

# Networks and Devices Using Planar Transmission Lines

Franco Di Paolo

<b>CHAPTER 1 Fundamental Theory of Transmission Lines</b> .....	1
1.1 Generalities .....	1
1.2 "Telegraphist" and "Transmission Line" Equations .....	2
1.3 Solutions of Transmission Line Equations.....	5
1.4 Propagation Constant and Characteristic Impedance.....	8
1.5 Transmission Lines with Typical Terminations .....	11
1.6 "Transmission" and "Impedance" Matrices .....	15
1.7 Consideration About Matching Transmission Lines .....	18
1.8 Reflection Coefficients and Standing Wave Ratio .....	21
1.9 Nonuniform Transmission Lines .....	29
1.10 Quarter Wave Transformers .....	33
1.11 Coupled Transmission Lines .....	40
1.12 The Smith Chart.....	55
1.13 Some Examples Using the Smith Chart.....	62
1.14 Notes on Planar Transmission Line Fabrication .....	68
References .....	69
 <b>CHAPTER 2 Microstrips</b> .....	 71
2.1 Geometrical Characteristics .....	71
2.2 Electric and Magnetic Field Lines .....	72
2.3 Solution Techniques for the Electromagnetic Problem .....	73
2.4 Quasi Static Analysis Methods.....	74
2.5 Coupled Modes Analysis Method .....	77
2.6 Full Wave Analysis Method.....	78
2.7 Design Equations .....	80
2.8 Attenuation.....	83
2.9 Practical Considerations .....	87
References .....	88
 <b>CHAPTER 3 Striplines</b> .....	 91
3.1 Geometrical Characteristics .....	91
3.2 Electric and Magnetic Field Lines .....	92
3.3 Solution Techniques for the Electromagnetic Problem .....	92
3.4 Extraction of Stripline Impedance with a Conformal Transformation.....	93
3.5 Design Equations .....	95
3.6 Attenuation.....	97
3.7 Offset Striplines .....	100
3.8 Practical Considerations .....	100
References .....	102
 <b>CHAPTER 4 Higher Order Modes and Discontinuities in <math>\mu</math>Strip and Stripline</b> .....	 105
4.1 Radiation .....	105
4.2 Surface Waves.....	107
4.3 Higher Order Modes .....	109
4.4 Typical Discontinuities .....	112
4.5 Bends.....	113
4.6 Open End .....	116

4.7	Gap.....	118
4.8	Change of Width.....	120
4.9	"T" Junctions.....	122
4.10	Cross Junction.....	125
	References.....	127
<b>CHAPTER 5 Coupled Microstrips.....</b>		<b>131</b>
5.1	Geometrical Characteristics.....	131
5.2	Electric and Magnetic Field Lines.....	131
5.3	Solution Techniques for the Electromagnetic Problem.....	133
5.4	Quasi Static Analysis Methods.....	133
5.5	Coupled Modes Analysis Method.....	135
5.6	Full Wave Analysis Method.....	137
5.7	Design Equations.....	139
5.8	Attenuation.....	144
5.9	A Particular Coupled Microstrip Structure: The Meander Line.....	147
	References.....	152
<b>CHAPTER 6 Coupled Striplines.....</b>		<b>155</b>
6.1	Geometrical Characteristics.....	155
6.2	Electric and Magnetic Field Lines.....	156
6.3	Solution Techniques for the Electromagnetic Problem.....	158
6.4	Design Equations.....	159
6.5	Attenuation.....	164
6.6	A Particular Coupled Stripline Structure: The Meander Line.....	167
6.7	Practical Considerations.....	173
	References.....	173
<b>CHAPTER 7 Microstrip Devices.....</b>		<b>175</b>
7.1	Simple Two Port Networks.....	175
7.2	Directional Couplers.....	184
7.3	Signal Combiners.....	238
7.4	Directional Filters.....	248
7.5	Phase Shifters.....	257
7.6	The Three Port Circulator.....	272
7.7	Ferrimagnetic Phase Shifters.....	282
7.8	Ferrimagnetic Isolators.....	294
7.9	Comparison among Ferrimagnetic Phase Shifters.....	295
	References.....	296
<b>CHAPTER 8 Stripline Devices.....</b>		<b>301</b>
8.1	Introduction.....	301
8.2	Typical Two Ports Networks.....	301
8.3	Directional Couplers.....	301
8.4	Signal Combiners.....	302
8.5	Directional Filters.....	302
8.6	Phase Shifters.....	302
8.7	The Three Port Circulator.....	303
8.8	Ferrimagnetic Phase Shifters.....	305

8.9 Ferrimagnetic Isolators .....	310
8.10 Comparison among Ferrimagnetic Phase Shifters .....	311
References .....	311
<b>CHAPTER 9 Slot Lines</b> .....	<b>313</b>
9.1 Geometrical Characteristics .....	313
9.2 Electric and Magnetic Field Lines .....	313
9.3 Solution Techniques for the Electromagnetic Problem .....	315
9.4 Closed Form Equations for Slot Line Characteristic Impedance .....	319
9.5 Connections Between Slot Lines and Other Lines .....	322
9.6 Typical Nonferrimagnetic Devices Using Slotlines .....	326
9.7 Magnetization of Slot Lines on Ferrimagnetic Substrates .....	329
9.8 Slot Line Isolators .....	331
9.9 Slot Line Ferrimagnetic Phase Shifters .....	335
9.10 Coupled Slot Lines .....	338
References .....	341
<b>CHAPTER 10 Coplanar Waveguides</b> .....	<b>345</b>
10.1 Geometrical Characteristics .....	345
10.2 Electric and Magnetic Field Lines .....	346
10.3 Solution Techniques for the Electromagnetic Problem .....	347
10.4 Closed Form Equations for "CPW" Characteristic Impedance .....	351
10.5 Closed Form Equations for "CPW" Attenuation .....	353
10.6 Connections Between "CPW" and Other Lines .....	356
10.7 Typical Nonferrimagnetic Devices Using "CPW" .....	359
10.8 Magnetization of "CPW" on Ferrimagnetic Substrates .....	362
10.9 "CPW" Isolators .....	363
10.10 "CPW" Ferrimagnetic Phase Shifters .....	365
10.11 Practical Considerations .....	368
10.12 Coupled Coplanar Waveguides .....	370
References .....	373
<b>CHAPTER 11 Coplanar Strips</b> .....	<b>377</b>
11.1 Geometrical Characteristics .....	377
11.2 Electric and Magnetic Field Lines .....	378
11.3 Solution Techniques for the Electromagnetic Problem .....	378
11.4 Design Equations .....	381
11.5 Attenuation .....	382
11.6 Connections Between "CPS" and Other Lines .....	385
11.7 Use of "CPS" .....	385
References .....	386
<b>APPENDIX 1 Solution Methods for Electrostatic Problems</b> .....	<b>389</b>
A1.1 The Fundamental Equations of Electrostatics .....	389
A1.2 Generalities on Solution Methods for Electrostatic Problems .....	394
A1.3 Finite Difference Method .....	395
A1.4 Image Charge Method .....	397
A1.5 Fundamentals on Functions with Complex Variables .....	400
A1.6 Conformal Transformation Method .....	403

A1.7	The Schwarz-Christoffel Transformation.....	404
	References.....	408
<b>APPENDIX 2 Wave Equation, Waves, and Dispersion .....</b>		<b>409</b>
A2.1	Introduction.....	409
A2.2	Maxwell's Equations and Boundary Conditions.....	409
A2.3	Wave Equations in Harmonic Time Dependence .....	411
A2.4	The Propagation Vectors and Their Relationships with Electric and Magnetic Fields.....	414
A2.5	The Time Dependence.....	417
A2.6	Plane Wave Definitions.....	417
A2.7	Evaluation of Electromagnetic Energy.....	419
A2.8	Waves in Guiding Structures with Curvilinear Orthogonal Coordinates Reference System .....	421
A2.9	"TE" and "TM" Modes in Rectangular Waveguide.....	426
A2.10	"TE" and "TM" Modes in Circular Waveguide.....	432
A2.11	Uniform Plane Waves and "TEM" Equations.....	441
A2.12	Dispersion .....	449
A2.13	Electrical Networks Associated with Propagation Modes.....	452
A2.14	Field Penetration Inside Nonideal Conductors .....	459
	References.....	464
<b>APPENDIX 3 Diffusion Parameters and Multiport Devices .....</b>		<b>465</b>
A3.1	Simple Analytical Network Representations.....	465
A3.2	Scattering Parameters and Conversion Formulas.....	467
A3.3	Conditions on Scattering Matrix for Reciprocal and Lossless Networks .....	471
A3.4	Three Port Networks.....	472
A3.5	Four Port Networks.....	476
A3.6	Quality Parameters for Directional Couplers.....	478
A3.7	Scattering Parameters in Unmatched Case .....	481
	References.....	482
<b>APPENDIX 4 Resonant Elements, "Q", Losses .....</b>		<b>483</b>
A4.1	The Intrinsic Losses of Real Elements .....	483
A4.2	The Quality Factor "Q" .....	484
A4.3	Elements of Filter Theory.....	490
A4.4	Butterworth, Chebyshev, and Cauer Low Pass Filters.....	492
A4.5	Filter Generation from a Normalized Low Pass .....	498
A4.6	Filters with Lossy Elements .....	503
	References.....	506
<b>APPENDIX 5 Charges, Currents, Magnetic Fields, and Forces .....</b>		<b>507</b>
A5.1	Introduction.....	507
A5.2	Some Important Relationships of Classic Mechanics.....	507
A5.3	Forces Working on Lone Electric Charges .....	511
A5.4	Forces Working on Electrical Currents .....	514
A5.5	Magnetic Induction Generated by Currents .....	515
A5.6	Two Important Relationships of Quantum Mechanics .....	517
A5.7	The Foundations of Atom Theory .....	518

A5.8	The Atom Structure in Quantum Mechanics .....	521
A5.9	The Precession Motion of the Atomic Magnetic Momentum .....	524
A5.10	Principles of Wave Mechanics.....	530
	References.....	535
<b>APPENDIX 6 The Magnetic Properties of Materials.....</b>		<b>537</b>
A6.1	Introduction.....	537
A6.2	Fundamental Relationships for Static Magnetic Fields and Materials.....	537
A6.3	The Definitions of Materials in Magnetism.....	539
A6.4	Statistics Functions for Particles Distribution in Energy Levels.....	540
A6.5	Statistic Evaluation of Atomic Magnetic Moments.....	546
A6.6	Anisotropy, Magnetostriction, Demagnetization in Ferromagnetic Materials.....	549
A6.7	The Weiss Domains in Ferromagnetic Materials.....	550
A6.8	Application of Weiss' Theory to Some Ferromagnetic Phenomena.....	552
A6.9	The Heisenberg Theory for the Molecular Field.....	556
A6.10	Ferromagnetic Materials and Their Applications.....	559
A6.11	Antiferromagnetism .....	559
A6.12	Ferrimagnetism .....	560
	References.....	561
<b>APPENDIX 7 The Electromagnetic Field and the Ferrite.....</b>		<b>563</b>
A7.1	Introduction.....	563
A7.2	The Chemical Composition of Ferrites.....	563
A7.3	The Ferrite Inside a Static Magnetic Field.....	564
A7.4	The Permeability Tensor of Ferrites.....	567
A7.5	"TEM" Wave Inside an Isodirectional Magnetized Ferrite .....	577
A7.6	Linear Polarized, Uniform Plane Wave Inside an Isodirectional Magnetized Ferrite: The Faraday Rotation .....	585
A7.7	Electromagnetic Wave Inside a Transverse Magnetized Ferrite.....	589
A7.8	Considerations on Demagnetization and Anisotropy.....	594
A7.9	The Behavior of Not Statically Saturated Ferrite .....	598
A7.10	The Quality Factor of Ferrites at Resonance.....	600
A7.11	Losses in Ferrites.....	601
A7.12	Isolators, Phase Shifters, Circulators in Waveguide with Isodirectional Magnetization.....	603
A7.13	Isolators, Phase Shifters, Circulators in Waveguide with Transverse Magnetization.....	608
A7.14	Field Displacement Isolators and Phase Shifters.....	611
A7.15	The Ferrite in Planar Transmission Lines.....	619
A7.16	Other Uses of Ferrite in the Microwave Region.....	625
A7.17	Use of Ferrite Until UHF.....	627
A7.18	Harmonic Signal Generation in Ferrite.....	628
A7.19	Main Resonance Reduction and Secondary Resonance in Ferrite.....	630
	References.....	633
<b>APPENDIX 8 Symbols, Operators Definition, and Analytical Expressions.....</b>		<b>635</b>
A8.1	Introduction.....	635
A8.2	Definitions of Symbols and Abbreviations .....	635
A8.3	Operators' Definitions and Associated Identities .....	637

A8.4	Delta Operator Functions in a Cartesian Orthogonal Coordinate System .....	638
A8.5	Delta Operator Functions in a Cylindrical Coordinate System .....	640
A8.6	Delta Operator Functions in a Spherical Coordinate System .....	642
A8.7	The Divergence and Stokes Theorems and Green Identities .....	644
A8.8	Elliptic Integrals and Their Approximations .....	646
References	.....	647

<b>INDEX</b> .....	649
