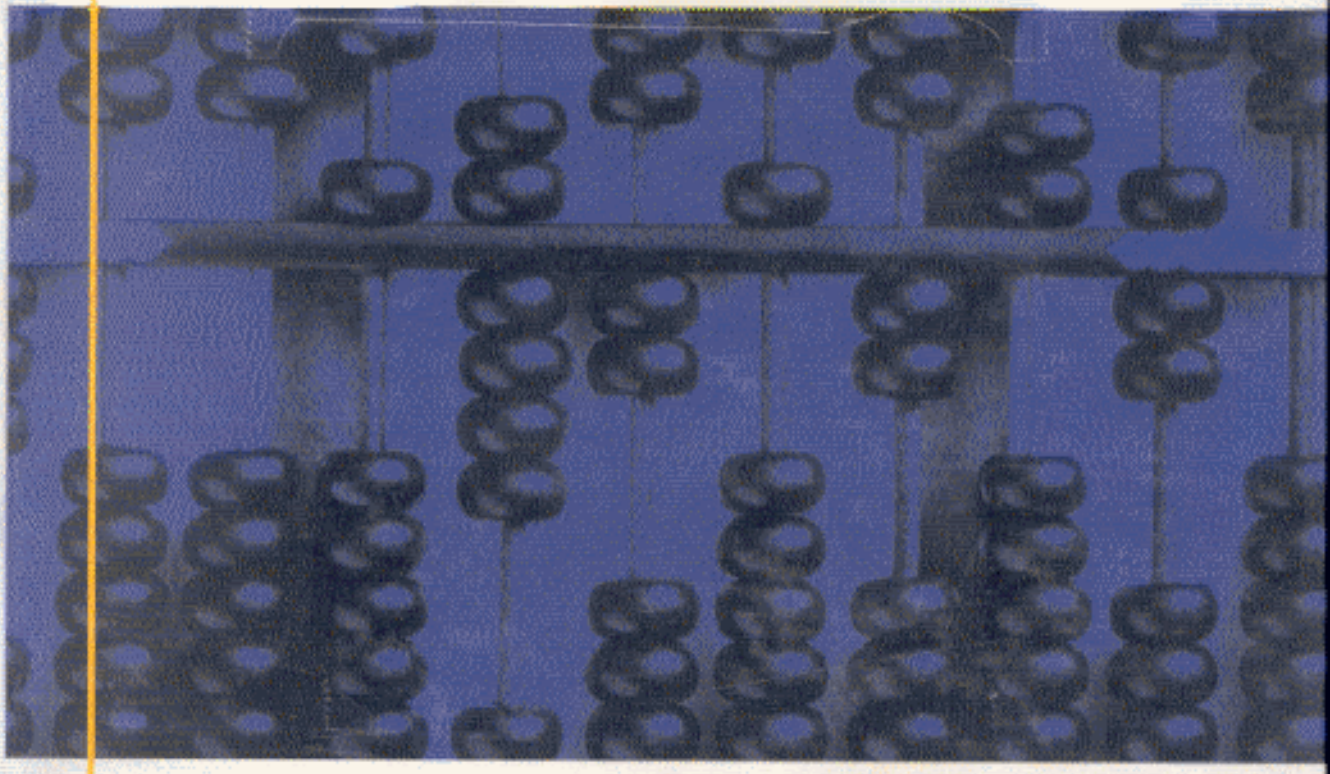
Applied Numerical Methods for Engineers and Scientists



Singiresu S. Rao

Contents

	PREFACE		***xvii***
1	***INTRODUCTION TO NUMERICAL METHODS***		***1***
	1.1	Importance of Numerical Methods in Engineering	1
	1.2	Computers	2
	1.3	Computer Programming Languages	5
	1.4	Data Representation	7
	1.5	Programming Structure	12
	1.6	Errors	13
	1.7	Numerical Methods Considered	22
	1.8	Software for Numerical Analysis	30
	1.9	Use of Software Packages	31
	1.10	Computer Programs	33
		References and Bibliography	37
		Review Questions	38
		Problems	41
2	***SOLUTION OF NONLINEAR EQUATIONS***		***48***
	2.1	Introduction	48
	2.2	Engineering Applications	53
	2.3	Incremental Search Method	58
	2.4	Bisection Method	61
	2.5	Newton–Raphson Method	64
	2.6	Secant Method	70
	2.7	Regula Falsi Method	73

2.8	Fixed Point Iteration or Successive Substitution Method	75
2.9	Determination of Multiple Roots	77
2.10	Bairstow's Method	79
2.11	Muller's Method	84
2.12	Newton–Raphson Method for Simultaneous Nonlinear Equations	88
2.13	Unconstrained Minimization	92
2.14	Convergence of Methods	93
2.15	Choice of the Method	97
2.16	Use of Software Packages	98
2.17	Computer Programs	107
	References and Bibliography	113
	Review Questions	115
	Problems	119
3	***SOLUTION OF SIMULTANEOUS LINEAR ALGEBRAIC EQUATIONS***	***141***
3.1	Introduction	142
3.2	Engineering Applications	143
3.3	Vector and Matrix Norms	149
3.4	Basic Concepts of Solution	152
3.5	Linearly Independent Equations	152
3.6	Ill-Conditioned Equations	153
3.7	Graphical Interpretation of the Solution	157
3.8	Solution Using Cramer's Rule	159
3.9	Gauss Elimination Method	162
3.10	Gauss–Jordan Elimination Procedure	169
3.11	*LU* Decomposition Method	172
3.12	Jacobi Iteration Method	182
3.13	Gauss–Seidel Iteration Method	185
3.14	Relaxation Methods	187
3.15	Simultaneous Linear Equations with Complex Coefficients and Constants	188

3.16	Matrix Inversion	191
3.17	Equations with Special Form of Coefficient Matrix	193
3.18	Overdetermined, Underdetermined, and Homogeneous Equations	200
3.19	Comparative Efficiencies of Various Methods and Recommendations	209
3.20	Choice of the Method	214
3.21	Use of Software Packages	214
3.22	Computer Programs	223
	References and Bibliography	226
	Review Questions	228
	Problems	233
4	***SOLUTION OF MATRIX EIGENVALUE PROBLEM***	***270***
4.1	Introduction	270
4.2	Engineering Applications	274
4.3	Conversion of General Eigenvalue Problem to Standard Form	280
4.4	Methods of Solving Eigenvalue Problems	285
4.5	Solution of the Characteristic Polynomial Equation	286
4.6	Jacobi Method	291
4.7	Given's Method	297
4.8	Householder's Method	301
4.9	Eigenvalues of a Tridiagonal Matrix	310
4.10	Eigenvectors of a Tridiagonal Matrix	313
4.11	Power Method	315
4.12	Choice of Method	324
4.13	Use of Software Packages	324
4.14	Computer Programs	333
	References and Bibliography	337
	Review Questions	338
	Problems	341

5 CURVE FITTING AND INTERPOLATION		***364***
5.1	Introduction	364
5.2	Engineering Applications	366
5.3	Collocation-Polynomial Fit	368
5.4	Interpolation	370
5.5	Lagrange Interpolation Formula	370
5.6	Newton's Divided-Difference Interpolating Polynomials	373
5.7	Interpolation Using Chebyshev Polynomials	383
5.8	Interpolation Using Splines	387
5.9	Least-Squares Regression	399
5.10	Curve Fitting with Multiple Variables	410
5.11	Choice of Method	412
5.12	Use of Software Packages	414
5.13	Computer Programs	434
	References and Bibliography	436
	Review Questions	437
	Problems	441
6 STATISTICAL METHODS		***452***
6.1	Introduction	452
6.2	Engineering Applications	452
6.3	Basic Definitions	454
6.4	Histogram and Probability Density Function	455
6.5	Statistical Characteristics	460
6.6	Normal Distribution	464
6.7	Statistical Tests	468
6.8	Chi-Square Test for Distribution	474
6.9	Choice of Method	476
6.10	Use of Software Packages	477
6.11	Computer Programs	483

References and Bibliography 487
Review Questions 488
Problems 491

7 NUMERICAL DIFFERENTIATION 500

7.1 Introduction 500
7.2 Engineering Applications 501
7.3 Definition of the Derivative 503
7.4 Basic Finite-Difference Approximations 503
7.5 Using Taylor's Series Expansions 504
7.6 Using Difference Operators 519
7.7 Approximation of Derivatives Using Difference Operators 520
7.8 Using Differentiation of Interpolating Polynomials 522
7.9 Finite-Difference Approximations for Partial Derivatives 525
7.10 Choice of Method 529
7.11 Use of Software Packages 529
7.12 Computer Programs 540
References and Bibliography 543
Review Questions 545
Problems 547

8 NUMERICAL INTEGRATION 560

8.1 Introduction 560
8.2 Engineering Applications 562
8.3 Newton–Cotes Formulas 565
8.4 Simpson's Rule 574
8.5 General Newton–Cotes Formulas 583
8.6 Richardson's Extrapolation 584
8.7 Romberg Integration 587
8.8 Gauss Quadrature 588
8.9 Integration with Unequal Segments 597

8.10	Numerical Integration of Improper Integrals	598
8.11	Numerical Integration in Two- and Three-Dimensional Domains	602
8.12	Choice of Method	605
8.13	Use of Software Packages	605
8.14	Computer Programs	610
	References and Bibliography	614
	Review Questions	615
	Problems	618

9 ORDINARY DIFFERENTIAL EQUATIONS: INITIAL-VALUE PROBLEMS 631

9.1	Introduction	631
9.2	Engineering Applications	633
9.3	Simultaneous Differential Equations	636
9.4	Solution Concept	638
9.5	Euler's Method	639
9.6	Improvements and Modifications of Euler's Method	647
9.7	Runge–Kutta Methods	654
9.8	Multistep Methods	665
9.9	Adams Methods	665
9.10	Predictor–Corrector Methods	672
9.11	Simultaneous Differential Equations	683
9.12	Stiff Equations	684
9.13	Choice of Method	686
9.14	Use of Software Packages	687
9.15	Computer Programs	699
	References and Bibliography	703
	Review Questions	705
	Problems	711

10 ORDINARY DIFFERENTIAL EQUATIONS: BOUNDARY-VALUE PROBLEMS 723

10.1 Introduction 723
10.2 Engineering Applications 724
10.3 Shooting Methods 727
10.4 Generalization to n Equations 732
10.5 Finite-Difference Methods 740
10.6 Solution of Nonlinear Boundary-Value Problems 752
10.7 Solution of Eigenvalue Problems 754
10.8 Choice of Method 761
10.9 *Use of Software Packages* 762
10.10 Computer Programs 777
References and Bibliography 781
Review Questions 782
Problems 785

11 PARTIAL DIFFERENTIAL EQUATIONS 794

11.1 Introduction 794
11.2 Engineering Applications 796
11.3 Initial and Boundary Conditions 799
11.4 Elliptic Partial Differential Equations 800
11.5 Parabolic Partial Differential Equations 814
11.6 Crank–Nicholson Method 822
11.7 Method of Lines 823
11.8 Two-Dimensional Parabolic Problems 826
11.9 Hyperbolic Partial Differential Equations 829
11.10 Method of Characteristics 840
11.11 Finite-Difference Formulas in Polar Coordinate System 846
11.12 Choice of Method 848
11.13 Use of Software Packages 849

11.14	Computer Programs	863
	References and Bibliography	868
	Review Questions	870
	Problems	873
12 OPTIMIZATION		***885***
12.1	Introduction	885
12.2	Types of Optimization Problems	889
12.3	Engineering Applications	890
12.4	Optimization Methods from Differential Calculus	894
12.5	Linear-Programming Problem	902
12.6	Simplex Method	906
12.7	Search Methods for Nonlinear Optimization	907
12.8	Optimization of a Function of a Single Variable	908
12.9	Unconstrained Minimization of a Function of Several Variables	918
12.10	Constrained Minimization of a Function of Several Variables	924
12.11	Choice of Method	928
12.12	Use of Software Packages	928
12.13	Computer Programs	936
	References and Bibliography	944
	Review Questions	945
	Problems	949
13 FINITE-ELEMENT METHOD		***958***
13.1	Introduction	958
13.2	Engineering Applications	959
13.3	Discretization of the Domain	962
13.4	Interpolation Functions	965
13.5	Derivation of Element Characteristic Matrices and Vectors	975
13.6	Assemblage of Element Characteristic Matrices and Vectors	981

13.7	Solution of System Equations	981
13.8	Choice of Method	992
13.9	Use of Software Packages	993
13.10	Computer Programs	1001
	References and Bibliography	1005
	Review Questions	1006
	Problems	1010

APPENDIX A BASICS OF FORTRAN 90 ***1019***

APPENDIX B BASICS OF C LANGUAGE ***1026***

APPENDIX C BASICS OF MAPLE ***1030***

APPENDIX D BASICS OF MATLAB ***1034***

APPENDIX E BASICS OF MATHCAD ***1038***

APPENDIX F REVIEW OF MATRIX ALGEBRA ***1042***

APPENDIX G STATISTICAL TABLES ***1049***
