Digital Signal Processing

White

Contents

| | |
|---|-----------|
| Preface | ix |
| Chapter 1. Introduction to Digital Signal Processing and Digital Filtering | 1 |
| 1.1 Introduction | 1 |
| 1.2 Historical Perspective | 1 |
| 1.3 Simple Examples of Digital Signal Processing | 2 |
| 1.4 The Common DSP Equation | 5 |
| 1.5 What the DSP Equation Shows | 6 |
| Chapter 2. Effect of Signal Sampling | 9 |
| 2.1 Periodic Sampling of a Cosine Signal | 9 |
| 2.2 Periodicity of Any DSP System Frequency Response | 11 |
| 2.3 Aliasing and Nyquist Limit | 15 |
| 2.4 Anti-aliasing Filters | 16 |
| 2.5 The Nyquist Limit and DSP Output Periodicity by Mathematical Means | 18 |
| Chapter 3. Digital Filter Specifications | 25 |
| 3.1 Introduction to Filter Gain, Loss, dB, and Graphical Filter Specifications | 25 |
| 3.2 The Lowpass Digital Filter Specification | 28 |
| 3.3 The Highpass Digital Filter Specification | 30 |
| 3.4 The Bandpass Digital Filter Specification | 31 |
| 3.5 The Bandstop Digital Filter Specification | 33 |
| 3.6 Alternate Graphical Specifications | 35 |

| | | | |
|----------------|------------|--|------------|
| Chapter | 4. | z-Transforms | 39 |
| | 4.1 | The Need for z-Transforms of the DSP Equation . . . | 39 |
| | 4.2 | The Definition of the z-Transform and Its Use | 40 |
| | 4.3 | Derivation of Necessary z-Transform Pairs | 43 |
| | 4.4 | Derivation of the Major z-Transform Property Using Algebra | 46 |
| Chapter | 5. | The z-Transform of the DSP Equation | 55 |
| | 5.1 | The Transformation of the Modified DSP Equation | 55 |
| | 5.2 | The Transfer Function of a Digital Filter | 59 |
| Chapter | 6. | Frequency Response of Digital Filters and DSP Systems | 67 |
| | 6.1 | The Euler Equation from Trigonometry | 67 |
| | 6.2 | Frequency Scaling | 69 |
| | 6.3 | Computing the DSP Frequency Response | 70 |
| Chapter | 7. | IIR Filter Design | 81 |
| | 7.1 | Review of Four Basic Analog Filter Approximations | 82 |
| | 7.2 | The Impulse Invariant IIR Filter | 84 |
| | 7.3 | The Step Invariant IIR Filter | 91 |
| | 7.4 | The Bilinear Transform (BLT) Filter | 94 |
| Chapter | 8. | Digital Filter and DSP Stability | 111 |
| | 8.1 | Introduction to Stability | 111 |
| | 8.2 | The Z-plane Unit Circle | 113 |
| | 8.3 | Other Properties Using the Z-plane | 120 |
| Chapter | 9. | Filter Coefficient Precision | 129 |
| | 9.1 | Introduction into Computer Numeric Precision . . | 129 |
| | 9.2 | Development of Equations for Precision Effects . . | 131 |
| | 9.3 | Computing DSP Coefficient Word Length Effects . | 139 |
| Chapter | 10. | FIR Filter Design | 145 |
| | 10.1 | Introduction to the FIR Filter | 146 |
| | 10.2 | The General FIR Coefficient Equation | 147 |
| | 10.3 | The Basic Solutions of the Coefficient Equation . . | 150 |
| | 10.4 | Use of the Basic Solutions | 154 |
| | 10.5 | The Causal (Real Time) and Noncausal Filter Coefficients | 156 |

| | | |
|----------------|--|------------|
| Chapter | 11. Windows for FIR Filters | 165 |
| | 11.1 The Gibbs Effect | 165 |
| | 11.2 Several Windows | 167 |
| | 11.3 Non-Windowing Approaches | 175 |
| Chapter | 12. Practical Digital Filter Considerations | 187 |
| | 12.1 FIR versus IIR Digital Filters | 188 |
| | 12.2 Effects of Analog to Digital Converter Number of Bits | 191 |
| | 12.3 Fixed Point Math versus Floating Point for a DSP Chip | 194 |
| | 12.4 Realization Forms for Filters | 196 |
| Chapter | 13. Digital Integration | 207 |
| | 13.1 Introduction to Digital Integration | 207 |
| | 13.2 Digital Integration of Known Signals | 209 |
| | 13.3 Digital Integration for Differential Equation Solution | 214 |
| | Appendix A: Laplace Transform Tables | 223 |
| | Appendix B: Entering a Mathcad Program | 227 |
| | Index | 229 |
