

The background of the cover features several faint, white chemical structures. At the top, there are two structures: one is a complex polyphenol with multiple hydroxyl groups and a central oxygen atom, and the other is a smaller molecule with a carboxylic acid group and hydroxyl groups. In the center, there is a large, detailed chemical structure of a flavonoid, specifically a flavan-3-ol, showing a central oxygen atom, a carbonyl group, and multiple hydroxyl groups on the rings. To the right, there is a diagram of a cell with a nucleus and various organelles. At the bottom, there are more chemical structures, including a complex polycyclic aromatic hydrocarbon and a smaller molecule with a carboxylic acid group and hydroxyl groups.

# Biomolecular Free Radical Toxicity: Causes and Prevention

Preface	ix
<b>MACROMOLECULAR MECHANISMS OF INJURY AND THE ROLE OF ANTIOXIDANTS</b>	<b>1</b>
<b>1 Membrane Lipid and Lipoprotein Injury: Prevention by Antioxidants</b>	<b>3</b>
<i>Helen Wiseman and Tim Ridgway</i>	
Membrane structural and functional features	3
Oxidative biomolecular injury to membrane lipids	4
Membrane fatty acids in oxidative biomolecular injury	6
Prevention of oxidative biomolecular injury by antioxidants in the diet	7
Dietary modulation of membrane fluidity and of enzyme and receptor activity	22
Dietary modulation of membranes in disease treatment and prevention?	24
Lipoprotein particle injury in atherogenesis	29
Future prospects for antioxidant protection against membrane lipid and lipoprotein injury and for dietary modulation of membrane function in disease prevention	35
References	36
<b>2. DNA Injury: Prevention by Antioxidants</b>	<b>47</b>
<i>Richard J. Hambly</i>	
Oxidative DNA damage	47
Endogenous cellular antioxidant defences	50
Oxidative DNA damage and cancer	51
Dietary antioxidants	53
Specific antioxidants	55
Vitamins	58
References	63

<b>3. Protein Injury: Prevention by Antioxidants</b>	73
<i>Barbara R. Evans and Jonathan Woodward</i>	
Oxidative damage to proteins: causes and mechanism	73
Antioxidants and their application	80
Two case studies of effects of oxidants	88
References	92
<b>GENE EXPRESSION AND CELL MEDIATED MECHANISMS OF TOXICITY EXPRESSION</b>	101
<b>4. Xenobiotic Metabolism and Bioactivation by Cytochromes P-450</b>	103
<i>Costas Ioannides</i>	
Metabolism of xenobiotics	104
Bioactivation of xenobiotics	104
Chemical carcinogenesis	111
Cytochromes P-450	113
Induction and inhibition of cytochromes P-450	116
Genetic polymorphism in cytochrome P-450 expression	119
Cytochrome P-450-dependent metabolism of drugs and bioactivation of chemical carcinogens	119
Cytochrome P-450 induction and chemical carcinogenesis: the Ah receptor	131
Conclusions	134
References	135
<b>5. Apoptosis Triggered by Free Radicals: Role in Human Diseases</b>	145
<i>George E. N. Kass, Sek C. Chow and Sten Orrenius</i>	
Introduction	145
Cell death in tissues: apoptosis and programmed cell death	146
Apoptosis: morphological and biochemical considerations	148
Free radicals and apoptosis	150
Free radicals and cell death: apoptosis versus necrosis	152
Mechanisms of free radical-induced apoptosis	153
Mitochondria as molecular convergence point for free radical-induced cell death: apoptosis versus necrosis	156
Caspases as targets for free radicals in necrosis	158
Conclusions and perspectives	159
References	160

CONTENTS	vii
<b>HUMAN AND ENVIRONMENTAL HEALTH EFFECTS</b>	<b>169</b>
<b>6. Dietary Phytoestrogens, Oestrogens and Tamoxifen: Mechanisms of Action in Modulation of Breast Cancer Risk and Prevention of Heart Disease</b>	<b>171</b>
<i>Helen Wiseman</i>	
Dietary phytoestrogens, oestrogens and tamoxifen: role in modulation of breast cancer risk and in heart disease prevention	171
Oestrogens and risk of breast cancer	172
Oestrogens in cardioprotection	176
The anticancer drug tamoxifen	177
Tamoxifen metabolism in humans	179
Tamoxifen as a protective agent against heart disease	180
Dietary phytoestrogens	185
Dietary sources, metabolism and bioactivity of isoflavone and lignan phytoestrogens	185
Health protection by phytoestrogens	190
Protection by phytoestrogens against cardiovascular disease and osteoporosis	195
Phytoestrogens: the dangers versus future dietary benefits and use in nutraceutical supplements	197
References	199
<b>7. Strategies for the Removal of Ecotoxicants: Environmental Oestrogens and Oestrogen-Mimics</b>	<b>209</b>
<i>Tim Ridgway and Helen Wiseman</i>	
Oestrogen mimicry in the environment	209
Development of replacement materials for xenoestrogen avoidance	214
Activated-carbon filtration of water in the removal of environmental oestrogens and oestrogen-mimics	215
Use of charged suspended-particles to remove environmental oestrogens and oestrogen-mimics	215
Chemical catalysis for the removal of environmental oestrogens and oestrogen-mimics	216
Use of enzymic catalysis in the removal of environmental oestrogens and oestrogen-mimics	217
Microbial bioremediation of environmental oestrogens and oestrogen-mimics	222

The use of plants for bioremediation of environmental oestrogens and oestrogen-mimics	223
A healthy biosphere: progress towards 'Techno-Gaia'	224
Biomonitoring of environmental oestrogens and oestrogen-mimics: leading to ecorestoration?	225
Prediction of oestrogen-mimicry by biomolecular modelling techniques	225
Conclusions on ecorestoration after biomonitoring of environmental oestrogens and oestrogen-mimics	227
