

TRANSPORT PHENOMENA FUNDAMENTALS

Joel L. Plawsky

Contents

Preface	v
Chapter 1	1
1.1	1
1.2	1
1.3	7
1.4	9
1.5	11
1.6	16
1.6.1	18
1.7	22
1.8	27
1.9	29
Problems	29
Chapter 2	33
2.1	33
2.2	34
2.3	38
2.4	41
2.5	43
2.6	46
2.7	50
2.8	51
2.9	61
2.10	65
2.10.1	65
2.10.2	66
2.10.3	69
2.10.4	72
2.11	74
2.12	80
2.12.1	80
2.12.2	82
2.13	82
2.14	83
Problems	84

Chapter 3	Transport Properties of Materials	93
3.1	Introduction	93
3.2	Viscosity of Gases	94
	3.2.1 Kinetic Theory Development	94
	3.2.2 Kinetic Theory and the Viscosity of a Gas	99
	3.2.3 Chapman-Enskog Theory and Gas Viscosity	103
3.3	Viscosity of Liquids – Free Volume Theory	107
3.4	Thermal Conductivity of Gases	110
	3.4.1 Kinetic Theory	111
	3.4.2 Chapman-Enskog Theory	113
3.5	Thermal Conductivity of Liquids	115
3.6	Thermal Conductivity of Solids	116
	3.6.1 Dielectric Materials	117
	3.6.2 Metallic Solids	117
3.7	Diffusivity of Gases	119
	3.7.1 Kinetic Theory Derivation	119
	3.7.2 Chapman-Enskog Theory	122
3.8	Diffusivity of Liquids	124
3.9	Diffusion in Solids	130
3.10	Conductivity, Mobility and Resistivity	132
	3.10.1 Ionic Mobility and the Conductivity of Solutions	133
	3.10.2 Charge Mobility, Conductivity, and Resistivity in Solids	139
3.11	Summary	143
3.12	References	143
	Problems	144
Chapter 4	One-Dimensional, Steady-State, Diffusive Transport	149
4.1	Introduction	149
4.2	Boundary Conditions	150
	4.2.1 Convection Preview	150
	4.2.2 Equilibrium Relations and Mass Transfer Coefficients	153
	4.2.3 Overall Mass Transfer Coefficients	155
	4.2.4 Radiation Preview	157
4.3	Boundary Condition Catalog	159
4.4	One-Dimensional, Steady-State Diffusive Transport	161
	4.4.1 Momentum Transport – Fluid Flow	161
	4.4.2 Energy Transport – Heat Transfer	164
	4.4.3 Electric Conduction	168
	4.4.4 Mass Transport	171
4.5	Composite Media	175

4.5.1	Planar Systems	175
4.5.2	Cylindrical Systems	188
4.5.3	Spherical Systems	192
4.6	Variable Transport Properties, Coupled Transport, and Multiple Fluxes	196
4.6.1	Composition Dependent Diffusivity	196
4.6.2	Forced Ionic Diffusion	199
4.7	Summary	203
	Problems	204
Chapter 5	Generation	213
5.1	Introduction	213
5.1.1	Generation in Transport Processes	213
5.2	Generation on the Boundary -- boundary conditions	215
5.2.1	Momentum Transport	215
5.2.2	Energy Transport	216
5.2.3	Mass Transport	217
5.2.4	Charge Transport	218
5.2.5	Electrostatic and Magnetostatic Fields	219
5.3	One-Dimensional Transport with Generation at the Boundary	219
5.3.1	Diffusion with Heterogeneous Reaction	219
5.3.2	Heat Transfer with Evaporation	221
5.4	Constant Generation Terms	225
5.4.1	Momentum Transport -- flow between inclined plates	225
5.4.2	Energy Transport -- Joule heating inside an insulated wire	231
5.4.3	Electric Displacement -- a sphere with uniform charge distribution	235
5.5	Variable Generation and Coupled Transport	238
5.5.1	Simultaneous Diffusion and Reaction	238
5.5.2	Simultaneous Heat and Momentum Transport -- natural convection	246
5.5.3	Diffusion and Recombination in a Semiconductor	253
5.6	Summary	257
	Problems	258
Chapter 6	Accumulation	267
6.1	Introduction	267
6.2	Lumped Capacitance	268
6.2.1	Charge Transport -- charge decay in a conductor	268
6.2.2	Energy Transport -- cooling of a rivet	273
6.2.3	Mass Transport -- leaching of a pellet	278

6.3	Internal Gradients and Generalized Solutions	284
6.3.1	Graphical Solutions – Heisler Charts	284
6.3.2	Analytic Solutions for Transient Problems with No Convection	300
6.3.2.1	Diffusion and Reaction in a Cylinder	301
6.3.2.2	Startup of Natural Convection Between Parallel Plates	310
6.4	Semi-Infinite Systems	316
6.4.1	Fluid Flow Next to a Plate Suddenly Set Into Motion	317
6.4.2	Heat Transfer Analogs	323
6.4.3	Mass Transfer Analogs	326
6.5	Miscellaneous Transient Example Problems	330
6.5.1	Transient Evaporation Through a Stagnant Vapor	330
6.5.2	Transient Absorption with Instantaneous Reaction	335
6.5.3	Melting and Solidification	339
6.5.4	Periodic Flow in a Rotating Cylindrical System	344
6.6	Summary	349
6.7	References	350
	Problems	350
Chapter 7 Conservative Transport and Waves		363
7.1	Introduction	363
7.2	Momentum Transport	364
7.2.1	Water/Tidal Waves	364
7.2.2	Acoustic Waves	377
7.3	Charge Transport – Electromagnetic Waves	385
7.3.1	Ampere's Law	385
7.3.2	Faraday's law	385
7.3.3	Maxwell's Equations – dielectric media	387
7.3.4	Maxwell's Equations – conducting media	389
7.4	Summary	390
7.5	References	391
	Problems	391
Chapter 8 Transport Enhancement Using Extended Surfaces		397
8.1	Introduction	397
8.2	Heat Transfer - Finned Surfaces	398
8.2.1	Rectangular Fins – constant cross-sectional area	398
8.2.2	Cylindrical Fins – constant cross-sectional area	406
8.3	Mass Transfer - Gills, Lungs, etc.	410

8.3.1	Transient Response	415
8.4	Diffusion and Reaction in a Catalyst Pellet	418
8.4.1	External Mass Transfer Resistance	425
8.4.2	Thermal Effects	428
8.5	Summary	435
8.6	References	435
	Problems	435
Chapter 9 Multidimensional Effects, Potential Functions, and Fields		445
9.1	Introduction	445
9.2	Laplace's Equation and Fields	446
9.2.1	Revisiting the Fin Problem	447
9.2.2	Scalar and Vector Fields	453
9.3	Solutions of Laplace's Equation	455
9.3.1	Cylindrical Coordinates – heat conduction	456
9.3.2	Spherical Coordinates – heat transfer in a hemisphere	460
9.3.3	Laplace Equation Solutions Using Complex Variables	464
9.4	Generation, Sources, Sinks, and Poisson's Equation	473
9.4.1	Sources, Sinks, and Generation on the Boundary	473
9.4.2	Poisson's Equation and Generation	478
9.4.3	Generation a Function of the Dependent Variable	485
9.5	Transient Systems	490
9.6	Summary	494
9.7	References	494
	Problems	495
Chapter 10 Convective Transport: Microscopic Balances		503
10.1	Introduction	503
10.2	Momentum Transport	504
10.2.1	Continuity	504
10.2.2	Momentum Balance	508
10.2.3	Mechanical Energy Balance	526
10.2.4	Vorticity Equation	529
10.3	Energy Transport	538
10.4	Mass Transport	552
10.5	Charge Transport	563
10.6	Summary	572
10.7	References	572

Problems	573
Chapter 11 Macroscopic or Engineering Balances	585
11.1 Introduction	585
11.2 Macroscopic Continuity Equation	585
11.3 Macroscopic Momentum Balance	589
11.4 Macroscopic Mechanical Energy Balance – extended Bernoulli's Equation	595
11.5 Macroscopic Energy Balance	607
11.6 Macroscopic Species Continuity Equation	624
11.7 Macroscopic Charged Species Continuity Equation	636
11.8 Summary	640
11.9 References	641
Problems	641
Chapter 12 Convective Transport on a Flat Plate	651
12.1 Introduction	651
12.2 Convective Transport Coefficients c_f , h , k_c , k_{\pm}	651
12.3 Boundary Layer Definitions	655
12.4 Derivation of the Boundary Layer Equations	659
12.5 Transport Analogies	669
12.5.1 Reynolds Analogy	670
12.5.2 Chilton-Colburn Analogy and Others	671
12.6 Hydrodynamic Boundary Layers	673
12.6.1 Forced Convection, Laminar Flow	674
12.6.2 Magnetohydrodynamic Flow	681
12.7 Thermal Boundary Layers	684
12.7.1 Forced Convection, Laminar Flow	685
12.7.2 Free Convection on a Vertical Plate	694
12.7.3 Film Condensation on a Vertical Plate	702
12.8 Mass Transfer Boundary Layers	708
12.8.1 Effects of Mass Transfer Rate	713
12.8.2 Effect of Chemical Reaction	718
12.9 Simplified Ionic Boundary Layers	722
12.10 Summary	725
12.11 References	726
Problems	727
Chapter 13 Convective Transport: Systems with Curvature	735
13.1 Introduction	735
13.2 Flow Over Cylinders	735

Contents		xiii
13.3	Flow Over Spheres	748
13.4	Velocity Profiles in Tubes	757
13.5	Heat and Mass Transfer Applications	763
	13.5.1 Temperature/Concentration Profiles and Heat/Mass Transfer Coefficients	768
	13.5.1.1 Steady-State – constant surface heat flux	768
	13.5.1.2 Steady-State – constant surface temperature	770
	13.5.1.3 Developing Profiles	771
13.6	Taylor Dispersion	781
	13.6.1 Effect of Molecular Diffusion on Dispersion	782
13.7	Summary	791
13.8	References	791
	Problems	793
Chapter 14	Turbulent Boundary Layers	801
14.1	Introduction	801
14.2	Turbulent Boundary Layer Structure	802
14.3	Transport Equations in Turbulent Flow	804
	14.3.1 Continuity and Momentum Equations	807
	14.3.2 Energy and Species Continuity Equations	809
14.4	Representing the Reynolds Flux Components	810
	14.4.1 Boussinesq Theory	810
	14.4.2 Prandtl Mixing Length	812
	14.4.3 Von Karman Similarity Assumption	818
	14.4.4 Other Mixing Length-type Descriptions	819
14.5	Friction Factors and Other Transport Coefficients	821
	14.5.1 Friction Factors	821
	14.5.2 Heat Transfer Coefficients	828
	14.5.3 Mass Transfer Coefficients	833
14.6	Summary	837
14.7	References	837
	Problems	838
Chapter 15	Radiative Transport	843
15.1	Introduction	843
15.2	Preliminary Definitions	843
15.3	Maxwell's Equations and Heat Transfer	845
15.4	Energy Fluxes in Radiative Systems	850
	15.4.1 Incident Radiation – Irradiation	850
	15.4.2 Emitted Radiation – Radiosity	854
15.5	The Blackbody	855
	15.5.1 Emissive Power of a Blackbody	856

15.6	The Graybody	864
	15.6.1 Kirchhoff's Law	867
15.7	View Factors	871
	15.7.1 The View Factor Integral	871
	15.7.2 Relations Between View Factors	873
15.8	Radiative Energy Exchange	877
	15.8.1 Radiative Heat Transfer Between Blackbodies	878
	15.8.2 Radiative Heat Transfer Between Graybodies	880
	15.8.3 Radiation Shields	884
	15.8.4 Radiative Heat Transfer in Three Surface Enclosures	889
15.9	Summary	893
15.10	References	893
	Problems	894
Nomenclature		901
Appendix A Vector Mathematics		910
Appendix B Mathematical Functions		914
Appendix C Exact Solution to the Boundary Layer Equations		916
Appendix D Thermal and Transport Properties of Materials		919
Index		939
