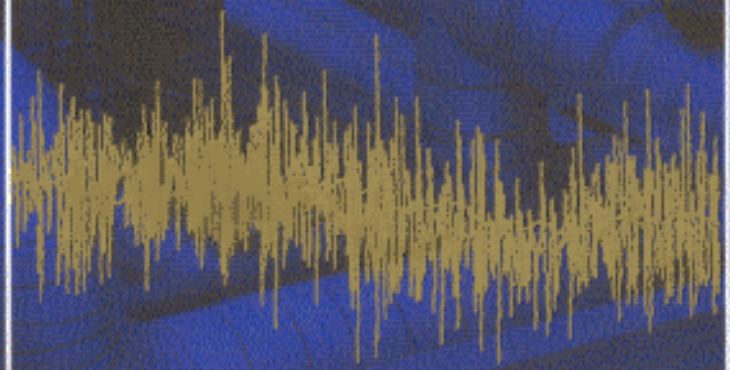
WILEY

INDUSTRIAL CONTROL SYSTEMS DESIGN



MICHAEL J GRIMBLE

Contents

Preface xv

1 Introduction to Advanced Industrial Control 1

1.1 Introduction 1
- 1.1.1 Hierarchical Modelling and Control 3
- 1.1.2 Benefits of Advanced Process Control 4
- 1.1.3 Frequency Domain and State Space Methods 5

1.2 Robust Control Design 7
- 1.2.1 Models for Plant Uncertainty 7
- 1.2.2 Uncertainties in Multivariable Systems 8
- 1.2.3 Robust Stability and Performance 10
- 1.2.4 Robust Controllers: Limitations and Advantages 11
- 1.2.5 Structured Singular Values 12
- 1.2.6 Linear Matrix Inequalities 12

1.3 Fault-tolerant Control Systems 13
- 1.3.1 Summary of Terms in Fault-tolerant Control 14
- 1.3.2 Summary of Terms in Fault Monitoring 14
- 1.3.3 Fault Monitoring and Diagnosis 16
- 1.3.4 Redundancy in Fault and Failure Diagnosis Methods 18
- 1.3.5 Control Reconfiguration 20
- 1.3.6 Multiple Model Approach 22
- 1.3.7 Safety Critical Control System Design 25

1.4 Intelligent Control and Artificial Intelligence 25
- 1.4.1 Artificial Neural Networks 26
- 1.4.2 Fuzzy Control 27
- 1.4.3 Expert Systems and Knowledge Based Systems 28
- 1.4.4 Genetic Algorithms 28

1.5 Total Control and Systems Integration 29
- 1.5.1 Systems Integration and Fault Conditions 30

1.6 Concluding Remarks 31

1.7 References 31

I Polynomial System Descriptions 37

2 H_2 Optimal and Feedforward Control 39

2.1 Introduction 39
2.1.1 Industrial Controller Structures 40
2.1.2 Discrete-time Models and Terminology 42

2.2 Wiener Feedforward/Feedback Solution 43
2.2.1 System Model and Signals 44
2.2.2 LQG Control Problem and Wiener-Hopf Theorem 46
2.2.3 Wiener-Hopf Solution of 3 DOF Control Problem 47
2.2.4 Wiener-Hopf Cost-function Minimisation 50
2.2.5 Structure of the Wiener-Hopf Optimal Solution 60

2.3 Polynomial Feedforward/Feedback Solution 51
2.3.1 Polynomial System Description and Solution 52
2.3.2 Three DOF Control Law Proof 55
2.3.3 Cost-function Minimisation 58
2.3.4 Optimal Solution: Properties and Structure 60

2.4 Multiple DOF LQG Control Problem 71
2.4.1 Polynomial System Description 73
2.4.2 Feedback/Feedforward System Equations 74
2.4.3 Error and Control Signal Costing Terms 75
2.4.4 Cost-function and Optimal Control Solution 76
2.4.5 Invariance Property 81

2.5 Design of Feedforward Controllers 82
2.5.1 Feedforward in Dynamic Ship Positioning Systems 83

2.6 Concluding Remarks 96

2.7 References 96

3 H_2 Predictive Optimal Control 101

3.1 Introduction 101
3.1.1 The LQGPC Solution Strategy 102
3.1.2 Applications of Predictive Control 102
3.1.3 Predictive Control Terminology 102

3.2 GPC System Description and Prediction 103
3.2.1 Optimal Linear Predictor 104
3.2.2 Derivation of the Predictor 104

3.3 Generalised Predictive Control Law 107
3.3.1 Solution for the GPC Optimal Control Law 107
3.3.2 Algorithm for the GPC Optimal Control Law 109
3.3.3 Relationship Between GMV and GPC Control 112
3.3.4 Predictive Control Laws Properties and Problems 113

3.4 Linear Quadratic Gaussian Predictive Control 114

3.4.1 Introduction 114
3.4.2 Plant and Disturbance Description 115
3.4.3 Optimal Linear Predictor 117
3.4.4 Stochastic Generalised Predictive Optimal Control 119
3.4.5 Solution of the LQGPC Problem 120
3.4.6 Vector-matrix Computation of Future Controls 126
3.4.7 Vector-matrix Form of the LQGPG Algorithm 129
3.4.8 The Value of Disturbance Prediction 139
3.4.9 Quadratic Programming Theory 140

3.5 Concluding Remarks 141

3.6 References 142

4 H_2 Multivariable Control 147

4.1 Introduction 147

4.2 Combined Fault Estimation and Control 148
4.2.1 System Description 150
4.2.2 LQG Sensitivity Reduction and Fault Estimation 154
4.2.3 Minimisation of the Combined Criterion 158
4.2.4 Wiener Solution of the Combined Problem 161
4.2.5 Polynomial Solution of the Combined Problem 162
4.2.6 Scalar Continuous-time Results 163
4.2.7 Marine Roll Stabilisation Example 165
4.2.8 Remarks on Combined Control/Fault Estimation 174

4.3 Separation Principle for Polynomial Systems 175
4.3.1 Polynomial System Description 176
4.3.2 Noise Free Output Feedback Control Problem 177
4.3.3 Discrete-time Output Estimation Problem 183
4.3.4 Output Feedback Problem and Separation Principle 190
4.3.5 Alternative Separation Principle Result 192
4.3.6 Closed-loop System Stability 194
4.3.7 Flight Control Example 195

4.4 Concluding Remarks 204

4.5 References 205

5 H_∞ Optimal Control Laws 207

5.1 Introduction 207

5.2 Scalar H_∞ Feedback/Feedforward Control 208
5.2.1 LQG Embedding Principle 209
5.2.2 Mixed H_2 and H_∞ Cost Minimisation 210
5.2.3 Equalising Solutions 211
5.2.4 The GH_∞ Cost Function and Computations 212
5.2.5 Summary of Scalar H_2/H_∞ Results 214

5.3 Single-input Multi-output Control Design 215

5.3.1 *SIMO System Description* 215
5.3.2 The H_2 SIMO Control Problem 220
5.3.3 The H_∞ SIMO Control Problem 223
5.3.4 Mixed H_2 and H_∞ Cost Minimisation Problems 224
5.3.5 Computation of the GH_∞ Controllers 224

5.4 H_∞ Predictive Optimal Control Laws 226
5.4.1 Plant and Disturbance Description 227
5.4.2 Review of the LQGPC Control Law 227
5.4.3 Vector-matrix Form of LQGPC Algorithm 229
5.4.4 The H_∞ Predictive Control Problem 231
5.4.5 The Equalising H_∞ GPC Solution 232

5.5 Need for Adaptation and H_∞ Robustness 233

5.6 Concluding Remarks 234

5.7 References 234

6 H_2 and H_∞ Filtering and Prediction 239

6.1 Introduction 239

6.2 H_2 Estimation Using Probabilistic Models 240
6.2.1 Uncertain Signal Model and Noise Descriptions 241
6.2.2 The H_2 Cost Minimisation Problem and Theorem 244
6.2.3 Solution of Uncertain H_2 Deconvolution Problems 246
6.2.4 Properties of the H_2 Estimator 250

6.3 H_∞ Optimal Estimation Problems 252
6.3.1 H_∞ Robust Estimator and Uncertainty 252
6.3.2 H_∞ Estimation and Embedding 255
6.3.3 Derivation of the Weighting Filter W_e 256
6.3.4 The H_∞ Estimator and Example 257

6.4 Standard System for H_2 Estimation 260
6.4.1 Signal Processing Standard System Description 261
6.4.2 Polynomial Models and System Equations 263
6.4.3 The Standard H_2 Optimal Estimation Problem 265

6.5 Standard System for H_∞ Estimation 267
6.5.1 Relationship between H_2 and H_∞ Problems 267
6.5.2 Derivation of the Weighting Filter W_λ 268
6.5.3 H_∞ Optimal Estimator for the Standard System 270
6.5.4 Properties of the Optimal Estimator 271
6.5.5 Deconvolution Filtering Problem Example 272
6.5.6 Multivariable Estimation Problems 275

6.6 Concluding Remarks 275

6.7 References 276

II State Space and Frequency Response Descriptions 281

7 H_2 and H_∞ State-space Control and Filtering 283

7.1 Introduction 283
7.1.1 Smith Predictor 284

7.2 Wiener-Hopf Optimal Controller 285
7.2.1 Discrete-time System Description 286
7.2.2 The LQG Stochastic Regulating Problem 288
7.2.3 Wiener-Hopf Solution for Optimal Controller 291

7.3 State-space Form of Optimal Controller 295
7.3.1 LQG Output Feedback Controller 297
7.3.2 Finite-impulse Response Form of Control Law 301
7.3.3 Stability of the Closed Loop System 304
7.3.4 Unstable Open Loop Plant Example 305
7.3.5 Relationship to the Smith Predictor 311
7.3.6 Hot Strip Mill Profile Control Example 312
7.3.7 Remarks on LQG Delay Compensation 322

7.4 H_∞ State-space Control and Estimation 322
7.4.1 H_∞ State Regulation Problem 323
7.4.2 H_∞ State Estimation Problem 324
7.4.3 Output Feedback Control Problem 326

7.5 Concluding Remarks 330

7.6 References 331

8 State-space Predictive Optimal Control 335

8.1 Introduction 335
8.1.1 Model Based Predictive Control 336
8.1.2 Set-point Optimisation 336

8.2 State-space Form of GPC Controller 337
8.2.1 Prediction Modelling 339
8.2.2 GPC Performance Index and Optimal Solution 340

8.3 State-space Form of LQGPC Controller 341
8.3.1 LQGPC Dynamic Performance Index 341
8.3.2 The Deterministic Problem 343
8.3.3 Stochastic Disturbance Case 347

8.4 State-space GPC with Through Terms 349
8.4.1 GPC Performance Index and Optimal Solution 355

8.5 State-space LQGPC with Through Terms 356
8.5.1 Augmented System Model Including Through Terms 358
8.5.2 Current and Future Tracking Error Terms 359
8.5.3 LQGPC Dynamic Performance Criterion 361
8.5.4 Separation Principle Proof 363

8.5.5 The Discrete-time Kalman Filter 364

8.6 LQ State-space Predictive Optimal Control 366
8.6.1 System Description 366
8.6.2 LQ State Feedback Predictive Control Problem 367

8.7 LQG Predictive State Estimate Feedback 370
8.7.1 LQG State Estimate Feedback for Finite-time Cost 372
8.7.2 Receding-horizon Optimal Control 373

8.8 Concluding Remarks 374

8.9 References 375

9 QFT and Frequency Domain Design 379

9.1 Introduction 379

9.2 Quantitative Feedback Theory 380
9.2.1 Frequency Responses and the Nichols Chart 385
9.2.2 Stability Criterion 386
9.2.3 Uncertainty and Plant Templates 387
9.2.4 QFT Design for Single-input Single-output Systems 390
9.2.5 The QFT Design Procedure Example 397
9.2.6 Summary of Design Steps 409

9.3 QFT for Multi-input Multi-output Systems 410
9.3.1 Nonlinear QFT 412
9.3.2 QFT and its Relationship to H_∞ Control Theory 412
9.3.3 Disadvantages of the QFT Design Approach 415
9.3.4 Advantages of the QFT Approach 415

9.4 Concluding Remarks 415

9.5 References 416

III Industrial Applications 419

10 Power Generation and Transmission 421

10.1 Introduction 421
10.1.1 Automatic Voltage Regulator Design 423
10.1.2 Synchronous Machine Stability 424

10.2 Automatic Voltage Regulator Design 425
10.2.1 Electro-mechanical Equations 426
10.2.2 Electro-mechanical Oscillations 427
10.2.3 Nonlinear Operation 429
10.2.4 Additional Feedback Control Signals 429

10.3 H_2 Automatic Voltage Regulator Design 431
10.3.1 Frequency and Time-domain Results 434

10.4 H_∞ Automatic Voltage Regulator Design 443
10.4.1 Frequency and Time Domain Results 447
10.5 Failure Detection and Systems Integration 454
10.6 Conclusions 455
10.7 References 455

11 Design of Controllers for Metal Processing 459

11.1 Introduction 459
11.1.1 Hot Strip Mill Objectives 460
11.1.2 Background on Multivariable Control in Hot Mills 461
11.1.3 Finishing Mill Features 463
11.2 Hot Mill Modelling 465
11.2.1 Mill Equations 467
11.2.2 Gaugemeter Principle in Classical Control 467
11.2.3 Measurements 468
11.3 Control of Interstand Tension 469
11.3.1 Strip Tension Calculation 470
11.3.2 Classical Design of Looper Control Systems 472
11.3.3 Classical Gauge Control System Design 474
11.4 Flatness and Profile Control 474
11.4.1 Factors Affecting the Strip Profile 476
11.4.2 Parameterisation of Strip Profile and Flatness 476
11.4.3 Hot Mill Shape Measurement 477
11.4.4 Flatness Control Systems 477
11.4.5 Thickness Profile Control 478
11.5 Classical Control of Hot Strip Mills 480
11.5.1 Classical Gauge and Tension Control 481
11.5.2 Classical Cordinate Control 481
11.6 Hot Rolling Mill Advanced Control Design 482
11.6.1 Summary of Control Requirements 483
11.6.2 Mill Modulus Uncertainty 483
11.6.3 Advanced Mill Control Structure 488
11.6.4 Performance and Disturbance Weightings 491
11.6.5 Stand Zone Control Design Philosophy 493
11.6.6 Plant and Controller Frequency Responses 496
11.6.7 Hot Strip Mill Simulation Results 503
11.6.8 Reliable Tension Control 509
11.7 Coordinated Control 511
11.8 Concluding Remarks 515
11.9 References 516

12 Marine Control Systems 521

12.1 Introduction 521

12.2 Fin Roll Stabilisation Control Systems 522
12.2.1 System Description 522
12.2.2 Selection of H_∞ Cost Function Weightings 525
12.2.3 Frequency Responses Results 527
12.2.4 Time Response Results 529
12.2.5 H_∞ Fin Roll Stabilisation Progress 532

12.3 Robust Ship Positioning Systems Design 532
12.3.1 H_∞ Design of Dynamic Ship Positioning Systems 534
12.3.2 Advantages of H_∞ Design in Ship Positioning 535
12.3.3 Polynomial Based H_∞ Ship Positioning Design 537
12.3.4 Frequency Responses 539
12.3.5 Time Responses 544
12.3.6 Feedforward Controller Tuning 547

12.4 Multivariable State-space Ship Positioning 549
12.4.1 Dynamic Ship Positioning Multivariable Models 551
12.4.2 The Ship Positioning Criterion 553
12.4.3 Multivariable Ship Positioning Example 556
12.4.4 Adaptation and Future Generation 564

12.5 Concluding Remarks 564

12.6 References 564

13 Aero-engine and Flight Control Design 569

13.1 Introduction 569

13.2 Aero-engine Gas Turbine Control 569
13.2.1 Introduction to Gas Turbine Control 570
13.2.2 The Engine and Gas Turbine Control Problem 572
13.2.3 Major Engine Components 573
13.2.4 Surge Margin and Working Lines 575
13.2.5 Classical Gas Turbine Control and Design 577
13.2.6 Gas Turbine Control Design Study 578
13.2.7 Remarks on the Gas Turbine Control Problem 596

13.3 Introduction to Flight Control Design 596
13.3.1 Dynamic Modes of Aircraft 598
13.3.2 Vectored Thrust Aircraft 598
13.3.3 Problems In Flight Control Systems Design 602
13.3.4 The Aircraft Model 603
13.3.5 Flight Control Loop Design 607

13.4 Concluding Remarks 614

13.5 References 615
