

# Brewing Yeast Fermentation Performance

Edited by Katherine Smart

*b*

Blackwell  
Science

# Contents

<b>Preface</b>	<b>xix</b>
<b>KATHERINE SMART</b>	
<b>Part 1 Measuring Yeast Quality</b>	<b>1</b>
<b>1 From bright field to fluorescence and confocal microscopy</b>	<b>3</b>
<b>DAVID LLOYD and GWENDA DINSDALE</b>	
1.1 Introduction	3
1.2 Materials and methods	5
1.2.1 Materials	5
1.2.2 Procedure	6
1.3 Discussion	6
1.4 Conclusions	8
Acknowledgements	8
References	8
<b>2 Trehalose, glycogen and sterol</b>	<b>10</b>
<b>CHRIS BOULTON</b>	
2.1 Introduction	10
2.2 Materials and methods	12
2.2.1 Yeast samples	12
2.2.2 Laboratory fermentations	12
2.2.3 Analyses	12
2.2.4 Yeast oxygenation	12
2.3 Results and discussion	12
2.4 Conclusions	17
Acknowledgements	18
References	18
<b>3 Rapid mobilization of intracellular trehalose by fermentable sugars: a comparison of different strains</b>	<b>20</b>
<b>MIKKO REINMAN and JOHN LONDESBOROUGH</b>	
3.1 Introduction	20
3.2 Materials and methods	21
3.2.1 Yeast	21
3.2.2 Brewing fermentations	21
3.2.3 Model pitching experiments	21
3.2.4 Trehalose, glycerol, glycogen and enzyme assays	21
3.2.5 Interpretation of trehalase assays	21
3.2.6 Maltose permease	22

3.3	Results and discussion	22
3.3.1	Tall-tube fermentations	22
3.3.2	Model pitching experiments	24
3.4	Conclusions	25
	Acknowledgements	26
	References	26
<b>4</b>	<b>Relationship between cell deterioration and plasma membrane ATPase of <i>Saccharomyces cerevisiae</i></b>	<b>27</b>
	<b>TOSHIHIKO TAKEUCHI and TAKEO IMAI</b>	
4.1	Introduction	27
4.2	Materials and methods	27
4.2.1	Yeast strain	27
4.2.2	Fermentation performance	27
4.2.3	Acidification power test	28
4.2.4	Measurement of intracellular pH	28
4.2.5	Materials	28
4.3	Results and discussion	28
4.3.1	Correlation of the ICP value with fermentation performance	28
4.3.2	Comparison between the acidification power test and the ICP method	28
4.3.3	The medium length chain fatty acids and protease activity in beer and beer foam	29
4.4	Conclusion	32
	Acknowledgements	33
	References	33
<b>5</b>	<b>Review of metabolic activity tests and their ability to predict fermentation performance</b>	<b>34</b>
	<b>DIRK BENDIAK</b>	
5.1	Introduction	34
5.2	Metabolic activity tests	35
5.2.1	Monitoring energy levels	35
5.2.2	Measuring cellular components	36
5.2.3	Fermentation capacity testing	38
5.2.4	Cell surface measurements	40
5.2.5	Replication methods	40
5.2.6	Flow cytometry	41
5.2.7	Yeast capacitance	41
5.2.8	Other stress indicator measurements	41
5.3	Conclusions	43
	Acknowledgements	43
	References	44

<b>6</b>	<b>Predicting fermentation performance using proton efflux</b>	<b>46</b>
	<b>RUKHSANA SIDDIQUE and KATHERINE SMART</b>	
6.1	Introduction	46
6.2	Aims of the investigation	47
6.3	Materials and methods	47
6.3.1	Yeast strains and growth conditions	47
6.3.2	Yeast cell population status	47
6.3.3	Acidification power test	47
6.4	Results and discussion	48
6.4.1	Does acidification power indicate yeast viability?	48
6.4.2	Does acidification power indicate yeast vitality?	49
6.4.3	What controls should the acidification power test include?	51
6.5	Conclusions	53
	Acknowledgement	53
	References	53
<b>7</b>	<b>Recent developments in on- and off-line yeast measurement using radiofrequency impedance methods</b>	<b>55</b>
	<b>ROBERT TODD</b>	
7.1	Introduction	55
7.2	Limitations of the current technology and planned improvements	56
7.2.1	Low concentration measurements	56
7.2.2	In-fermenter measurements	59
7.2.3	Viability	61
7.3	New low concentration measurement method	61
7.4	Yeast condition monitoring	63
7.5	Conclusions	65
	Acknowledgements	65
