

Pipeline Technology

Brugge • Belgium • May 21-24, 2000

Volume I

Editor: R. Denys

CONTENTS

Volume I

KEYNOTE LECTURE

- Change in the pipeline industry? 1
P. Hopkins

Production

PIPELINE DEVELOPMENTS

- EPRC's view of pipeline integrity developments beyond 2000 27
C. Knauf and J. Spiekhou
- Growing pipeline market in America – 20 billion dollars for 2000 39
C. K. Jevabala

PIPELINES - FUTURE

- Reliability of gas pipelines of the new generation – XXI century 55
O.M. Ivantsov and V.V. Kharionovskiy
- Construction of ultra high strength steel pipelines 69
J. Hammond and N.A. Millwood

PIPELINES - SAFETY

- Qualifying criteria for major-accident hazards pipelines in EU legislation 89
G.A. Papadakis and J. Wettig
- The added value of a user inspectorate in a gas transmission company 103
J. Spiekhou

OLD PIPELINES AND PLASTIC COLLAPSE

- New method to manage operational risk of pipelines 117
I. Harmati and J. Lukács
- How to deal with older pipelines 127
W. Sloterdijk and P.H.A. Rietjens
- The way to handle older pipelines with low toughness - A risk assessment methodology gives the answer - 137
A. Pijnacker Hordijk, F. Noltes, G. Stallenberg and H. van Merriënboer

Failure characteristics and defect tolerance levels of girth welds in large diameter X65/X70 steel linepipes : experimental verification through wide plate testing and comparison with ECA prediction models <i>R.M. Denys, A.A. Lefevre, C. De Jaeger and S. Claessens</i>	151
---	-----

Effects of stable ductile crack growth on plastic collapse defect assessments <i>R.M. Denys, A.A. Lefevre, P. De Baets and J. Degrieck</i>	169
---	-----

Plastic collapse analysis of pipelines containing surface-breaking circumferential defects <i>Y.-Y. Wang, G.M. Wilkowski and D.J. Horsley</i>	191
--	-----

SPECIAL PIPELINE STEELS

New weldable supermartensitic stainless steels for wet gas transport and processing <i>J.-J. Dufrane and J. Heather</i>	211
--	-----

Fracture toughness properties of two grades of X80 supermartensitic welded pipes <i>E. Deleu and A. Dhooge</i>	219
---	-----

CRA clad plates for pipelines with extended property combinations produced by the TMCP-CLAD process <i>C. Dilg, W. Schütz and V. Schwinn</i>	239
---	-----

The role of metallurgy and micro-mechanisms of fracture in assessing structural integrity of bimetallic ferrite-austenite pipeline welds <i>P. Nevasmaa, A. Laukkanen and U. Ehrnsten</i>	253
--	-----

Development of 20" weldable 13%CR seamless line pipe <i>K. Yamazaki, T. Suzuki, S. Hashizume, G. Cumino, A. Poli, A. Woloszyn, P. Woolin and I. Scoppio</i>	269
--	-----

Weldable 13%Cr steel line pipe <i>Y. Shimbo, S. Endo, S. Hashizume, J. Kondo, T. Suzuki and S. Kusaka</i>	279
--	-----

Induction bending of clad pipes made by the "Liquid interface diffusion bonding technique" (L.I.D.B.) <i>W.C. Turner, E. Cherretté and D. De Roeck</i>	291
---	-----

CRACK ARREST ASSESSMENT

High pressure long distance transmission gas lines : structural integrity of high strength steel grade pipeline <i>G. Mannucci, G. Demofonti, L. Barsanti and C.M. Spinelli</i>	303
--	-----

Numerical model for the backfill constraint effect during fracture propagation on buried large diameter gas pipelines <i>P. Salvini, G. Berardo, G. Demofonti and G. Mannucci</i>	315
--	-----

Full scale validation of the fracture control of a pipeline designed to transport rich natural gas <i>D.M. Johnson, N. Horner, L. Carlson and R. Eiber</i>	331
---	-----

Contrasting fracture behavior characterized using charpy vee-notch and dynamic-tear test methods <i>B.N. Leis</i>	343
Recent efforts on characterizing propagating ductile fracture resistance of linepipe steels <i>G. Wilkowski, Y.-Y. Wang and D. Rudland</i>	359
Fracture propagation control for gas pipelines – past, present and future <i>A.B. Rothwell</i>	387
Predicting fracture arrest based on a relationship between charpy vee-notch toughness and dynamic crack-propagation resistance <i>B.N. Leis</i>	407
Revision of the BG (British Gas) model for ductile shear fractures in gas transmission pipelines <i>R.M. Andrews, J.H. Liu and P.S. Cumber</i>	421
Fracture control requirements for gas transmission pipelines <i>R. Eiber, L. Carlson and B. Leis</i>	437
Fracture arrest criteria for spiral welded pipes <i>V. Pistone and G. Mannucci</i>	455
X100 PIPELINE STEELS	
Development of large-diameter pipe in grade X 100 – State-of-the-art report from the manufacturer's point of view – <i>H.-G. Hillenbrand, A. Liessem, G. Knauf, K. Niederhoff and J. Bauer</i>	469
Characterisation of ultra high strength linepipe <i>R.K. Ohm, J.T. Martin and K.M. Orzessek</i>	483
Failure behaviour of ultra high strength line pipe <i>B.Fu, N.A. Millwood, D.Q. Vu, S. Matthews and M. Jacobs</i>	497
Large diameter X100 gas linepipes : fracture propagation evaluation by full-scale burst test <i>G. Demofonti, G. Mannucci, C.M. Spinelli, L. Barsanti and H.G. Hillenbrand</i>	509
Seam weld defect tolerance in ultra high strength steel pipelines <i>J.T. Martin, R.W.J. Koers and R.K. Ohm</i>	521
PIPELINE DESIGN	
An assessment procedure to justify operation of gas transmission pipelines at design factors up to 0.8 <i>A. Francis, A.M. Edwards, R.J. Espiner and G. Senior</i>	531
The field hydrotest and the true strength properties of steel pipelines <i>G. Hohl, G. Knauf and G. Vogt</i>	549

Unified design method for most pipeline materials <i>J.K. Jeyapalan</i>	565
Comparing the integrity and economics of pipeline girth welds using different non-destructive testing techniques and acceptance criteria <i>A.H.M. Krom, M.A. Lont, M.J. van den Heuvel and J.J.M. van Nisselroij</i>	581
Authors index	599
