

**PHYSICS  
FOR  
RADIATION  
PROTECTION**

**James E. Martin**

# CONTENTS

<b>Preface</b>	<b>xvii</b>
<b>1 Introductory Concepts</b>	<b>1</b>
Structure of Atoms, 2	
Two-Proton Atoms, 5	
Three-Proton Atoms, 7	
Atom Dimensions, 7	
Nuclide Chart, 7	
Atom Measures: Number, Mass, and Energy, 9	
Avogadro's Number, 10	
Atomic Mass Unit, 10	
Electron Volt, 11	
Problems, 14	
<b>2 Forces and Energy in Atoms</b>	<b>15</b>
Basic Energy Concepts, 17	
Potential and Kinetic Energy in Atoms, 20	
Relativistic Energy, 21	
Variation of Mass with Velocity, 22	
Relativistic Mechanics, 23	
Momentum and Energy, 23	
Effects of Velocity, 24	
Natural Limit, 24	
Mass-Energy, 26	
Binding Energy of Nuclei, 26	
<i>Q</i> -Value, 29	
Summary, 29	
Problems, 30	

<b>3 Major Discoveries in Radiation Physics</b>	<b>32</b>
Great Discoveries from Simple Tools, 33	
Discovery of X Rays, 34	
Discovery of Radioactivity, 35	
Discovery of the Electron, 37	
Measuring an Electron's Charge, 38	
First Concept of the Atom, 39	
Theory of Electromagnetic Radiation: The Quantum, 42	
Wein's Law, 43	
Rayleigh-Jeans Law, 44	
Planck's Quantum Theory of Radiation, 45	
Quantum Theory and the Photoelectric Effect, 47	
Electromagnetic Spectrum, 50	
Photon Hypothesis, 51	
Compton Effect, 51	
Discovery of the Atom's Structure, 55	
Rutherford's Alpha-Scattering Experiments, 56	
Bohr Model of the Atom, 58	
Emission and Absorption Spectra, 59	
Wave Mechanics: A Necessary Theory, 63	
De Broglie Waves, 64	
Confirmation of De Broglie's Hypothesis, 64	
De Broglie Waves and the Bohr Model, 67	
Wave Mechanics, 68	
Exclusion Principle, 70	
Uncertainty Principle, 71	
Atom Systems, 73	
The Neutron, 73	
Nuclear Shell Model, 74	
Summary, 74	
Problems, 77	
<b>4 Interactions</b>	<b>79</b>
Production of X Rays, 79	
Characteristic X Rays, 81	
X Rays and Atomic Structure, 83	
Auger Electrons, 84	
Nuclear Interactions, 86	
Dynamics of Nuclear Interactions, 87	
Cross Section, 88	
<i>Q</i> -Value, 90	
Alpha-Particle Interactions, 92	
Alpha-Neutron Reactions, 93	
Transmutation by Protons, 94	
Proton-Neutron Reactions, 95	
Proton-Gamma Reactions, 96	
Proton-Deuteron Reactions, 96	

Transmutation by Deuterons, 96	
Deuteron-Proton and Deuteron-Neutron Reactions, 97	
Neutron Interactions, 97	
Neutron-Alpha Reactions, 98	
Neutron-Proton Reactions, 98	
Neutron-Neutron Reactions, 98	
Radiative Capture Reactions, 99	
Photodisintegration Reactions, 99	
Medical Isotope Reactions, 100	
Transuranium Elements, 101	
Fission and Fusion Reactions, 102	
Fusion, 103	
Thermonuclear Weapons, 106	
Summary, 107	
Problems, 108	

## 5 Radioactive Transformation

110

Processes of Radioactive Transformation, 110	
Transformation of Neutron-Rich Radioactive Nuclei, 112	
Double-Beta Transformation, 115	
Transformation of Proton-Rich Nuclei, 116	
Positron Emission, 116	
Average Energy of Negatron and Positron Emitters, 119	
Electron Capture, 120	
Radioactive Transformation of Heavy Nuclei by Particle Emission, 122	
Theory of Alpha-Particle Transformation, 126	
Transuranic Radionuclides, 127	
Gamma Emission, 127	
Internal Transition: Metastable or Isomeric States, 129	
Internal Conversion, 129	
Multiple Modes of Radioactive Transformation, 135	
Transformation by Delayed Neutron Emission, 136	
Transformation by Spontaneous Fission, 136	
Proton Emission, 138	
Decay Schemes, 139	
Rate of Radioactive Transformation, 141	
Activity of a Radioactive Source, 143	
Units of Radioactive Transformation, 143	
Mathematics of Radioactive Transformation, 145	
Half-Life, 146	
Mean Life, 148	
Effective Half-Life, 149	
Radioactivity Calculations, 150	
Half-Life Determination, 153	
Activity-Mass Relationships, 154	
Specific Activity, 155	

Radioactive Series Transformation, 158	
Series Decay Calculations, 158	
Recursive Kinetics: Bateman Equations, 160	
Radioactive Equilibrium, 161	
Time of Maximum Activity, 162	
Secular Equilibrium, 163	
Transient Equilibrium, 164	
Radionuclide Generators, 165	
Transient Equilibrium: Branching, 166	
Total Number of Transformations, 167	
Discovery of the Neutrino, 169	
Problems, 171	
<b>6 Naturally Occurring Radiation and Radioactivity</b>	<b>174</b>
Discovery and Interpretation of Radioactivity, 175	
Background Radiation, 177	
Cosmic Radiation, 178	
Cosmogenic Radionuclides, 180	
Naturally Radioactive Series, 183	
Singly Occurring Primordial Radionuclides, 193	
Radioactive Ores and By-products, 195	
Resource Recovery, 195	
Uranium Ores, 196	
Water Treatment Sludge, 197	
Phosphate Industry Wastes, 197	
Elemental Phosphorus, 198	
Neptunium Series Radionuclides, 199	
Manhattan Project Wastes, 199	
Thorium Ores, 201	
Radioactivity Dating, 201	
Carbon Dating, 201	
Dating by Primordial Radionuclides, 202	
Potassium-Argon Dating, 203	
Ionium ( $^{230}\text{Th}$ ) Method, 204	
Lead-210 Dating of Sediments, 204	
Radon and its Progeny, 205	
Radon Subseries, 206	
Working Level for Radon Progeny, 208	
Measurement of Radon, 212	
Summary, 216	
Problems, 217	
<b>7 Interactions of Radiation with Matter</b>	<b>220</b>
Radiation Dose and Units, 220	
Radiation Absorbed Dose, 221	
Radiation Dose Equivalent, 221	
Radiation Exposure, 222	

- Radiation Dose Calculations, 223
  - Inverse-Square Law, 224
- Interaction Processes, 225
- Interactions of Alpha Particles and Heavy Nuclei, 226
  - Recoil Nuclei and Fission Fragments, 228
  - Range of Alpha Particles, 228
- Beta Particle Interactions and Dose, 231
  - Energy Loss by Ionization, 231
  - Energy Loss by Bremsstrahlung, 232
  - Cerenkov Radiation, 233
  - Attenuation of Beta Particles, 234
  - Radiation Dose from Beta Particles, 237
  - Beta Dose from Contaminated Surfaces, 239
  - Beta Contamination on Skin or Clothing, 240
  - Beta Dose from Hot Particles, 241
- Photon Interactions, 243
  - Photoelectric Interactions, 243
  - Compton Interactions, 244
  - Pair Production, 246
  - Photodisintegration, 248
- Photon Attenuation and Absorption, 248
  - Attenuation ( $\mu$ ) and Energy Absorption ( $\mu_{en}$ ) Coefficients, 251
  - Effect of  $E$  and  $Z$  on Photon Attenuation and Absorption, 253
  - Absorption Edges, 253
- Energy Transfer and Absorption by Photons, 258
  - Electronic Equilibrium, 262
  - Bragg-Gray Theory, 263
- Exposure and Dose Calculations, 264
  - Point Sources, 265
  - Gamma-Ray Constant, 266
  - Exposure and Absorbed Dose, 267
  - Exposure, Kerma, and Absorbed Dose, 268
- Summary, 270
- Problems, 271

## 8 Radiation Shielding

273

- Shielding of Alpha-Particle Sources, 273
- Shielding of Beta-Particle Sources, 274
  - Attenuation of Beta Particles, 274
  - Bremsstrahlung Effects for Beta Shielding, 276
- Shielding of Photon Sources, 279
  - Shielding of Good Geometry Photon Sources, 280
  - Half- and Tenth-Value Layers, 284
  - Shielding of Poor Geometry Photon Sources, 286
  - Use of Buildup Factors, 290
  - Effect of Buildup on Shield Thickness, 291
  - Mathematical Formulations of the Buildup Factor, 293

Gamma Flux for Distributed Sources, 295	
Line Sources, 296	
Ring Sources, 298	
Disc and Planar Sources, 299	
Shield Designs for Area Sources, 300	
Gamma Exposure from Thick Slabs, 306	
Volume Sources, 309	
Buildup Factors for Layered Absorbers, 311	
Shielding of Protons and Light Ions, 313	
Summary, 315	
Problems, 316	
<b>9 Production of Activation Products</b>	<b>319</b>
Activation Cross Sections, 319	
Neutron Reactions, 319	
Activation Products in Nuclear Reactors, 321	
Activation Product Calculations, 323	
Charged Particle Activation, 329	
Activation by Photons, 337	
Summary, 339	
Problems, 340	
<b>10 Nuclear Fission and its Products</b>	<b>342</b>
Fission Energy, 343	
Physics of Sustained Nuclear Fission, 346	
Neutron Economy and Reactivity, 350	
Nuclear Power Reactors, 352	
Reactor Design: Basic Systems, 353	
Light Water Reactors, 355	
Pressurized Water Reactors, 355	
Boiling Water Reactors, 356	
Inherent Safety Features of LWRs, 358	
Decay Heat in Power Reactors, 359	
Uranium Enrichment, 359	
Heavy Water Reactors, 361	
HWR Safety Systems, 364	
Breeder Reactors, 364	
Liquid Metal Fast Breeder Reactors, 366	
Gas-Cooled Reactors, 368	
High-Temperature Gas Reactors, 368	
Reactor Radioactivity, 370	
Fuel Cladding, 370	
Radioactive Products of Fission, 372	
Production of Individual Fission Products, 375	
Fission Products in Spent Fuel, 377	
Fission Product Poisons, 378	

Radioactive Wastes from Reactors, 381	
Low-Level Radioactive Waste, 381	
Summary, 384	
Problems, 385	
<b>11 Nuclear Criticality</b>	<b>387</b>
Nuclear Reactors and Criticality, 388	
"Natural Reactor" Criticality Event, 388	
Three Mile Island Accident, 388	
Chernobyl Accident, 390	
NRX Reactor Accident, 392	
SL-1 Accident, 393	
K-Reactor Event, 393	
Special Reactor Experiments, 394	
Nuclear Explosions, 395	
Fusion Weapons, 395	
Fission Products from Nuclear Explosions, 397	
Fission Product Activity and Exposure, 398	
Criticality Accidents, 400	
Y-12 Plant, Oak Ridge National Laboratory, 400	
Los Alamos Scientific Laboratory, 401	
Idaho Chemical Processing Plant, 401	
Hanford Recuplex Plant, 402	
Wood River Junction, 403	
UKAEA Windscale Works, 403	
Bare and Reflected Metal Assemblies, 404	
Radiation Exposures in Criticality Events, 404	
Criticality Safety, 405	
Criticality Safety Parameters, 406	
Fission Product Release in Criticality Events, 411	
Fast Fission in Criticality Events, 412	
Summary, 414	
Problems, 415	
<b>12 Radiation Detection and Measurement</b>	<b>416</b>
Types of Detectors, 416	
Gas-Filled Detectors, 416	
Crystalline Detectors and Spectrometers, 419	
Semiconducting Detectors, 420	
Gamma Spectroscopy, 421	
Gamma-Ray Spectra: $h\nu \leq 1.022$ MeV, 421	
Gamma-Ray Spectra: $h\nu \geq 1.022$ MeV, 426	
Escape Peaks and Sum Peaks, 427	
Gamma Spectroscopy of Positron Emitters, 429	
Portable Field Instruments, 430	
Geiger Counters, 430	
Ion Chambers, 431	

Microrem Meters, 432	
Alpha Radiation Monitors, 432	
Survey Instruments for Beta Particles, 433	
Removable Radioactive Surface Contamination, 434	
Instrument Calibration, 434	
Personnel Dosimeters, 435	
Laboratory Instruments, 436	
Liquid Scintillation Analyzers, 436	
Proportional Counters, 440	
End-Window GM Counters, 442	
Surface Barrier Detectors, 443	
Range versus Energy of Beta Particles, 443	
Problems, 447	
<b>13 Statistics in Radiation Physics</b>	<b>449</b>
Nature of Counting Distributions, 449	
Binomial Distribution, 450	
Poisson Distribution, 451	
Normal Distribution, 452	
<i>Mean and Standard Deviation of a Set of Measurements</i> , 455	
Uncertainty in the Activity of a Radioactive Source, 456	
Uncertainty in a Single Measurement, 458	
Propagation of Error, 458	
Statistical Subtraction of a Background Count or Count Rate, 460	
Error Propagation of Several Uncertain Parameters, 462	
Comparison of Data Sets, 463	
Statistics for the Counting Laboratory, 465	
Uncertainty of a Radioactivity Measurement, 465	
Determining a Count Time, 467	
Efficient Distribution of Counting Time, 468	
Detection and Uncertainty for Gamma Spectroscopy, 468	
<i>Testing the Distribution of a Series of Counts: Chi-Square Statistic</i> , 471	
Weighted Sample Mean, 472	
Rejection of Data, 473	
Levels of Detection, 475	
Critical Level, 475	
Detection Limit or Lower Level of Detection, 478	
Minimum Detectable Concentration or Contamination, 481	
Less-Than Level, 484	
Interpretations and Restrictions, 484	
Uncertainties in Response Time/Dead Time, 485	
Problems, 486	
<b>14 Neutrons</b>	<b>488</b>
Neutron Sources, 488	
Neutron Parameters, 490	

- Neutron Interactions, 491
  - Neutron Attenuation and Absorption, 493
- Neutron Dosimetry*, 495
  - Dosimetry for Fast Neutrons, 495
  - Dose from Thermal Neutrons, 499
  - Monte Carlo Calculations of Neutron Dose, 501
  - Kerma for Neutrons, 503
  - Dose Equivalent versus Neutron Flux, 503
  - Boron Neutron Capture Therapy, 504
- Neutron Shielding, 505
  - Neutron Shielding Materials, 506
  - Neutron Shielding Calculations, 507
  - Neutron Removal Coefficients, 508
  - Neutron Attenuation in Concrete, 511
- Neutron Detection, 512
  - Measurement of Thermal Neutrons, 512
  - Measurement of Intermediate and Fast Neutrons, 513
  - Neutron Foils, 515
  - Albedo Dosimeters, 517
  - Flux Depression of Neutrons, 517
- Summary, 518
- Problems, 519

## 15 X Rays

521

- Producing and Shaping the X-Ray Beam, 522
  - X-Ray Yield: Bremsstrahlung Production Fraction, 525
  - X-Ray Tubes, 527
  - Focal Spot, 529
  - Rotating Anodes, 531
  - Equipment Techniques, 532
  - Intensity of X-Ray Beams, 533
  - X-Ray Filters, 536
- X-Ray Image Formation, 540
  - X-Ray Imaging Dosimetry, 542
- Capture of the X-Ray Image, 545
  - Air Gaps and Grids, 545
  - X-Ray Film and Screen Systems, 549
- Image Processing, 551
  - Optimization of Film Processing, 555
- Radiation Protection for X-Rays, 558
  - Assuring Patient Protection in X-Ray Diagnosis, 558
  - Radiation Exposure from X Rays, 559
  - Good Practice, 564
- X-Ray Shielding, 566
  - Shielding Calculations, 566

Summary, 572	
Problems, 574	
<b>Appendix A</b> Constants of Nature and Selected Particle Masses	<b>575</b>
<b>Appendix B</b> Atomic Masses and Binding Energies for Selected Isotopes of the Elements	<b>577</b>
<b>Appendix C</b> Electron Binding Energies	<b>586</b>
<b>Appendix D</b> Radioactive Transformation Data	<b>594</b>
<b>Appendix E</b> Fission Product Chains	<b>678</b>
<b>Appendix F</b> Neutron-Particle Emission Cross-Section Data	<b>699</b>
<b>Answers to Selected Problems</b>	<b>701</b>
<b>Index</b>	<b>707</b>
