List of figures	page xii	Part II: Human welfare	
List of tables	xviii	0.15	
Preface	xvii	3 Measuring human welfare	45
Language and measures	xix	How many people on earth?	45
Acknowledgements	xxii	The changing demographics	47
Permissions	xxiv	Overpopulation	48
		4 Life expectancy and health	50
Part I: The Litany		Life expectancy	50
		Life expectancy in the developing world	51
1 Things are getting better	3	Infant mortality	53
The Litany	3	Niness	55
Things are better - but not necessarily	good 4	Conclusion	58
Exaggeration and good management	5	5 Food and hunger	
Fundamentals: trends	5		60
Fundamentals: global trends	6	Malthus and everlasting hunger	60
Fundamentals: long-term trends	8	More food than ever	61
Fundamentals: how is it important?	9	Lower prices than ever	62
Fundamentals: people	11	The Green Revolution	62
Reality versus myths	12	Relative or absolute improvement?	64
Reality: Worldwatch Institute	13	Regional distribution: Africa	65
Reality: World Wide Fund for Nature	16	Regional distribution: China	66
Reality: Greenpeace	17	Conclusion	67
Reality: wrong bad statistics and econo	mics 18	Is inflation-adjusted GDP a reasonable	
Reality: water problems	19	measure of wealth?	68
Reality: Pimentel and global health I	21	6 Prosperity	70
Reality: Pimentel and global health II	24	Poverty and distribution	71
Reality versus rhetoric and poor predict	tions 27	Ever greater inequality?	73
Reality	30	Poorer still?	75 75
Reality and morality	32	More consumer goods	73 78
2 Why do we hear so much bad n	iews? 34	More education	81
Research	35	More leisure time	82
■ The file drawer and data massage	36	More safety and security	84
Organizations	37	Fewer catastrophes and accidents	85
The media	39	7.6	
Lopsided reality: sporadic but predictal		7 Conclusion to Part II: unprecedented	
Lopsided reality: bad news	40	human prosperity	87
Lopsided reality: conflict and guilt	41		
The consequences	41		

	rt III: Can human prosperity ntinue?			Other resources Why do we have ever more resources?	146 147
CO	manue?			Conclusion	148
8	Are we living on borrowed time?	91		Conclusion	140
	Resources - the foundation for welfare	91	13	Water	149
	• •			How much water in the world?	149
9	Will we have enough food?	93		The three central problems	151
	At least grain per capita is declining	93		Not enough water?	152
	Declining productivity	95		Will it get worse in the future?	154
	Limits to yields?	96		Will we see increased conflict?	156
	Biomass	99		Conclusion	157
	What about ordinary peasants?	100			
	Do we still need the high growth?	100		Conclusion to Part III: continued	
	Grain stocks are dropping!	101		prosperity	159
	What about China?	102			
	Should we worry about erosion?	104	Pai	rt IV: Pollution: does it undercut	;
	What about fish?	106	hu	man prosperity?	
	Conclusion	108		• •	
40	Formats and the local mathematical states of the same	110		Air pollution	163
10	Forests – are we losing them?	110		Air pollution in times past	163
	Forests and history	112		What is dangerous?	165
	Deforestation: a general view	112		Particles	167
	Deforestation: how much?	114		Lead	170
	How much forest?	115		SO ₂	172
	Conclusion	117		Ozone	173
11	Energy	118		NO _x	174
11	We are a civilization built on energy	118		co	175
	Do we have enough energy to go on?	119		And the developing world? Both growth and	
	The oil crisis	120		environment	175
	How much oil left?	121		Conclusion	177
	Optimists and pessimists arguing	124			
	Ever more oil available	125	16	Acid rain and forest death	178
		125	17	Indoor air pollution	182
	Other fossil energy sources	128		Indoor air pollution in the developing world	182
	Nuclear energy	128		Indoor air pollution in the developed world	183
	Renewable energy			micor un ponunon in une nevelopen worm	102
	Solar energy	133	18	Allergies and asthma	185
	Wind energy	134			
	Storage and mobile consumption	135	19	Water pollution	189
	Conclusion	135		Oil pollution in the oceans	189
12	Non-energy resources	137		Oil in the Gulf	191
	The pessimists bet on resources running out -	107		Exxon Valdez: still a catastrophe?	192
	and lost	137		Pollution in coastal waters	194
	Falling prices	137		Suffocation in coastal waters	195
	Cement	138		Health effects from fertilizer	201
		138		Pollution in rivers	202
	Aluminum Iron	140	20	347	201
			20	Waste: running out of space?	206
	Cold and eller	143	21	Conclusion to Part IV: the pollution	
	Gold and silver	144 145		burden has diminished	210
	Nitrogen, phosphorus and potassium	145
