Biochemistry Ilustrate

Peter N. Campbell Anthony D. Smith

CHURCHILL LIVINGSTONE

Contents

No. The cellular basis of biochemistry Types of living cells 2 The structure of prokaryotic and eukaryotic cells 2 Endocytosis and exocytosis through the plasma membrane 2 The nucleus 2 Mitochondria Lysosomes 3 **Peroxisomes** The endoplasmic reticulum The cytoskeleton Subcellular fractionation The microsome fraction Marker enzymes Metabolic functions of organelles An introduction to proteins and peptides The role of amino acids in the cell 8 Structure of amino acids **Asymmetry** in biochemistry lonic properties of amino acids Peptide structure and the peptide bond 10 ionic properties of peptides 11 Purification of proteins and determination of relative molecular mass Methods for the determination of the amino acid sequence of proteins 13 Protein structural hierarchies Protein denaturation and renaturation 15 Peptides, structure and biological activity 16 Nucleic acids and protein synthesis Introduction: Replication, transcription and translation 18 Nucleic acid structure and synthesis 18

Biosynthesis of proteins: translation
