

James Westervelt

Contents

Preface	v
List of Figures	x
Introduction	xi
I HISTORY, THEORY, AND CHALLENGES	1
1 CHARACTERIZING WATERSHED AND LANDSCAPE MANAGEMENT	3
1.1 Locally Led Watershed Management	3
1.2 Management Committees and Plans	6
2 CHALLENGES OF MANAGEMENT AND MODELING	9
2.1 Simulation Modeling Objectives	14
2.2 Which Comes First, Data or Models?	18
2.3 Making Modeling Cost Effective	19
2.4 How Formal Should a Model Be?	21
3 PERSPECTIVES IN ECOLOGICAL MODELING AND SIMULATION	27
3.1 Underlying Theories of Ecology	27
3.2 Ecological Simulation Software	37
4 PERSPECTIVES IN HYDROLOGIC MODELING AND SIMULATION	41
4.1 Simulation Models	42
4.2 The Role of Geographic Information Systems	47
II CHOOSING MODELS AND MODELING ENVIRONMENTS	51
5 QUESTIONS ADDRESSED WITH SINGLE- DISCIPLINE SIMULATION MODELS	53
5.1 Questions Addressed by Surface Water Erosion and Pollution Models	53
5.2 River Management	55

5.3	Stream Management	57
5.4	Plant Community Succession	58
5.5	Urban Growth	60
6	QUESTIONS ADDRESSED WITH MULTIDISCIPLINE SIMULATION MODELS	63
6.1	Sample Model Integration Environments	65
6.2	Sample Multidisciplinary Models	68
7	CREATING NEW MODELS	72
7.1	Geographic Information Systems-Based Approaches	72
7.2	Introductory Dynamic Modeling Software	74
7.3	Power Dynamic Modeling Software	78
8	COORDINATING LARGE-SCALE, INTERDISCIPLINARY WATERSHED MODELING	81
8.1	Modeling Steps	82
8.2	Management Concerns	94
8.3	Conclusions	96
9	ANALYZING ALTERNATIVES	97
9.1	Decision Trade-Off Analysis	97
9.2	Approach to Analysis	99
9.3	Summary	102
10	WHO DEVELOPS AND RUNS THE MODELS?	103
11	ERROR AND UNCERTAINTY ANALYSIS	107
11.1	Sources of Error	108
11.2	Tracking Error and Uncertainty	111
12	MODEL EVALUATION GUIDELINES	114
12.1	Requirements Identification	114
12.2	Establishing Modeling Expectations	116
12.3	Model Selection Criteria	117
12.4	Modeling Environment Selection Criteria	122
III	AN INTEGRATED WATERSHED MODELING AND SIMULATION FUTURE	131
13	APPROACHES TO FUTURE MODEL INTEGRATION	133
13.1	Common User Interface	134
13.2	Scientific Models Integrated Behind Management Models	136
13.3	Scientific Models Converted to Management Model Modules	138
13.4	New Management Models	140
13.5	New Modeling Languages	141
14	DESIGN PHILOSOPHIES	143
14.1	Embrace Current Ecological, Economic, and Management Theories	143

14.2	Use Existing Code	144
14.3	Minimize the Number of Authors of Any Given Module	145
14.4	Embrace Legacy Software	145
14.5	Design Everything to Be Modular	146
14.6	Distributed	146
14.7	Multiple Interface Levels	147
14.8	Model Components as Objects	147
15	WATERSHED MANAGER'S VIEW	149
15.1	System Design Philosophy	149
15.2	Multiple Models	150
15.3	Model Modification	152
16	MODELER'S VIEW	154
16.1	Audience	154
16.2	Imagine	154
16.3	System Design Philosophy	161
16.4	Model Control Center	162
16.5	Subsystems	164
16.6	Viewers and Controllers	166
17	PROGRAMMER'S VIEW	169
17.1	Audience	169
17.2	System Design Philosophy	169
17.3	System Overview	170
17.4	Subsystem Encapsulation	171
17.5	Data Cache Objects and the Data Register	173
17.6	Simulation Timekeeper	174
17.7	Viewers and Controllers	174
17.8	Implementation Approaches	175
	Conclusions	177
	References	179
	Appendix	186
	Index	188
