zoom	311
Adding a Counter Label	312
Creating a Graphical User Interface	320
Chapter 11 • A Simple Game	333
Designing the Game	334
Games on the Java Virtual Machine	334
Scan the Skies Overview	335
Building the Scene File	338
Coding the Java	356
The ScanTheSkiesDisplay Node	356
Building the Panel Class	360
Adjusting Panel Dimensions	375
Resizing with JavaScript	375
Flexible Resizing	378
Some Final Words	380
Index	381
