

APPLIED MATHEMATICAL METHODS for CHEMICAL ENGINEERS

Norman W. Loney

Contents

Chapter 1 Differential Equations

1.1 Introduction	1
1.2 Ordinary Differential Equations	2
References	4

Chapter 2 First Order Ordinary Differential Equations

2.1 Linear Equations	5
2.2 Additional Information on Linear Equations	14
2.3 Nonlinear Equations	18
2.3.1 Separable Equations	19
2.3.2 Exact Equations	21
2.3.3 Homogeneous Equations	23
2.4 Problem Setup	23
2.5 Problems	30
References	33

Chapter 3 Linear Second Order Ordinary Differential Equations

3.1 Introduction	35
3.2 Fundamental Solutions of the Homogeneous Equation	38
3.3 Homogeneous Equations with Constant Coefficients	40
3.4 Nonhomogeneous Equations	45
3.4.1. Method of Variation of Parameters	53
3.5 Variable Coefficient Problems	57
3.5.1 Series Solutions Near a Regular Singular Point	59
3.6 Alternative Methods	65
3.6.1 Initial Value Problems	69
3.6.2 Some Useful Properties of Laplace Transforms	75
3.6.3 Inverting the Laplace Transform	78
3.6.4 Taylor Series Solution of Initial Value Problems	84
3.7 Applications of Second Order Differential Equations	87
3.8 Problems	115
References	120

Chapter 4 Sturm-Liouville Problems

4.1 Introduction	123
4.2. Classification of Sturm-Liouville Problems	124
4.2.1. Properties of the Eigenvalues and Eigenfunctions of a Sturm-Liouville Problem	133

4.3 Eigenfunction Expansion	137
4.4 Problems	139
References	141

Chapter 5 Fourier Series and Integrals

5.1 Introduction	143
5.2 Fourier Coefficients	146
5.3 Arbitrary Interval	151
5.4 Cosine and Sine Series	153
5.5 Convergence of Fourier Series	158
5.6 Fourier Integrals	166
5.7 Problems	176
References	176

Chapter 6 Partial Differential Equations

6.1 Introduction	177
6.2 Separation of Variables	179
6.2.1 Boundary Conditions	183
6.3 The Nonhomogeneous Problem and Eigenfunction Expansion	211
6.4 Laplace Transform Methods	221
6.5 Combination of Variables	229
6.6 Fourier Integral Methods	237
6.7 Regular Perturbation Approaches	241
6.8 Problems	257
References	260

Chapter 7 Applications of Partial Differential Equations in Chemical Engineering

7.0 Introduction	263
7.1 Heat Transfer	263
7.2 Mass Transfer	281
7.3 Comparison Between Heat and Mass Transfer Results	293
7.4 Simultaneous Diffusion and Convection	296
7.5 Simultaneous Diffusion and Chemical Reaction	302
7.6 Simultaneous Diffusion, Convection, and Chemical Reaction	315
7.7 Viscous Flow	330
7.8 Problems	342
References	350

Chapter 8 Dimensional Analysis and Scaling of Boundary Value Problems

8.1 Introduction	353
8.2 A Classical Approach to Dimensional Analysis	355
8.3 Finding the π s	357
8.4 Scaling Boundary Value Problems	364

8.5 Problems.....	376
References.....	378

Chapter 9 Selected Numerical Methods and Available Software Packages

9.1 Introduction and Philosophy	379
9.2 Solution of Nonlinear Algebraic Equations	379
9.2.1 The Newton-Raphson Method	385
9.2.2 The Modified Newton-Raphson Method	386
9.3 Solution of Simultaneous Linear Algebraic Equations.....	388
9.3.1 Error Estimate.....	399
9.4 Solution of Ordinary Differential Equations.....	405
9.4.1 Initial Value Problems	405
9.4.2 Boundary Value Problems	413
9.4.3 Systems of Ordinary Differential Equations	418
9.5 Solution of Partial Differential Equations.....	420
9.6 Chapter Summary.....	423
9.7 Problems.....	424
References.....	426

Appendix A Elementary Properties of Determinants and Matrices	429
--	------------

Index.....	445
