Preface	XI
Introduction: Cheese and Humans	1

PART 1

GENERAL MECHANISMS OF THE CONVERSION OF MILK INTO CHEESE

Chapter 1

THE CASEIN MICELLE AND MILK COAGULATION	7
--	----------

G. BRULÉ, J. LENOIR, F. REMEUF

1. The bovine casein micelle.....	8
1.1. Composition and characteristics	8
1.2. Component characteristics.....	9
1.3. Micelle structure	18
1.4. The dynamic character of the micelle.....	22
1.5. Stability of the micelle	23

2. Coagulation mechanisms	23
2.1. Coagulation by acidification	24
2.2. Coagulation through enzyme action	26
3. Comparison of the physicochemical characteristics of the bovine, caprine and ovine caseins	33
3.1. Casein composition: polymorphism	34
3.2. Micelles characteristics	36
3.3. Coagulation mechanisms	36
References.....	38

Chapter 2

THE DRAINAGE OF COAGULUM	41
---------------------------------------	-----------

J.F. RAMET

1. Definitions and aim.....	41
2. Drainage mechanisms	42
2.1. Coagulum obtained through enzyme action	42
2.2. Coagulum obtained through acidification.....	43
2.3. Mixed coagulum	46
2.4. Aqueous phase	46
3. Theoretical study of drainage	47
3.1. Drainage under whey	47
3.2. Mould drainage	47
4. Drainage factors.....	48
4.1. Direct factors.....	48
4.2. Indirect factors	54
4.3. Milk-linked factors.....	57
5. Conclusion	58
References.....	59

Chapter 3

WATER ACTIVITY AND CHEESE SALTING	60
--	-----------

J. HARDY

1. Bound water.....	61
1.1. Definitions and measure	61
1.2. Water structure in foods	62
1.3. Water bound to the milk constituents.....	65
1.4. Parameters influencing the bound water content of cheese	65
2. Cheese water activity	70
2.1. Definition and measure	70

2.2. Effects of water activity in foods	71
2.3. Water activity modifications in cheese	73
3. Cheese salting	75
3.1. Cheeses salt content – Roles of salting	75
3.2. Salt diffusion mechanisms and absorption kinetics	75
3.3. Water loss due to salting	77
3.4. Salt migration and equilibration during ripening	77
3.5. Cheesemaking brines	78
References.....	80

Chapter 4

THE BIOCHEMISTRY OF RIPENING.....	82
--	-----------

C. CHOISY, M. DESMAZEAUD, J.C. GRIPON, G. LAMBERET, J. LENOIR

1. Ripening, a complex biochemical process.....	82
2. The substrate	83
3. Ripening agents	86
3.1. Natural enzymes of milk.....	86
3.2. Coagulating enzymes.....	90
3.3. Microbial enzymes.....	95
4. Ripening factors.....	105
4.1. Atmosphere ventilation and composition	105
4.2. Water activity	106
4.3. Temperature	110
4.4. pH.....	112
5. Evolution of the constituents	114
5.1. Lactose fermentation and citric acid and lactate transformations.....	114
5.2. Triglyceride hydrolysis and fatty acid transformations	118
5.3. Protein degradation and amino-acid transformation.....	124
6. The effect of ripening on the characteristics of cheese.....	133
7. Prospects in technology development, acceleration of ripening.....	140
7.1. Addition of exogenous enzymes.....	140
7.2. Addition of attenuated starter.....	141
7.3. Potentials of genetic engineering	142
References.....	143

PART 2

PREPARATION OF THE CURD

Chapter 5

MILK TRANSFORMING AGENTS..... 155

J.P. RAMET

1. Rennet and coagulating enzymes.....	155
1.1. Rennet.....	156
1.2. Other coagulating enzymes.....	157
1.3. Characterisation of the composition and activity of the coagulating preparations.....	161
1.4. Specifications and regulations of enzymatic preparations used in cheesemaking.....	162
1.5. Conclusion	162
References.....	163

G. CANTERI

2. Lactic starters.....	164
2.1. Definition and general characteristics.....	164
2.2. Classification of lactic acid bacteria	165
2.3. Different types of starters.....	165
2.4. Different forms of inoculation	170
2.5. Strain choice criteria	173
2.6. The production of lactic starters in the cheesemaking industry.....	178
References.....	182

M.C. CHOPIN

3. Bacteriophages.....	183
3.1. Principal properties of the phages.....	183
3.2. The origin of phages in factories	185
3.3. Means of protection against phage action.....	185
3.4. Conclusion	187
References.....	188

Chapter 6

CHEESEMAKING MILK..... 189

J. RICHARD, M. DESMAZEAUD

1. The microbial flora of raw milk intended for cheesemaking.....	189
1.1. Main microbial groups of importance in cheesemaking.....	189
1.2. Origin of the micro-organisms of raw milks.....	190

1.3. Growth of micro-organisms in raw milk.....	191
1.4. Psychrotrophic bacteria enzymes and their role in cheesemaking.....	195
References.....	197

M. DESMAZEAUD

2. Suitability of the milk for the development of the lactic acid flora.....	199
2.1. Effects of the physical properties of milk.....	200
2.2. Use of lactose as a source of energy.....	200
2.3. Importance of non-protein nitrogen (NPN) products of milk.....	203
2.4. Use of the milk proteins.....	204
2.5. Importance of vitamins in milk.....	206
2.6. Factors unfavourable for the growth of the lactic acid bacteria.....	206
2.7. Influence of the heat-treatment of milk.....	211
References.....	212

J. LENOIR, F. REMUEF, N. SCHNEID

3. Rennetability of milk.....	213
3.1. Factors affecting coagulation of milk.....	213
3.2. Coagulation factors intrinsic to the milk.....	214
3.3. Global behaviour of milk towards rennet.....	222
3.4. Influence of preliminary processing treatments.....	223
3.5. Behaviour of goat and ewe milks.....	234
References.....	236
4. The preparation of milk.....	239

J. HERMIER, O. CERF

4.1. Heat treatments.....	239
---------------------------	-----

J.-L. MAUBOIS, J. LENOIR, F. REMUEF, N. SCHNEID

4.2. Physicochemical preparation of milks.....	254
References.....	274

J. FRANKINET

5. Using raw milk.....	277
------------------------	-----

J. LENOIR, F. REMUEF, N. SCHNEID

6. The use of powdered milk.....	280
6.1. Powder production methods.....	280
6.2. The effect of processing treatments on milk components.....	281
6.3. Effects of the storage of powders.....	283
6.4. Reconstitution of milk from powder.....	284
6.5. Physicochemical properties of reconstituted milks.....	285
6.6. Cheesemaking abilities of reconstituted milks.....	286
6.7. Using reconstituted milk in cheesemaking.....	289
References.....	296

J.L. MAUBOIS

7. Preparation and use of the ultrafiltration retentates.....	
Use of the MMV process	297
7.1. The MMV process (Maubois-Mocquot-Vassal)	297
7.2. Use of ultrafiltration retentates	298
References.....	301

Chapter 7

PHYSICAL PROPERTIES OF THE COAGULUM	302
--	------------

J.P. RAMET, J. SCHER

1. Description of the physical phenomena of coagulation.....	302
1.1. Coagulation	302
1.2. Techniques for measuring milk coagulation and physical properties of the coagulum.....	303
1.3. Mathematical approach of the process of gel formation and firming	307
2. Describing the physical phenomena of draining.....	308
2.1. Draining	308
2.2. Kinetics of whey expulsion.....	309
References.....	311

Chapter 8

COMPARISONS IN THE PROCESSING OF DIFFERENT TYPES OF CURD .	312
---	------------

J.P. RAMET

1. Introduction.....	312
2. General principles of cheesemaking technology	316
2.1. Coagulation control.....	316
3. Technologies of cheese varieties.....	324
3.1. Fresh cheeses	324
3.2. Cheeses intermediary between fresh and soft cheeses.....	327
3.3. Soft cheeses.....	328
3.4. Pressed cheeses	330
3.5. Hard cheeses	332
3.6. Blue veined cheeses	332
3.7. Pasta filata cheeses.....	333
3.8. Whey cheeses.....	333
3.9. Salted cheeses preserved in brine	334
4. Conclusion	335

Annexes	336
Diagram 1: The manufacture of fresh cheese	336
Diagram 2: The manufacture of soft cheese	337
Diagram 3: The manufacture of uncooked pressed cheese.....	338
Diagram 4: The manufacture of cooked pressed cheese.....	339
References.....	340

Chapter 9

CURD CARRY OVER	341
------------------------------	-----

J.C. LE JAUEN

1. Benefits of curd transfer in comparison with the other processes	341
2. Description of the technology used	343
2.1. Manufacturing and packing curd	343
2.2. Freezing, storing and re-using.....	344
3. Incidence of the freezing of curd on the quality of the cheeses.....	345
3.1. Texture defects and water content of the cheese.....	345
3.2. Development of the microbial flora	346
3.3. Oxidation and total free fatty acids content	346
3.4. Proteolytic activity of the curd enzymes and composition	348
3.5. Lack of characteristic flavour	348
References.....	349

PART 3

CHEESE RIPENING

Chapter 10

MICROBIAL PHENOMENA	353
----------------------------------	-----

C. CHOISY, M. DESMAZEAUD, M. GUEGUEN, J. LENOIR, J.L. SCHMIDT, C. TOURNEUR

1. Useful micro-organisms.....	354
1.1. Bacterial flora.....	354
1.2. The yeast flora.....	375
1.3. Fungal flora, <i>Penicillium</i>	387
2. Association phenomena	396
2.1. Complexity of the cheese microbial flora.....	396
2.2. Multiplication of micro-organisms and growth factors	396
2.3. Microbial interactions. Definitions	397
2.4. Antagonistic phenomena.....	397
2.5. Stimulation phenomena	400

3. Ecology of the flora of certain types of cheese.....	402
3.1. Surface mould soft cheese, Camembert.....	402
3.2. Washed rind soft cheese, Pont-l'Évêque.....	404
3.3. Blue veined cheeses: Roquefort.....	404
3.4. Pressed cheeses. Cheddar and Saint-Paulin.....	406
3.5. Cooked pressed cheese: Emmental and Comté.....	407
3.6. The Comté smear.....	408
References.....	411

Chapter 11

COMPARING RIPENING TECHNOLOGY OF THE VARIOUS TYPES OF CHEESE.....	418
--	------------

J.P. RAMET

1. Generalities.....	418
1.1. Introduction.....	418
1.2. Creating an enzyme potential for ripening.....	419
1.3. Development and differentiation of the cheeses.....	423
1.4. External factors.....	429
1.5. Conclusion.....	435
References.....	436

V. MANDRON, M. GUIARD

2. Case study: film-packed ripening.....	437
2.1. Field of application.....	437
2.2. Categories of cheese compatible with film-packed ripening.....	437
2.3. General principles of use.....	438
2.4. Suitability of packing material to the requirements of film-packed ripening.....	439
2.5. Process use.....	441
2.6. Conclusion.....	442
Annexes.....	444
Annex 1: Substrate: polyamide, polyester, polypropylene.....	444
Annex 2: Welding.....	445
Annex 3: Barrier to oxygen.....	446

Chapter 12

PHYSICAL AND SENSORY PROPERTIES OF CHEESE.....	447
---	------------

J. HARDY, J. SCHER

1. Physical properties of cheese.....	447
1.1. Rheological and textural properties of cheeses.....	448

1.2. Aspect and colour of cheeses	453
1.3. Thermophysical properties of cheeses	457
References.....	459

H.E. SPINNLER, E. GUICHARD, J.C. GRIPON

2. Cheese flavour	461
2.1. Introduction.....	461
2.2. Fresh cheeses and unripened cheeses	461
2.3. Hard cheeses	462
2.4. Swiss-type cheeses.....	463
2.5. Blue cheeses and mould-ripened soft cheeses	464
2.6. Bacterial surface-ripened soft cheeses	467
2.7. Off-flavours in cheeses	468
2.8. Conclusion	471
References.....	472

PART 4

CHEESE DEFECTS

Chapter 13

CHEESE MANUFACTURING ACCIDENTS AND CHEESE DEFECTS	477
--	------------

J.L. BERGÈRE, J. LENOIR

1. Curdling and draining defects.....	478
1.1. Rennet coagulation defects	478
1.2. Defects in lactic acidification.....	484
2. Ripening defects	484
2.1. Opening and texture defects.....	484
2.2. Rind making and appearance defects.....	492
2.3. Flavour and aroma defects	496
References.....	506

PART 5

THE PACKAGING AND STORAGE OF CHEESES

Chapter 14

GENERAL PRINCIPLES	511
---------------------------------	------------

A. ECK

Chapter 15

PACKAGING AND WRAPPING MATERIALS 513

S. DESOBRY, J. HARDY

1. Container-content interactions.....	513
1.1. Gas permeability of packaging.....	514
1.2. Water vapour permeability (WVP).....	516
1.3. Migration and toxicity.....	520
1.4. Light.....	521
1.5. Microbiological aspects.....	522
1.6. Conclusion.....	523
References.....	524

J.-C. GILLIS

2. The particular case of "fresh-packed".....	525
2.1. Definition of "fresh-packed".....	525
2.2. History and development.....	526
References.....	528

Chapter 16

PRE-PACKAGING OF RIPENED CHEESES..... 529

F. COLSON

1. Cheese preparation.....	530
1.1. Cleaning.....	530
1.2. Cutting.....	530
2. Pre-packaging techniques.....	531
2.1. By flexible film folding.....	531
2.2. By flexible film sealing (several techniques are used).....	531
2.3. Thermoforming and addition of protecting cover.....	533
2.4. Skin pack.....	533
3. Pre-packaging materials.....	533
3.1. Folding equipment.....	534
3.2. Shaping equipment: Form Fill Seal – FFS.....	534
3.3. Thermoforming equipment.....	535
3.4. "Skin Pack" equipment.....	538
4. Packaging materials.....	538
4.1. Flexible film.....	538
4.2. Rigid support and thermoforming materials.....	540
4.3. Protective cover material for thermoforming casings.....	540
5. Functionality.....	540
6. Regulatory constraints and labelling.....	541

PART 6

MAIN MANUFACTURING EQUIPMENT

Chapter 17

CHEESEMAKING EQUIPMENT	545
-------------------------------------	------------

J.-M. TABARD

1. Fresh cheeses	545
1.1. Mechanised process, draining by centrifuge curd separation	545
1.2. Separation of whey from curd by ultrafiltration	548
1.3. Manufacture of fresh cheeses using non-mechanised processes	548
2. Soft and blue cheeses	550
2.1. Mechanisation of craft industry techniques	551
2.2. Mechanisation of industrial techniques	552
2.3. Ultrafiltration techniques	556
2.4. Salting mechanisation	557
3. Semi-hard cheeses	558
3.1. Cheesemaking vats	558
3.2. Draining-prepressing-moulding system	559
3.3. Pressing system	561
3.4. Cheese moulds	562
3.5. Washing of moulds	562
3.6. Brining	562
4. Hard cheeses	563
4.1. Cheesemaking vats	563
4.2. Draining, moulding	563
4.3. Pressing	565
4.4. Brining	565
4.5. Ripening	566
5. Cheddar and Cantal	566
5.1. Tebel-MKT Alfomatic line	566
5.2. APV - Baker cheddarmaster lines	566
5.3. Cantal manufacturing lines	567
6. Pasta filata curd cheeses	568

Chapter 18

THE DESIGN, SET UP AND USE OF PREMISES	569
---	------------

M. PARMENTIER

1. Contribution of environmental factors to a better hygiene in manufacturing and ripening at cheesemaking plants	569
1.1. Introduction	569

1.2. Critical points in the environment.....	571
1.3. Critical points: order of importance.....	573
1.4. Technical solutions.....	576
1.5. Air filtration in cheesemaking	582
1.6. Conclusion	584
References.....	586

P. GUYADER, A. AMGAR

2. Definition and use of the French "ultra-cleanliness"	587
2.1. Process plant design.....	587
2.2. Ventilation	591
2.3. Conclusion	594
References.....	595

Annexes	596
Annex 1: Bio-contamination.....	596
Annex 2: Hygienic design of the premises depending on the type of contamination	597

Chapter 19

GENERAL OPERATIONS.....	598
-------------------------	-----

M. COMMEAU

1. Cleaning and disinfecting	598
1.1. Water	599
1.2. Cleaning and disinfecting products.....	599
1.3. Cleaning method	600
1.4. Disinfecting.....	607
1.5. General problems linked to cleaning and disinfecting.....	610

J.-C. GILLIS

2. Transfers in cheesemaking.....	617
2.1. Constraints imposed by the product and its technology	617
2.2. Constraints imposed by equipment.....	620
2.3. Main handling operations	621
2.4. Technical solutions.....	622
2.5. Conclusion	625

G. CORRIEU, D. PICQUE

3. Operation programming and automation.....	626
3.1. Introduction.....	626
3.2. Sequential operations programming	627
3.3. Characterisation and standardisation of products used	627
3.4. Automating fresh cheese production	629
3.5. Automation of ripened cheeses production.....	632

3.6. Conclusions – Towards a complete control over cheesemaking manufacture.....	636
References.....	637

PART 7

PROCESSED CHEESE

Chapter 20

PROCESSED CHEESE	641
M. CHAMBRE, J. DAURELLES	
1. Introduction.....	641
1.1. Definition	641
1.2. History and market.....	641
1.3. Current presentation of the product	643
2. Technology: raw materials.....	643
2.1. Dairy raw materials.....	643
2.2. Other raw materials.....	644
2.3. Raw material selection and recipes.....	645
3. Processing technology additives.....	645
3.1. Emulsifying salts or metting salts.....	645
3.2. Properties of melting salts.....	647
3.3. Other melting salts and tests to replace the melting salts	648
3.4. Other technological agents.....	648
4. Processing technology	649
4.1. Raw material selecting and quality control.....	649
4.2. Rind removal, cutting and milling of cheeses.....	649
4.3. Preparation of components	649
4.4. Processing itself	649
4.5. Homogenising.....	651
4.6. Packaging.....	651
4.7. Cooling of the processed cheese	652
4.8. Product storage.....	652
5. More precise scientific concepts.....	652
5.1. General principles	652
5.2. Schematic representation of the phenomena occurring during processing ...	654
5.3. Important factors favouring processing	655
6. Nutritional value	656
7. In conclusion.....	656
References.....	657

PART 8

CHEESE: THE PRODUCT

Chapter 21

A. ECK

WHAT IS CHEESE?	661
-----------------------	-----

Chapter 22

CHEESE IN DIET	663
----------------------	-----

J.C. DILLON, A.M. BERTHIER

1. Nutritional characteristics of cheese	663
1.1. Composition	663
1.2. Nutritional value	666
1.3. Quantity recommended depending on age	668
1.4. Place of cheese in today's diet	669
1.5. Nutritional problems	671
1.6. Conclusion	672
References	673

L. GUÉGUEN

2. Mineral value of cheeses	674
2.1. Mineral composition of cheeses	674
2.2. Health value of cheese calcium	678
References	683

C. THOUVENOT

3. Cheese consumption from a socio-cultural angle	684
3.1. Old significance	684
3.2. Current significance	685
3.3. Uses in Europe	686
References	688

Chapter 23

HYGIENE ASPECTS	688
-----------------------	-----

V. LETONDEUR-LAFARGE, C. LAHELLEC

1. Pathogenic bacteria	689
1.1. <i>Listeria monocytogenes</i>	689
1.2. <i>Staphylococcus aureus</i>	691
1.3. <i>Salmonella</i>	692

1.4. <i>Yersinia enterocolitica</i>	694
1.5. <i>Escherichia coli</i>	695
1.6. <i>Campylobacter jejuni</i>	696
1.7. <i>Brucella</i>	697
1.8. <i>Bacillus cereus</i>	698
1.9. <i>Mycobacterium tuberculosis</i> and <i>Mycobacterium bovis</i>	699
1.10. <i>Coxiella burnetti</i>	699
1.11. <i>Clostridium botulinum</i>	700
1.12. Toxin producing moulds.....	701
1.13. Viruses.....	702
References.....	703
J.-L. EVETTE	
2. Using irradiation treatment to destroy bacteria.....	705
V. STAHL, B. HÉZARD, F. KUNTZ, A. STRASSER	
3. Use of a surface irradiation treatment to destroy pathogenic bacteria such as <i>Listeria monocytogenes</i> from a soft and red smear cheese.....	707
3.1. Food irradiation.....	707
3.2. Regulation.....	707
3.3. Technology of irradiation treatments and monitoring of treatment quality...	708
3.4. Examples of validation.....	709
3.5. Conclusion.....	714
3.6. Note from the editors.....	715
References.....	716
G. SCHNITZER, F. JANIN	
4. Chemical contaminants.....	717
4.1. Metals and dairy products.....	717
References.....	720
4.2. Residues from pesticides and pollutants of an industrial origin.....	721
References.....	727
4.3. Mycotoxins.....	728
References.....	731
4.4. Artificial radionuclides.....	732
References.....	737

Chapter 24

CHEESE YIELD. EVALUATION AND MEASUREMENT 738

J. VANDEWEGHE

1. Definition of the cheesemaking yield	738
2. Measuring the yield	738
2.1. From the quantity of milk and cheese	738
2.2. The quantity of fat free dry matter part of milk recovered in the cheese: G coefficient	739
2.3. From the analytical knowledge of the dry matter content of milk, cheese and whey obtained	739
3. Evaluating the yield	740
3.1. Using statistical analysis of analytical data from a large number of productions	740
3.2. Using the target composition of cheese	741
3.3. Generalisation or sponge theory	741
3.4. Cheeses obtained from concentrated milk (evaporation and addition of powdered milk)	742
3.5. Cheeses obtained by milk ultrafiltration (MMV process)	743
4. Yields comparison	744
4.1. Correction according to the dry matter content of cheeses	744
4.2. Yields comparison: statistical validation	745
References	747

Chapter 25

SENSORY ANALYSIS OF CHEESE (scientific aspect) 748

S. ISSANCHOU

1. Setting up a trained panel	749
1.1. Panel recruitment	749
1.2. Panel selection	749
1.3. Size of the panel	750
2. Various methods used in sensory analysis	751
2.1. Difference tests	751
2.2. Ranking tests	753
2.3. Descriptive methods	754
3. Monitoring individual and panel performances	761
4. Conditions of evaluations	761
4.1. Product preparation	761
4.2. Rinsing	761
5. Conformity evaluations	762

6. Hedonic measures	763
6.1. Pair test	763
6.2. Hedonic rating	763
6.3. Relative-to-ideal intensity ratings	764
6.4. Limits of hedonic measures	765
6.5. Other hedonic tests	765
6.6. Conditions of evaluation	766
7. Linking descriptions and hedonic measures	766
8. Conclusion	767
References	768

Chapter 26

CHEMICAL AND MICROBIOLOGICAL CONTROLS	771
--	------------

R. GRAPPIN, A. BRANGER

1. Introduction	771
2. General principle of analysis methods	772
2.1. Status of analytical methods	773
2.2. Analytical criteria	774
2.3. Interpretation of analytical results for monitoring	774
3. Measuring dry matter and fat content	776
3.1. Sampling	776
3.2. Reference methods	777
3.3. Routine methods	778
4. Microbiological analyses	779
4.1. Growth of contaminating microflora	779
4.2. Sampling	780
4.3. Testing for official criteria	780
4.4. Technological controls	782
5. Verifying quality of the analysis	784
5.1. Reference materials	784
