

McGraw-Hill

Calculations

A technical drawing of a pipe with various dimensions and labels. The drawing shows a perspective view of a pipe with a flange on one end. Dimensions are indicated with arrows and letters: 'A' for the length of the pipe, 'B' for the diameter, and 'C' for the thickness of the pipe wall. There are also labels 'D' and 'E' for other dimensions. The drawing is rendered in a light blue color on a dark blue background.

Water and Wastewater Calculations Manual

SHUNDAR LIN

- Step-by-step approach to calculation methods
- Calculations range from simple to complex
- Includes calculation methods from all aspects of water and wastewater sectors

About the Author viii

Preface ix

Chapter 1 Streams and Rivers

1

1. General 2
 2. Point Source Dilution 2
 3. Discharge Measurement 3
 4. Time of Travel 4
 5. Dissolved Oxygen and Water Temperature 5
 6. Biochemical Oxygen Demand Analysis 10
 7. Streeter-Phelps Oxygen Sag Formula 13
 8. BOD Models and K_1 Computation 15
 9. Determination of Reaeration Rate Constant K_2 41
 10. Sediment Oxygen Demand 49
 11. Organic Sludge Deposits 52
 12. Photosynthesis and Respiration 54
 13. Natural Self-purification in Streams 54
 14. SOD 78
 15. Apportionment of Stream Users 79
 16. Velz Reaeration Curve (a Pragmatic Approach) 86
 17. Stream DO Model (a Pragmatic Approach) 92
 18. Biological Factors 107
- References 120

Chapter 2 Lakes and Reservoirs

125

1. Lakes and Impoundment Impairments 125
 2. Lake Morphometry 126
 3. Water Quality Models 130
 4. Evaporation 131
 5. The Clean Lakes Program 137
- References 176

Chapter 3 Groundwater

179

1. Definition 180
 2. Hydrogeologic Parameters 184
 3. Steady Flows in Aquifers 196
 4. Anisotropic Aquifers 197
 5. Unsteady (Nonequilibrium) Flows 198
 6. Groundwater Contamination 212
 7. Setback Zones 217
- References 224

1. Definitions and Fluid Properties 228
 2. Water Flow in Pipes 236
 3. Pumps 264
 4. Water Flow in Open Channels 271
 5. Flow Measurements 290
- References 306

Chapter 5 Public Water Supply

1. Sources and Quantity of Water 308
 2. Population Estimates 311
 3. Water Requirements 315
 4. Regulation for Water Quality 321
 5. Water Treatment Processes 327
 6. Aeration and Air Stripping 327
 7. Solubility Equilibrium 354
 8. Coagulation 357
 9. Flocculation 365
 10. Sedimentation 369
 11. Filtration 377
 12. Water Softening 388
 13. Ion Exchange 396
 14. Iron and Manganese Removal 413
 15. Activated Carbon Adsorption 418
 16. Membrane Processes 423
 17. Residual from Water Plant 429
 18. Disinfection 434
 19. Water Fluoridation 461
- References 469

Chapter 6 Wastewater Engineering

1. What is Wastewater? 475
2. Characteristics of Wastewater 475
3. Sewer Systems 484
4. Quantity of Wastewater 487
5. Urban Stormwater Management 491
6. Design of Storm Drainage Systems 494
7. Precipitation and Run Off 494
8. Stormwater Quality 498
9. Sewer Hydraulics 505
10. Sewer Appurtenances 505
11. Pumping Stations 511
12. Sewer Construction 515
13. Wastewater Treatment Systems 518
14. Screening Devices 524
15. Comminutors 529
16. Grit Chamber 530
17. Flow Equalization 532
18. Sedimentation 534
19. Primary Sedimentation Tanks 551
20. Biological (Secondary) Treatment Systems 561
21. Activated-Sludge Process 566
22. Trickling Filter 640
23. Rotating Biological Contactor 656

- 24. Dual Biological Treatment 671
 - 25. Stabilization Ponds 671
 - 26. Secondary Clarifier 680
 - 27. Effluent Disinfection 688
 - 28. Advanced Wastewater Treatment 698
 - 29. Sludge (Residuals) Treatment and Disposal 744
- References 813

**Appendix A Illinois Environmental Protection Agency's
Macroinvertebrate Tolerance List 821**

Appendix B Well Function for Confined Aquifers 827

**Appendix C Solubility Product Constants for Solution at or near
Room Temperature 833**

**Appendix D Freundlich Adsorption Isotherm Constants for Toxic
Organic Compounds 836**

Appendix E Factors for Conversion 840
