

Fmoc Solid Phase Peptide Synthesis

A PRACTICAL APPROACH

Edited by

W. C. CHAN and P. D. WHITE

The Practical Approach Series
Series Editor: B. D. Hames

Contents

<i>List of Contributors</i>	xvii
<i>Abbreviations</i>	xxi
1. Introduction—a retrospective viewpoint	1
<i>R. C. Sheppard</i>	
2. Basic principles	9
<i>Peter D. White and Weng C. Chan</i>	
1. The solid phase principle	9
2. Merrifield SPPS	11
3. Fmoc/tBu SPPS	11
Resins	13
Linkers	15
Side-chain protecting groups	26
First residue attachment	26
Coupling step	27
N-Fmoc deprotection reaction	27
Aggregation	30
Enantiomerization	31
Side reactions	32
Cleavage reaction	36
Limitations	36
<i>References</i>	37
3. Basic procedures	41
<i>Weng C. Chan and Peter D. White</i>	
1. Introduction	41
2. Manual synthesis	41
3. Resin handling	41
4. Resin functionalization	44
5. Attachment of the first residue	44
Hydroxymethyl-based resins	44
Trityl-based linkers	50
Aminomethyl-based linkers	51

Contents

6. Fmoc removal	51
7. Coupling methods	52
DIC/HOBt	53
Active esters	54
Symmetrical anhydride	55
Aminium/phosphonium activation methods	57
Acid fluorides	59
8. Assembly of the peptide chain	60
9. Analytical procedures	61
Resin tests	61
Bromophenol blue monitoring	62
Fmoc determination	62
HPLC analysis	63
10. TFA-mediated cleavage	64
Preparing the resin for cleavage	64
Cleavage reactions releasing fully deprotected peptides	65
Peptide isolation	70
Monitoring the cleavage reaction	72
Release of fully protected peptides from hyper-acid labile supports with 1% TFA	73
References	74
 4. Preparation and handling of peptides containing methionine and cysteine	 77
<i>Fernando Albericio, Ioana Annis, Miriam Royo, and George Barany</i>	
1. Introduction	77
2. Methionine	78
3. Cysteine	81
Cysteine protection	81
Solid phase synthesis of cysteine-containing peptides	87
Formation of disulphides	91
References	109
 5. Difficult peptides	 115
<i>Martin Quibell and Tony Johnson</i>	
1. Introduction	115
2. Difficult peptides—an overview	115
Background	115
Identifying the effects of aggregation	117
Effect of resins, solvents, and additives on aggregation	118

Contents

3. Predicting difficult peptide sequences	119
4. The <i>N</i>-(2-hydroxy-4-methoxybenzyl) (Hmb) backbone amide protecting group	122
Development and preparation of (Hmb)amino acid derivatives	122
Incorporation of <i>N</i> -(2-hydroxy-4-methoxybenzyl)amino acid residues	125
Site selection for Hmb backbone protection	127
Improved difficult peptide syntheses through Hmb backbone protection	128
Use of Hmb protection to increase solution solubility	131
References	132
 6. Synthesis of modified peptides	 137
<i>Sarah L. Mellor, Donald A. Wellings, Jean-Alain Fehrentz, Marielle Paris, Jean Martinez, Nicholas J. Ede, Andrew M. Bray, David J. Evans, and G. B. Bloomberg</i>	
1. C-terminal modifications	137
Peptidyl <i>N</i> -alkyl amides	137
Use of the 4-hydroxymethylbenzoic acid linkage agent for the synthesis of C-terminal modified peptides	141
Peptide hydroxamic acids	149
Peptide aldehydes by solid phase synthesis	153
Synthesis of C-terminal peptide aldehydes on the Multipin™ system using the oxazolidine linker	161
2. N-terminal modifications	166
Biotinylation	167
Reductive alkylation	168
3. Side-chain modifications	169
Introduction	169
Strategy design in the synthesis of atypical peptides	169
References	178
 7. Phosphopeptide synthesis	 183
<i>Peter D. White</i>	
1. Introduction	183
2. Building block approach	183
Introduction	183
Practical considerations	184
Illustrative examples	185
3. Global phosphorylation	187
Introduction	187

Contents

General protocol for post-synthetic phosphorylation	189
Illustrative examples	190
Thiophosphorylated peptides	191
4. Analysis of phosphopeptides	192
HPLC analysis	192
Mass spectroscopy	192
References	193
8. Glycopeptide synthesis	195
<i>Jan Kihlberg</i>	
1. Introduction	195
2. Strategic considerations in glycopeptide synthesis	197
3. Formation of glycosidic linkages to amino acids	198
4. Choosing protective groups for glycosylated amino acids	200
Protection of the α -amino group	200
Protection of the α -carboxyl group	201
Protection of the carbohydrate hydroxyl groups	201
Suitable linkers and resins	202
5. Preparation of glycosylated amino acids	203
6. Synthesis of a glycopeptide from HIV gp120	209
References	211
9. Convergent peptide synthesis	215
<i>Kleomenis Barlos and Dimitrios Gatos</i>	
1. Introduction	215
Strategy in convergent synthesis	215
2. Solid phase synthesis of protected peptide fragments	216
Fragment selection	216
Synthesis of protected peptide fragments	216
3. Solid phase fragment condensation	220
Esterification of the C-terminal fragment on 2-chlorotrityl chloride resin	220
Activation and condensation of protected peptide fragments	221
4. Phase and direction change	223
Fragment condensation in solution	223
Two-directional synthesis. Attachment of fragments on resins of the trityl-type through an amino acid side chain functional group	225

Contents

5. Deprotection, purification, and purity determination of the synthetic peptides	227
References	227
10. Methods of preparing peptide-carrier conjugates	229
<i>Jan W. Drijfhout and Peter Hoogerhout</i>	
1. Introduction	229
2. Homobifunctional cross-linking	229
3. Heterobifunctional cross-linking	231
Conjugation of thiol-containing peptides to proteins	231
Conjugation of peptides to thiolated carriers	234
4. MAP-core constructs as peptide-carriers	236
Sequential synthesis of MAPs	237
Synthesis of MAPs by fragment condensation	237
References	239
11. Chemoselective and orthogonal ligation techniques	243
<i>James P. Tam and Y.-A. Lu</i>	
1. Introduction	243
2. Chemoselective non-amide ligation	244
Thiol chemistry	245
Carbonyl chemistry	247
3. Orthogonal amide ligation	252
Carbonyl chemistry	252
Thiol chemistry	258
References	262
12. Purification of large peptides using chemoselective tags	265
<i>Paolo Mascagni</i>	
1. Introduction	265
2. Purification of large polypeptides using Fmoc-based chromatographic probes	266
The concept of selective and reversible labelling	266

Contents

3. Capping of unreacted polypeptide chains in SPPS	268
4. RP-HPLC using lipophilic chromatographic probes	269
5. Affinity chromatography using biotinylated chromatographic probes	274
References	276
 13. Instrumentation for automated solid phase peptide synthesis	 277
<i>Linda E. Cammish and Steven A. Kates</i>	
1. Introduction	277
2. Batchwise peptide synthesis	279
PE Biosystems Model 433A peptide synthesis system	280
Protein Technologies, Inc., SONATA/Pilot™ peptide synthesizer	283
Protein Technologies Inc., Model PS3™ peptide synthesizer	283
Advanced ChemTech Model 90 peptide synthesizer	284
Advanced ChemTech Model 400 production-scale synthesizer	286
ABIMED EPS 221 synthesizer	287
3. Continuous-flow peptide synthesis	287
PE Biosystems Pioneer™ peptide synthesis system	289
4. Multiple peptide synthesis systems	291
PE Biosystems Pioneer MPS option	291
Protein Technologies, Inc., SYMPHONY/Multiplex™ peptide synthesizer	292
Advanced ChemTech Models 348, 396, and 357 bimolecular synthesizers	293
ABIMED AMS 422 multiple peptide synthesizer	294
ABIMED ASP 222 Auto-Spot Robot	296
ZINSSER ANALYTIC SMPS 350 multiple peptide synthesizer	297
ZINSSER ANALYTIC SOPHAS solid phase synthesizer	298
SHIMADZU PSSM-8 peptide synthesizer	298
5. Conclusions	299
References	300
 14. Manual multiple synthesis methods	 303
<i>B. Dörner, J. M. Ostresh, R. A. Houghten, Ronald Frank, Andrea Tiepold, John E. Fox, Andrew M. Bray, Nicholas J. Ede, Ian W. James, and Geoffrey Wickham</i>	
1. Simultaneous multiple peptide synthesis—the T-bag method	303
Introduction	303
The T-bag method	303

Contents

2. Multiple peptide synthesis with the SPOT-technique	305
Introduction	305
Synthesis of peptide SPOT-arrays	308
Applications of peptide SPOT-arrays	313
3. Manual multipепptide synthesis in block arrays	314
Hardware	314
Chemistry	315
Software	317
4. Synthesis of peptides by the Multipin™ method	319
Introduction	319
Linkers	320
Peptide synthesis	321
References	325

Appendices	329
A1 Equipment and reagents for peptide synthesis	329
A2 List of suppliers	331
A3 Useful tables	337
