Contents

Preface	ix		
SECTION I PRINCIPLES AND PROCEDURES			
1. General considerations	1	4. Principles of sedation, analgesia and premedication	75
Introduction	1	Introduction	75
Pain	2	Sedation	76
Mechanisms of anaesthesia	6	Analgesia	91
Anaesthetic risk	15	Sedative-opioid combinations	101
Evaluation of the patient before anaesthesia	17	Anticholinergic agents	103
Significance of conditions found by preanaesthetic examination	19	Premedication	106
Preparation of the patient	22	Anticholinergic agents	103
Influence of pre-existing drug therapy	24	References	107
References	26	5. General pharmacology of the injectable agents used in anaesthesia	113
2. Patient monitoring and clinical measurement	29	Introduction	113
Introduction	29	The barbiturates	114
General considerations relating to monitoring	29	Rapidly acting non-barbiturates	119
Clinical assessment of the patient	31	Less rapidly acting intravenous agents	125
References	57	Dissociative agents	127
3. Introduction to general anaesthesia: pharmacodynamics and pharmacokinetics	61	References	129
Introduction	61	6. General pharmacology of the inhalation anaesthetics	133
Pharmacokinetics of inhaled anaesthetics	63	Introduction	133
Pharmacokinetics of intravenous anaesthetics	69	Individual inhalation anaesthetics	136
References	74	Occupational exposure to inhalation anaesthetic agents	144
		References	145
		7. Relaxation of the skeletal muscles	149
		Introduction	149
		Theory of neuromuscular transmission	150
		Neuromuscular block	153
		Monitoring of neuromuscular block	155
		Agents which produce non-depolarizing (competitive) block	161
		Agents which produce depolarizing block	165

Evoked recovery from neuromuscular block	169	Sedation of the standing horse	247
Use of neuromuscular blocking drugs in veterinary anaesthesia	171	Analgesia	254
Postoperative complications of neuromuscular blocking agents	174	Local analgesia	257
Centrally acting muscle relaxants	174	General anaesthesia	267
References	175	References	307
8. Pulmonary gas exchange: artificial ventilation of the lungs	179	12. Anaesthesia of cattle	315
Introduction	179	Introduction	315
Spontaneous respiration	179	Sedation	317
IPPV when the chest wall is intact	182	Local analgesia	320
IPPV after opening of the pleural cavity	184	Intravenous regional analgesia	331
Possible harmful effects of IPPV	186	General anaesthesia	331
Management of IPPV	187	References	338
References	195	13. Anaesthesia of sheep, goats and other herbivores	341
9. Apparatus for the administration of anaesthetics	197	Introduction	341
Administration of intravenous agents	197	Local analgesia	341
Administration of inhalation agents	202	Sedation	348
Breathing systems	208	General anaesthesia	349
Face masks and endotracheal tubes	218	Other herbivores	357
Cleaning and sterilization of anaesthetic equipment	222	References	365
References	223	14. Anaesthesia of the pig	367
10. General principles of local analgesia	225	Introduction	367
Introduction	225	Porcine malignant hyperthermia	368
Anatomy and function of the nerve fibre	225	Sedation	370
Clinically useful local analgesic drugs	227	General anaesthesia	371
Pharmacokinetics of local analgesic drugs	230	Neuromuscular blocking agents	380
Systemic and toxic effects of local analgesic drugs	231	Local analgesia	381
Forms of local analgesia	233	References	383
References	244	15. Anaesthesia of the dog	385
		Introduction	385
		Sedation and analgesia	385
		Preparation for anaesthesia	391
		Premedication	396
		Intravenous anaesthesia	398
		Inhalation anaesthesia	408
		Neuromuscular blocking agents	416
		Anaesthetic management	418
		Specific patient problems	423
		Local analgesia	430
		References	435
		16. Anaesthesia of the cat	441
		Introduction	441
		Analgesia	442
		Sedation	443

SECTION 2 ANAESTHESIA OF THE SPECIES

11. Anaesthesia of the horse	247
Introduction	247

General anaesthesia	445	Closure of the chest	493
References	461	Anaesthetic management for specific surgical procedures	496
17. Anaesthesia of birds, laboratory animals and wild animals	463	References	505
Introduction	463	20. Prevention and management of anaesthetic accidents and crises	507
Rodents and other small mammals	463	Introduction	507
Chelonia	470	Haemoglobin desaturation	507
Reptilia	470	Airway	509
Fish	471	Breathing	514
Birds	472	Circulatory failure	518
Bears	475	Hypothermia and hyperthermia	528
Non-human primates	475	Anaphylaxis and anaphylactoid reactions	529
Wild animals	477	Other causes of anaesthetic accident	529
References	478	Dangers to the anaesthetist	531
		References	532
SECTION 3 SPECIAL ANAESTHESIA			
18. Anaesthesia for obstetrics	481	APPENDICES	
Introduction	481	Appendix I Abbreviations	535
The state of pregnancy	481	Appendix II Occupational exposure standards	537
Pharmacology of drugs administered during pregnancy	482	Appendix III UK and US names of some drugs used in anaesthesia	539
Horses	484	Index	541
Cattle	486		
Sheep and goats	486		
Pigs	487		
Dogs	488		
Cats	490		
References	491		
19. Intrathoracic surgery	493		
Introduction	493
