● Engineering

# CHEMICAL ENGINEERS' PORTABLE HANDBOOK

- ▶ Compact & complete: the *chemical engineer's* on-the-job data source
- ▶ Features unique practice-oriented design
- ▶ Covers Process Operations Scale-UP & Environmental Operations

**Richard G. Griskey**

# CONTENTS

Preface.....	ix
<b>Chapter 1. Chemical Engineering Process Principles .....</b>	<b>1</b>
Introduction.....	1
Process Flow Sheets; Mass and Energy Balances .....	1
Process Scale-Up: Dimensionless Groups .....	6
Physical and Chemical Data .....	9
Viscosity and Density Data.....	10
Thermal Properties; Specific Heats; Thermal Conductivities; Prandtl Numbers .....	23
Diffusion Coefficients; Gases .....	34
Diffusion Coefficients; Liquids .....	37
Diffusion Coefficients; Polymeric Systems; Solids.....	42
<b>Chapter 2. Thermodynamics.....</b>	<b>49</b>
Introduction.....	49
Conservation of Energy—The First Law of Thermodynamics.....	50
The Second Law of Thermodynamics; Entropy .....	60
Thermodynamic Properties.....	61
Variable Compositions; Ideal and Nonideal Cases .....	65
Phase Equilibrium .....	66
Activities and Activity Coefficients .....	71
Solution Thermodynamics.....	75
<b>Chapter 3. Fluid Flow.....</b>	<b>81</b>
Introduction.....	81
Fluid Statics .....	82
Laminar, Transition, Turbulent Conduit Flow .....	82
Frictional Heating, Pressure Drop, Friction Factors.....	84
Effect of Fittings, Expansion, Contractions.....	86
Noncircular Conduits, Coils, Spirals.....	89
Two-Phase Flow—Liquids and Gases .....	90
Two-Phase Flow—Gases and Solids.....	94
Two-Phase Systems; Liquid and Solid.....	96
Flow Around Solid Objects .....	96
Flow Around Objects, Gas-Liquid Liquid-Liquid Systems .....	99
Flow through Porous Media .....	102

Non-Newtonian Flow.....	107
Agitation and Mixing .....	109
<b>Chapter 4. Heat Transfer.....</b>	<b>119</b>
Introduction and Modes of Heat Transfer .....	119
Steady-State Conduction.....	120
Steady-State Conduction with a Heat Source .....	121
Unsteady State Heat Transfer .....	122
Convection; The Heat Transfer Coefficient.....	125
Free or Natural Convection .....	127
Laminar Flow Heat Transfer in Conduits .....	130
Turbulent Flow Heat Transfer in Conduits .....	131
Heat Transfer with Flow over Objects.....	133
Heat Transfer for Beds of Solids .....	135
Heat Transfer in Agitated Systems .....	136
Heat Transfer in Non-Newtonian Systems .....	137
Heat Transfer with Phase Change.....	140
Radiation Heat Transfer.....	145
Heat Exchangers.....	157
<b>Chapter 5. Mass Transfer .....</b>	<b>171</b>
Mass Transfer Coefficients .....	172
Equilibrium Staged Operations .....	177
Binary Distillation; the McCabe-Thiele Method .....	178
Binary Distillation; Additional Cases; Enthalpy-Equilibrium Approach .....	183
Relative Volatility; Column Efficiencies.....	185
Extractive and Azeotropic Distillation .....	186
Multicomponent Distillation.....	188
Batch Distillations.....	190
Physical Column Design .....	192
Absorption in Plate Columns.....	197
Packed Absorption Columns .....	200
Efficiencies; Packed Column Parameters .....	205
Liquid Extraction .....	208
Leaching .....	217
Adsorption and Ion Exchange .....	222
Additional and Novel Separation Processes.....	234
Mechanical, Electrical, and Magnetic Separations .....	236
Filtration .....	236

Centrifugation .....	245
Sedimentation and Thickening.....	250
Cyclone Separators and Electrostatic Precipitators .....	254
Magnetic Separators; Screening.....	257
<b>Chapter 6. Chemical Reaction Kinetics; Catalysis; Reactor Design .....</b>	<b>263</b>
Introduction.....	263
Order; Mechanism; Stoichiometry; Temperature Effects.....	266
Determination of Reaction Order.....	267
Homogeneous, Isothermal Rate Equation .....	270
Nonisothermal Homogeneous Reactions.....	272
Homogeneous Catalyzed Reactions .....	273
Heterogeneous Uncatalyzed Reaction .....	274
Heterogeneous Catalyzed Reactions .....	280
Chemical Reactors; Design Approaches .....	285
Gas-Solid Reactors .....	292
Gas-Liquid Reactors .....	299
Chemical Reactor Scale-up .....	299
Chemical Kinetics Data .....	301
<b>Chapter 7. Process Control .....</b>	<b>303</b>
Introduction to Process Control .....	303
LaPlace Transforms; Transfer Functions .....	307
Process Dynamics Design Methods.....	308
Advanced Control Methods .....	314
Process Control Equipment Measuring Elements .....	315
Process Control Equipment; Control Elements.....	319
Computer Process Control.....	322
Systems Hardware and Software.....	323
Communications; Transmission, Telemetry.....	327
<b>Chapter 8. Process Economics .....</b>	<b>329</b>
Introduction.....	329
Depreciation.....	330
Economic Alternatives; Profitability Methods .....	331
Cost Indexes .....	333
Equipment Costs .....	334
Cost Capacity Data; Fluid Flow .....	335
Cost Capacity Data; Heat Transfers .....	341

Cost Data; Mass Transfer Equipment .....	349
Cost Capacity Data; Mechanical Separations .....	354
Cost Capacity Data; Reaction Units, Materials Handling, Wastewater Treatment .....	362
Capital Investing Estimating Techniques .....	369
Cost and Asset Accounting; Pricing Chemical Products .....	378
<b>Chapter 9. Biochemical Engineering; Environmental Chemical Engineering .....</b>	<b>385</b>
Introduction .....	385
Microorganisms; Characteristics; Uses .....	385
Enzymes .....	387
Enzyme Kinetics .....	389
Biochemical Reactor Systems .....	390
Recovery of Products .....	394
<b>II Environmental Chemical Engineering;</b>	
Waste Management .....	394
Introductory; Regulatory Aspects .....	394
Air Pollution Control .....	396
Water Pollution Control .....	399
Industrial Solid Waste Management .....	405
<b>Appendix .....</b>	<b>411</b>
<b>Index .....</b>	<b>413</b>
