
Functional Genomics

Edited by

Stephen P. Hunt and
Frederick J. Livesey

PRACTICAL
APPROACH

Contents

Preface *page v*
List of protocols *xiii*
Abbreviations *xvii*

1 Functional genomics: approaches and methodologies *1*
F.J. Livesey and S.P. Hunt
1 Introduction: functional genomics *1*
2 Current methods in functional genomics *1*
3 About this book *3*
4 Future developments in functional genomics *5*

2 Construction and screening of a subtractive cDNA library *9*
Armen N. Akopian and John N. Wood
1 Introduction *9*
2 Reagents, equipment, deoxyribonuclease-free and ribonuclease-free conditions *10*
3 Preparation of nucleic acid probes for subtractive hybridization *11*
Type of probes for target and driver *11*
The choice of target and driver tissues *11*
Preparation of poly(A)$^+$ RNA from driver and target tissues *12*
Synthesis of target ss-cDNA with adapter-primer *15*
Biotinylation of driver-poly(A)$^+$ RNA *17*
4 Subtractive hybridization *18*
5 Construction of subtractive cDNA library *19*
Converting subtracted ss-cDNA into ds-cDNA for the construction of a subtractive cDNA library *19*
Klenow fragment or Taq polymerase? *20*
Multistage PCR of ss-cDNA *20*
Choice of vector and generation of a subtractive cDNA library *23*
6 Differential and confirmatory screening of subtractive cDNA library *26*
Sensitivity of the screening *26*
Artefacts and controls *27*

7 Basic analysis of specific transcripts 29
8 Conclusions 30
Acknowledgements 31

3 Differential display analysis of alteration in gene expression 33
Yong-Jing Cho and Peng Liang
1 Introduction 33
2 Principle of differential display 33
3 Methods 34
Materials and equipment 34
Differential display—a detailed protocol 36
Recovery and amplification of cDNAs from differential display gels 38
4 Practical considerations for differential display 40
Factors affecting differential display 40
Theoretical considerations 42
Acknowledgments 42

4 Representational difference analysis of cDNA 45
M. Hubank and D.G. Schatz
1 Introduction 45
2 Principles of cDNA RDA 46
Genomic RDA and cDNA RDA 46
Representations 46
PCR-coupled subtractive hybridization 47
3 Experimental design 47
4 Application of cDNA RDA 50
General considerations 50
Isolation of RNA 51
Generation of double-stranded cDNA 56
Preparation of representations 59
Preparation of driver and tester 63
Subtractive hybridization 66
Generation of a first difference product (DP1) 66
Generation of a second difference product (DP2) 68
5 Common problems with cDNA RDA 71
Low yield 71
High background 71
6 Screening of difference products 72
Primary screening 72
Secondary screening 75
7 Modifications to cDNA RDA 75
Competition 75
Combination of representations 77
Variable stringency 78
Increasing cDNA coverage 78
cDNA RDA in prokaryotes 79

5 Identification of differentially expressed genes by suppression subtractive hybridization *81*
Sejal Desai, Jason Hill, Stephanie Trelogan, Luda Diatchenko, and Paul D. Siebert

1 Introduction *81*
2 The principle of SSH *83*
3 Protocols *83*
Materials and reagents *83*
Preparation of the subtracted cDNA library *85*
Differential screening of the subtracted cDNA library *97*
4 Results *100*
Subtraction efficiency analysis *101*
Differential screening analysis *101*
Confirmation of differential expression *103*
Sequence analysis of differentially expressed clones *104*
5 Discussion *105*
Level of background and differential screening *105*
Sequence analysis of subtracted libraries *107*
Efficiency of enrichment by SSH *108*
Quality of the starting sample *108*
Complexity of the subtracted library *109*
Ratio of driver/tester and hybridization time *110*
Summary *110*
6 Conclusions *110*
Acknowledgments *111*

6 Gene expression analysis by cDNA microarrays *113*
Spyro Mousses, Michael L. Bittner, Yidong Chen, Ed R. Dougherty, Andreas Baxevanis, Paul S. Meltzer, and Jeffrey M. Trent

1 Introduction *113*
cDNA microarray technology *113*
cDNA microarray overview *114*
2 Preparation and printing of target DNA *115*
Target DNA considerations: source, type, and large-scale production *115*
Target DNA preparation *115*
Printing of DNA target microarrays on glass slides *119*
3 Labelling and hybridization of complex cDNA probes to arrayed targets *123*
RNA preparation *123*
Direct labelling of cDNA using fluorescent dyes *125*
Hybridization to glass DNA microarrays *127*
Critical parameters and troubleshooting *128*
4 Generation and analysis of image data *128*
The reader *128*
Image data generation and analysis *130*
5 Analysis of large-scale expression data *134*
6 Future directions *135*
Acknowledgements *136*

7 SADE: a microassay for serial analysis of gene expression *139*
Lydie Cheval, Bérangère Virlon, and Jean-Marc Elalouf

1 Introduction and overview *139*
High-throughput methods for quantitative analysis of gene expression 139
Protocol outline *139*
Differences between SAGE and SADE *140*
2 Tissue sampling and mRNA isolation *142*
Tissue sampling and lysis *142*
mRNA isolation *143*
mRNA integrity and purity *144*
3 First and second strand synthesis *144*
First strand cDNA synthesis *144*
Second strand synthesis 145
Yield of second strand synthesis *146*
4 Linkers design, preparation, and ligation *147*
Linkers design *147*
Linkers preparation *149*
Ligating linkers to cDNA *149*
5 Ditags formation *151*
Release of cDNA tags 151
Blunt ending of released cDNA tags *152*
6 PCR amplification *152*
PCR buffers and procedures *153*
Number of PCR cycles *153*
Purification and reamplification *155*
7 Ditag isolation, concatenation, and cloning of concatemers *155*
Ditag isolation *155*
Concatenation *156*
Purification of concatemers *157*
Cloning of concatemers 159
8 Data analysis *159*
Software 159
Library validity *160*
Number of tags to be sequenced *161*

8 Analysis of gene expression in single cells using three prime end amplification PCR 165
Tom C. Freeman, Alistair K. Dixon, Kevin Lee, and Peter J. Richardson

1 Introduction *165*
2 Cytoplasmic harvesting *167*
Collection of cytoplasm from fluorescence-activated cell sorter (FACS) sorted cells *167*
Isolation of neuronal cytoplasm from single neurons *169*
3 TPEA PCR *172*
Reverse transcription *172*
Second strand synthesis and TPEA PCR *173*
4 Gene-specific PCR 175

Practical considerations *175*
Primer design and testing *176*
5 Interpretation of results *178*

9 Analysis of gene expression by two-dimensional gel electrophoresis *181*
A. M. Tolkovsky
1 Introduction *181*
2 Basic methods for running 2-D gels *182*
Sample preparation *182*
Rehydration of IPG strips *183*
Running the first dimension *185*
Equilibration of IEF strip before running second dimension *187*
Running the second dimension vertical SDS-PAGE *189*
Drying the gels *189*
3 Special techniques for detection of differential gene expression *190*
Metabolic labelling *190*
Making a calibration strip for quantitation of [^{35}S]methionine-labelled spots *191*
Silver staining that is compatible with matrix-assisted laser desorption/ionization mass spectrometry and electrospray mass spectrometry *193*
4 Pattern analysis and spot assignment *194*
5 Some basic troubleshooting *194*

10 Proteome research: methods for protein characterization *197*
Ian Humphery-Smith and Malcolm A. Ward
1 Introduction *197*
2 Cleanliness *199*
Dust reduction hoods *199*
Filtering buffers and solutions to remove particulate matter and micro-organisms *200*
Aerosol prevention filters in micropipette tips *200*
Laminar flow hood *200*
3 Western blotting *201*
4 Edman protein microsequencing *204*
5 Amino acid composition *208*
6 Proteinase cleavage, sample concentration, clean-up, and preparation for mass spectrometry *210*
7 Mass spectrometry *218*
Hierarchical analysis *218*
Peptide mass fingerprinting *219*
MALDI-TOF MS *221*
Electrospray ionization mass spectrometry *227*
Tandem mass spectrometry *231*
Analysis of post-translational modifications *234*

A1 *List of suppliers* *243*

Index *248*
