

A scanning electron micrograph (SEM) showing a dense field of spherical cells, likely yeast or bacteria, used as a background for the book cover. The cells are illuminated from the side, creating highlights and shadows that emphasize their three-dimensional structure.

Second Edition

Basic Biotechnology

Edited by Colin Ratledge and Bjørn Kristiansen

CAMBRIDGE

Contents

<i>List of contributors</i>	page xi
<i>Preface</i>	xv
Part I Fundamentals and principles	1
I Public perception of biotechnology JOHN E. SMITH	3
1.1 Introduction	3
1.2 Public awareness of genetic engineering	4
1.3 Regulatory requirements – safety of genetically engineered foods	7
1.4 Labelling – how far should it go?	10
1.5 Policy making	11
1.6 Areas of significant public concern	12
1.7 Conclusions	16
1.8 Further reading	16
2 Biochemistry and physiology of growth and metabolism COLIN RATLEDGE	17
2.1 Introduction	17
2.2 Metabolism	18
2.3 Catabolic pathways	21
2.4 Gluconeogenesis	29
2.5 Energy production in aerobic micro-organisms	29
2.6 Anaerobic metabolism	32
2.7 Biosynthesis	35
2.8 Control of metabolic processes	38
2.9 Efficiency of microbial growth	43
2.10 Further reading	44
3 Stoichiometry and kinetics of microbial growth from a thermodynamic perspective J. J. HEIJNEN	45
Nomenclature	45
3.1 Introduction	45
3.2 Stoichiometry calculations	46
3.3 Stoichiometry predictions based on Gibbs energy dissipation	52
3.4 Growth kinetics from a thermodynamic point of view	56
3.5 Further reading	57
4 Genome management and analysis: prokaryotes COLIN R. HARWOOD and ANIL WIPAT	59
4.1 Introduction	59
4.2 Bacterial chromosomes and natural gene transfer	59
4.3 What is genetic engineering and what is it used for?	65
4.4 The basic tools of genetic engineering	66
4.5 Cloning vectors and libraries	76
4.6 Analysis of genomes/proteomes	81
4.7 Analysis of gene expression	83
4.8 Engineering genes and optimising products	87
4.9 Production of heterologous products	89
4.10 <i>In silico</i> analysis of bacterial genomes	92
4.11 Further reading	93

5 Genetic engineering: yeasts and filamentous fungi	95
DAVID B. ARCHER, DONALD A. MACKENZIE and DAVID J. JEENES	
Glossary	95
5.1 Introduction	97
5.2 Introducing DNA into fungi (fungal transformation)	100
5.3 Gene cloning	107
5.4 Gene structure, organisation and expression	116
5.5 Special methodologies	119
5.6 Biotechnological applications of fungi	120
5.7 Further reading	126
6 Microbial process kinetics JENS NIELSEN	127
Nomenclature	127
6.1 Introduction	128
6.2 Kinetic modelling of cell growth	130
6.3 Mass balances for ideal bioreactors	141
6.4 Further reading	149
7 Bioreactor design YUSUF CHISTI and MURRAY MOO-YOUNG	151
Nomenclature	151
7.1 Introduction	152
7.2 Bioreactor configurations	153
7.3 Bioreactor design features	158
7.4 Design for sterile operation	159
7.5 Photobioreactors	162
7.6 Heat transfer	164
7.7 Shear effects in culture	168
7.8 Further reading	171
8 Mass transfer HENK J. NOORMAN	173
Nomenclature	173
8.1 Introduction	174
8.2 The mass transfer steps	175
8.3 Mass transfer equations	177
8.4 Determining the volumetric mass transfer coefficients	183
8.5 The effect of scale on mass transfer	185
8.6 Further reading	186
9 Downstream processing in biotechnology	187
RAJNI HATTI-KAUL and BO MATTIASSON	
9.1 Introduction	187
9.2 Downstream processing: a multistage operation	187
9.3 Solid-liquid separation	188
9.4 Release of intracellular components	193
9.5 Concentration of biological products	195
9.6 Purification by chromatography	204
9.7 Product formulation	207
9.8 Monitoring of downstream processing	209
9.9 Process integration	210
9.10 Further reading	211
10 Measurement and control A. LÜBBERT and R. SIMUTIS	213
Nomenclature	213
10.1 Introduction	214

10.3	Structure of process models	215
10.3	Kinetic rate expressions	216
10.4	Advanced modelling considerations	222
10.5	Process supervision and control	228
10.6	Open-loop control	230
10.7	Closed-loop control	231
10.8	Conclusion	236
10.9	Further reading	238
11	Process economics BJØRN KRISTIANSEN/RAJINI	239
11.1	Introduction	239
11.2	The starting point	240
11.3	Cost estimates	240
11.4	Process design	242
11.5	Design exercise	244
11.6	Capital costs estimates	247
11.7	Operating costs estimates	247
11.8	The costs case - to build or not to build	250
11.9	Further reading	252
Part II	Practical applications	253
12	The business of biotechnology WILLIAM BAINS and CHRIS EVANS	255
12.1	Introduction	255
12.2	What is biotechnology used for?	255
12.3	Biotechnology companies, their care and nurturing	260
12.4	Investment in biotechnology	268
12.5	Who needs management?	275
12.6	Patents and biotechnology	278
12.7	Conclusion: jumping the fence	279
12.8	Further reading	279
13	Amino acids L. EGGEING, W. PFEFFERLE and H. SAHM	281
13.1	Introduction	281
13.2	Commercial use of amino acids	282
13.3	Production methods and tools	284
13.4	L-Glutamate	285
13.5	L-Lysine	289
13.6	L-Threonine	294
13.7	L-Phenylalanine	296
13.8	L-Tryptophan	298
13.9	L-Aspartate	300
13.10	Outlook	302
13.11	Acknowledgements	302
13.12	Further reading	302
14	Organic acids CHRISTIAN P. KUBICEK	305
14.1	Introduction	305
14.2	Citric acid	306
14.3	Gluconic acid	315
14.4	Lactic acid	317
14.5	Other acids	319
14.6	Further reading	324

15 Microbial polyhydroxyalkanoates, polysaccharides and lipids	
AListair J. Anderson and James P. Wynn	325
15.1 Introduction	325
15.2 Microbial polyhydroxyalkanoates	325
15.3 Microbial polysaccharides	333
15.4 Microbial lipids	339
15.5 Further reading	348
16 Antibiotics David A. Lowe	349
16.1 Introduction	349
16.2 Biosynthesis	351
16.3 Strain improvement	351
16.4 Genetic engineering	354
16.5 Analysis	354
16.6 Culture preservation and aseptic propagation	354
16.7 Scale-up	355
16.8 Fermentation	356
16.9 Penicillins	361
16.10 Cephalosporins	367
16.11 New β -lactam technologies	368
16.12 Aminoglycosides	370
16.13 Macrolides	373
16.14 Economics	373
16.15 Good Manufacturing Practices	374
16.16 Further reading	375
17 Baker's yeast Sven-Olof Enfors	377
Nomenclature	377
17.1 Introduction	378
17.2 Medium for baker's yeast production	380
17.3 Aerobic ethanol formation and consumption	381
17.4 The fed-batch technique used to control ethanol production	384
17.5 Industrial process control	386
17.6 Process outline	387
17.7 Further reading	389
18 Production of enzymes David A. Lowe	391
18.1 Introduction	391
18.2 Enzymes from animal and plant sources	393
18.3 Enzymes from microbial sources	395
18.4 Large-scale production	396
18.5 Biochemical fundamentals	398
18.6 Genetic engineering	400
18.7 Recovery of enzymes	402
18.8 Isolation of soluble enzymes	403
18.9 Enzyme purification	404
18.10 Immobilised enzymes	406
18.11 Legislative and safety aspects	407
18.12 Further reading	408
19 Synthesis of chemicals using enzymes	409
Thorleif Anthonsen	
19.1 Introduction	409
19.2 Hydrolytic enzymes	412

19.3	Chiral building blocks for synthesis	414
19.4	Reductions and oxidations	419
19.5	Use of enzymes in sugar chemistry	422
19.6	Use of enzymes to make amino acids and peptides	426
19.7	Further reading	428
20	Recombinant proteins of high value GEORG-B. KRESSE	429
20.1	Applications of high-value proteins	429
20.2	Analytical enzymes	430
20.3	Therapeutic proteins	436
20.4	Regulatory aspects of therapeutic proteins	446
20.5	Outlook to the future of protein therapies	446
20.6	Further reading	447
21	Mammalian cell culture N. VRIEZEN, J. P. VAN DIJKEN and L. HÄGGSTRÖM	449
21.1	Introduction	449
21.2	Mammalian cell lines and their characteristics	450
21.3	Commercial products	452
21.4	Protein glycosylation	453
21.5	Media for the cultivation of mammalian cells	455
21.6	Metabolism	458
21.7	Large-scale cultivation of mammalian cells	462
21.8	Genetic engineering of mammalian cells	468
21.9	Further reading	470
22	Biotransformations JOAQUIM M. S. CABRAL	471
22.1	Introduction	471
22.2	Biocatalyst selection	473
22.3	Biocatalyst immobilisation and performance	475
22.4	Immobilised enzyme reactors	489
22.5	Biocatalysis in non-conventional media	491
22.6	Concluding remarks	500
22.7	Further reading	501
23	Immunochemical applications MIKE CLARK	503
	Glossary	503
23.1	Introduction	506
23.2	Antibody structure and functions	506
23.3	Antibody protein fragments	510
23.4	Antibody affinity	512
23.5	Antibody specificity	513
23.6	Immunisation and production of polyclonal antisera	514
23.7	Monoclonal antibodies	517
23.8	Antibody engineering	518
23.9	Combinatorial and phage display libraries	520
23.10	<i>In vitro</i> uses of recombinant and monoclonal antibodies	522
23.11	<i>In vivo</i> uses of recombinant and monoclonal antibodies	526
23.12	Further reading	529
24	Environmental applications PHILIPPE VANDEVIVERE and WILLY VERSTRAETE	531
24.1	Introduction	531
24.2	Treatment of waste water	532

24.3	Digestion of organic slurries	540
24.4	Treatment of solid wastes	542
24.5	Treatment of waste gases	545
24.6	Soil remediation	549
24.7	Treatment of groundwater	554
24.8	Further reading	557
