PART ONE. PRELIMINARIES

1 Introduction	3
1.1 General	3
1.1.1 Historical Background	3
1.1.2 Organization of Text	4
1.2 One-Dimensional Computations by Finite Difference Methods	6
1.3 One-Dimensional Computations by Finite Element Methods	7
1.4 One-Dimensional Computations by Finite Volume Methods	11
1.4.1 FVM via FDM	11
1.4.2 FVM via FEM	13
1.5 Neumann Boundary Conditions	13
1.5.1 FDM	14
1.5.2 FEM	15
1.5.3 FVM via FDM	15
1.5.4 FVM via FEM	16
1.6 Example Problems	17
1.6.1 Dirichlet Boundary Conditions	17
1.6.2 Neumann Boundary Conditions	20
1.7 Summary	24
References	26
2 Governing Equations	29
2.1 Classification of Partial Differential Equations	29
2.2 Navier-Stokes System of Equations	33
2.3 Boundary Conditions	38
2.4 Summary	41
References	42

PART TWO. FINITE DIFFERENCE METHODS

3 Derivation of Finite Difference Equations	45
3.1 Simple Methods	45
3.2 General Methods	46
3.3 Higher Order Derivatives	50

3.4	<i>Multidimensional Finite Difference Formulas</i>	53
3.5	Mixed Derivatives	57
3.6	Nonuniform Mesh	59
3.7	Higher Order Accuracy Schemes	60
3.8	Accuracy of Finite Difference Solutions	61
3.9	Summary	62
	References	62
4	Solution Methods of Finite Difference Equations	63
4.1	Elliptic Equations	63
4.1.1	Finite Difference Formulations	63
4.1.2	Iterative Solution Methods	65
4.1.3	Direct Method with Gaussian Elimination	67
4.2	Parabolic Equations	67
4.2.1	Explicit Schemes and von Neumann Stability Analysis	68
4.2.2	Implicit Schemes	71
4.2.3	Alternating Direction Implicit (ADI) Schemes	72
4.2.4	Approximate Factorization	73
4.2.5	<i>Fractional Step Methods</i>	75
4.2.6	Three Dimensions	75
4.2.7	Direct Method with Tridiagonal Matrix Algorithm	76
4.3	Hyperbolic Equations	77
4.3.1	Explicit Schemes and Von Neumann Stability Analysis	77
4.3.2	Implicit Schemes	81
4.3.3	Multistep (Splitting, Predictor-Corrector) Methods	81
4.3.4	Nonlinear Problems	83
4.3.5	Second Order One-Dimensional Wave Equations	87
4.4	Burgers' Equation	87
4.4.1	Explicit and Implicit Schemes	88
4.4.2	Runge-Kutta Method	90
4.5	Algebraic Equation Solvers and Sources of Errors	91
4.5.1	Solution Methods	91
4.5.2	Evaluation of Sources of Errors	91
4.6	Coordinate Transformation for Arbitrary Geometries	94
4.6.1	Determination of Jacobians and Transformed Equations	94
4.6.2	Application of Neumann Boundary Conditions	97
4.6.3	Solution by MacCormack Method	98
4.7	Example Problems	98
4.7.1	Elliptic Equation (Heat Conduction)	98
4.7.2	Parabolic Equation (Couette Flow)	100
4.7.3	Hyperbolic Equation (First Order Wave Equation)	101
4.7.4	Hyperbolic Equation (Second Order Wave Equation)	103
4.7.5	Nonlinear Wave Equation	104
4.8	Summary	105
	References	105
5	Incompressible Viscous Flows via Finite Difference Methods	106
5.1	General	106
5.2	Artificial Compressibility Method	107

5.3	Pressure Correction Methods	108
5.3.1	Semi-Implicit Method for Pressure-Linked Equations (SIMPLE)	108
5.3.2	Pressure Implicit with Splitting of Operators	112
5.3.3	Marker-and-Cell (MAC) Method	115
5.4	Vortex Methods	115
5.5	Summary	118
	References	119
6	Compressible Flows via Finite Difference Methods	120
6.1	Potential Equation	121
6.1.1	Governing Equations	121
6.1.2	Subsonic Potential Flows	123
6.1.3	Transonic Potential Flows	123
6.2	Euler Equations	129
6.2.1	Mathematical Properties of Euler Equations	130
6.2.1.1	Quasilinearization of Euler Equations	130
6.2.1.2	Eigenvalues and Compatibility Relations	132
6.2.1.3	Characteristic Variables	134
6.2.2	Central Schemes with Combined Space-Time Discretization	136
6.2.2.1	Lax-Friedrichs First Order Scheme	138
6.2.2.2	Lax-Wendroff Second Order Scheme	138
6.2.2.3	Lax-Wendroff Method with Artificial Viscosity	139
6.2.2.4	Explicit MacCormack Method	140
6.2.3	Central Schemes with Independent Space-Time Discretization	141
6.2.4	First Order Upwind Schemes	142
6.2.4.1	Flux Vector Splitting Method	142
6.2.4.2	Godunov Methods	145
6.2.5	Second Order Upwind Schemes with Low Resolution	148
6.2.6	Second Order Upwind Schemes with High Resolution (TVD Schemes)	150
6.2.7	Essentially Nonoscillatory Scheme	163
6.2.8	Flux-Corrected Transport Schemes	165
6.3	Navier-Stokes System of Equations	166
6.3.1	Explicit Schemes	167
6.3.2	Implicit Schemes	169
6.3.3	PISO Scheme for Compressible Flows	175
6.4	Preconditioning Process for Compressible and Incompressible Flows	178
6.4.1	General	178
6.4.2	Preconditioning Matrix	179
6.5	Flowfield-Dependent Variation Methods	180
6.5.1	Basic Theory	180
6.5.2	Flowfield-Dependent Variation Parameters	183
6.5.3	FDV Equations	185
6.5.4	Interpretation of Flowfield-Dependent Variation Parameters	187
6.5.5	Shock-Capturing Mechanism	188
6.5.6	Transitions and Interactions between Compressible and Incompressible Flows	191

6.5.7	Transitions and Interactions between Laminar and Turbulent Flows	193
6.6	Other Methods	195
6.6.1	Artificial Viscosity Flux Limiters	195
6.6.2	Fully Implicit High Order Accurate Schemes	196
6.6.3	Point Implicit Methods	197
6.7	Boundary Conditions	197
6.7.1	Euler Equations	197
6.7.1.1	One-Dimensional Boundary Conditions	197
6.7.1.2	Multi-Dimensional Boundary Conditions	204
6.7.1.3	Nonreflecting Boundary Conditions	204
6.7.2	Navier-Stokes System of Equations	205
6.8	Example Problems	207
6.8.1	Solution of Euler Equations	207
6.8.2	Triple Shock Wave Boundary Layer Interactions Using FDV Theory	208
6.9	Summary	213
	References	214
7	Finite Volume Methods via Finite Difference Methods	218
7.1	General	218
7.2	Two-Dimensional Problems	219
7.2.1	Node-Centered Control Volume	219
7.2.2	Cell-Centered Control Volume	223
7.2.3	Cell-Centered Average Scheme	225
7.3	Three-Dimensional Problems	227
7.3.1	3-D Geometry Data Structure	227
7.3.2	Three-Dimensional FVM Equations	232
7.4	FVM-FDV Formulation	234
7.5	Example Problems	239
7.6	Summary	239
	References	239
PART THREE. FINITE ELEMENT METHODS		
8	Introduction to Finite Element Methods	243
8.1	General	243
8.2	Finite Element Formulations	245
8.3	Definitions of Errors	254
8.4	Summary	259
	References	260
9	Finite Element Interpolation Functions	262
9.1	General	262
9.2	One-Dimensional Elements	264
9.2.1	Conventional Elements	264
9.2.2	Lagrange Polynomial Elements	269
9.2.3	Hermite Polynomial Elements	271
9.3	Two-Dimensional Elements	273
9.3.1	Triangular Elements	273

9.3.2	Rectangular Elements	284
9.3.3	Quadrilateral Isoparametric Elements	286
9.4	Three-Dimensional Elements	298
9.4.1	Tetrahedral Elements	298
9.4.2	Triangular Prism Elements	302
9.4.3	Hexahedral Isoparametric Elements	303
9.5	Axisymmetric Ring Elements	305
9.6	Lagrange and Hermite Families and Convergence Criteria	306
9.7	Summary	308
	References	308
10	Linear Problems	309
10.1	Steady-State Problems – Standard Galerkin Methods	309
10.1.1	Two-Dimensional Elliptic Equations	309
10.1.2	Boundary Conditions in Two Dimensions	315
10.1.3	Solution Procedure	320
10.1.4	Stokes Flow Problems	324
10.2	Transient Problems – Generalized Galerkin Methods	327
10.2.1	Parabolic Equations	327
10.2.2	Hyperbolic Equations	332
10.2.3	Multivariable Problems	334
10.2.4	Axisymmetric Transient Heat Conduction	335
10.3	Solutions of Finite Element Equations	337
10.3.1	Conjugate Gradient Methods (CGM)	337
10.3.2	Element-by-Element (EBE) Solutions of FEM Equations	340
10.4	Example Problems	342
10.4.1	Solution of Poisson Equation with Isoparametric Elements	342
10.4.2	Parabolic Partial Differential Equation in Two Dimensions	343
10.5	Summary	346
	References	346
11	Nonlinear Problems/Convection-Dominated Flows	347
11.1	Boundary and Initial Conditions	347
11.1.1	Incompressible Flows	348
11.1.2	Compressible Flows	353
11.2	Generalized Galerkin Methods and Taylor-Galerkin Methods	355
11.2.1	Linearized Burgers' Equations	355
11.2.2	Two-Step Explicit Scheme	358
11.2.3	Relationship between FEM and FDM	362
11.2.4	Conversion of Implicit Scheme into Explicit Scheme	365
11.2.5	Taylor-Galerkin Methods for Nonlinear Burgers' Equations	366
11.3	Numerical Diffusion Test Functions	367
11.3.1	Derivation of Numerical Diffusion Test Functions	368
11.3.2	Stability and Accuracy of Numerical Diffusion Test Functions	369
11.3.3	Discontinuity-Capturing Scheme	376
11.4	Generalized Petrov-Galerkin (GPG) Methods	377
11.4.1	Generalized Petrov-Galerkin Methods for Unsteady Problems	377
11.4.2	Space-Time Galerkin/Least Squares Methods	378

11.5	Solutions of Nonlinear and Time-Dependent Equations and Element-by-Element Approach	380
11.5.1	Newton-Raphson Methods	380
11.5.2	Element-by-Element Solution Scheme for Nonlinear Time Dependent FEM Equations	381
11.5.3	Generalized Minimal Residual Algorithm	384
11.6	Example Problems	391
11.6.1	Nonlinear Wave Equation (Convection Equation)	391
11.6.2	Pure Convection in Two Dimensions	391
11.6.3	Solution of 2-D Burgers' Equation	394
11.7	Summary	396
	References	396
12	Incompressible Viscous Flows via Finite Element Methods	399
12.1	Primitive Variable Methods	399
12.1.1	Mixed Methods	399
12.1.2	Penalty Methods	400
12.1.3	Pressure Correction Methods	401
12.1.4	Generalized Petrov-Galerkin Methods	402
12.1.5	Operator Splitting Methods	403
12.1.6	Semi-Implicit Pressure Correction	405
12.2	Vortex Methods	406
12.2.1	Three-Dimensional Analysis	407
12.2.2	Two-Dimensional Analysis	410
12.2.3	Physical Instability in Two-Dimensional Incompressible Flows	411
12.3	Example Problems	413
12.4	Summary	416
	References	416
13	Compressible Flows via Finite Element Methods	418
13.1	Governing Equations	418
13.2	Taylor-Galerkin Methods and Generalized Galerkin Methods	422
13.2.1	Taylor-Galerkin Methods	422
13.2.2	Taylor-Galerkin Methods with Operator Splitting	425
13.2.3	Generalized Galerkin Methods	427
13.3	Generalized Petrov-Galerkin Methods	428
13.3.1	Navier-Stokes System of Equations in Various Variable Forms	428
13.3.2	The GPG with Conservation Variables	431
13.3.3	The GPG with Entropy Variables	433
13.3.4	The GPG with Primitive Variables	434
13.4	Characteristic Galerkin Methods	435
13.5	Discontinuous Galerkin Methods or Combined FEM/FDM/FVM Methods	438
13.6	Flowfield-Dependent Variation Methods	440
13.6.1	Basic Formulation	440
13.6.2	Interpretation of FDV Parameters Associated with Jacobians	443
13.6.3	Numerical Diffusion	445

13.6.4	Transitions and Interactions between Compressible and Incompressible Flows and between Laminar and Turbulent Flows	446
13.6.5	Finite Element Formulation of FDV Equations	447
13.6.6	Boundary Conditions	449
13.7	Example Problems	452
13.8	Summary	459
	References	460
14	Miscellaneous Weighted Residual Methods	462
14.1	Spectral Element Methods	462
14.1.1	Spectral Functions	463
14.1.2	Spectral Element Formulations by Legendre Polynomials	467
14.1.3	Two-Dimensional Problems	471
14.1.4	Three-Dimensional Problems	475
14.2	Least Squares Methods	478
14.2.1	LSM Formulation for the Navier-Stokes System of Equations	478
14.2.2	FDV-LSM Formulation	480
14.2.3	Optimal Control Method	480
14.3	Finite Point Method (FPM)	481
14.4	Example Problems	483
14.4.1	Sharp Fin Induced Shock Wave Boundary Layer Interactions	483
14.4.2	Asymmetric Double Fin Induced Shock Wave Boundary Layer Interaction	486
14.5	Summary	489
	References	489
15	Finite Volume Methods via Finite Element Methods	491
15.1	General	491
15.2	Formulations of Finite Volume Equations	492
15.2.1	Burgers' Equations	492
15.2.2	Incompressible and Compressible Flows	500
15.2.3	Three-Dimensional Problems	502
15.3	Example Problems	503
15.4	Summary	507
	References	508
16	Relationships between Finite Differences and Finite Elements and Other Methods	509
16.1	Simple Comparisons between FDM and FEM	510
16.2	Relationships between FDM and FDV	514
16.3	Relationships between FEM and FDV	518
16.4	Other Methods	522
16.4.1	Boundary Element Methods	522
16.4.2	Coupled Eulerian-Lagrangian Methods	525
16.4.3	Particle-in-Cell (PIC) Method	528
16.4.4	Monte Carlo Methods (MCM)	528
16.5	Summary	530
	References	530

**PART FOUR. AUTOMATIC GRID GENERATION, ADAPTIVE METHODS,
AND COMPUTING TECHNIQUES**

17 Structured Grid Generation	533
17.1 Algebraic Methods	533
17.1.1 Unidirectional Interpolation	533
17.1.2 Multidirectional Interpolation	537
17.1.2.1 Domain Vertex Method	537
17.1.2.2 Transfinite Interpolation Methods (TFI)	545
17.2 PDE Mapping Methods	551
17.2.1 Elliptic Grid Generator	551
17.2.1.1 Derivation of Governing Equations	551
17.2.1.2 Control Functions	557
17.2.2 Hyperbolic Grid Generator	558
17.2.2.1 Cell Area (Jacobian) Method	560
17.2.2.2 Arc-Length Method	561
17.2.3 Parabolic Grid Generator	562
17.3 Surface Grid Generation	562
17.3.1 Elliptic PDE Methods	563
17.3.1.1 Differential Geometry	563
17.3.1.2 Surface Grid Generation	567
17.3.2 Algebraic Methods	569
17.3.2.1 Points and Curves	569
17.3.2.2 Elementary and Global Surfaces	573
17.3.2.3 Surface Mesh Generation	574
17.4 Multiblock Structured Grid Generation	577
17.5 Summary	580
References	580
18 Unstructured Grid Generation	581
18.1 Delaunay-Voronoi Methods	581
18.1.1 Watson Algorithm	582
18.1.2 Bowyer Algorithm	587
18.1.3 Automatic Point Generation Scheme	590
18.2 Advancing Front Methods	591
18.3 Combined DVM and AFM	596
18.4 Three-Dimensional Applications	597
18.4.1 DVM in 3-D	597
18.4.2 AFM in 3-D	598
18.4.3 Curved Surface Grid Generation	599
18.4.4 Example Problems	599
18.5 Other Approaches	600
18.5.1 AFM Modified for Quadrilaterals	601
18.5.2 Iterative Paving Method	603
18.5.3 Quadtree and Octree Method	604
18.6 Summary	605
References	605
19 Adaptive Methods	607
19.1 Structured Adaptive Methods	607

19.1.1	Control Function Methods	607
19.1.1.1	Basic Theory	607
19.1.1.2	Weight Functions in One Dimension	609
19.1.1.3	Weight Function in Multidimensions	611
19.1.2	Variational Methods	612
19.1.2.1	Variational Formulation	612
19.1.2.2	Smoothness Orthogonality and Concentration	613
19.1.3	Multiblock Adaptive Structured Grid Generation	617
19.2	Unstructured Adaptive Methods	617
19.2.1	Mesh Refinement Methods (<i>h</i> -Methods)	618
19.2.1.1	Error Indicators	618
19.2.1.2	Two-Dimensional Quadrilateral Element	620
19.2.1.3	Three-Dimensional Hexahedral Element	624
19.2.2	Mesh Movement Methods (<i>r</i> -Methods)	629
19.2.3	Combined Mesh Refinement and Mesh Movement Methods (<i>hr</i> -Methods)	630
19.2.4	Mesh Enrichment Methods (<i>p</i> -Method)	634
19.2.5	Combined Mesh Refinement and Mesh Enrichment Methods (<i>hp</i> -Methods)	635
19.2.6	Unstructured Finite Difference Mesh Refinements	640
19.3	Summary	642
	References	642
20	Computing Techniques	644
20.1	Domain Decomposition Methods	644
20.1.1	Multiplicative Schwarz Procedure	645
20.1.2	Additive Schwarz Procedure	650
20.2	Multigrid Methods	651
20.2.1	General	651
20.2.2	Multigrid Solution Procedure on Structured Grids	651
20.2.3	Multigrid Solution Procedure on Unstructured Grids	655
20.3	Parallel Processing	656
20.3.1	General	656
20.3.2	Development of Parallel Algorithms	657
20.3.3	Parallel Processing with Domain Decomposition and Multigrid Methods	661
20.3.4	Load Balancing	664
20.4	Example Problems	666
20.4.1	Solution of Poisson Equation with Domain Decomposition Parallel Processing	666
20.4.2	Solution of Navier-Stokes System of Equations with Multithreading	668
20.5	Summary	673
	References	674
PART FIVE. APPLICATIONS		
21	Applications to Turbulence	679
21.1	General	679

21.2	Governing Equations	680
21.3	Turbulence Models	683
21.3.1	Zero-Equation Models	683
21.3.2	One-Equation Models	686
21.3.3	Two-Equation Models	686
21.3.4	Second Order Closure Models (Reynolds Stress Models)	690
21.3.5	Algebraic Reynolds Stress Models	692
21.3.6	Compressibility Effects	693
21.4	Large Eddy Simulation	696
21.4.1	Filtering, Subgrid Scale Stresses, and Energy Spectra	696
21.4.2	The LES Governing Equations for Compressible Flows	699
21.4.3	Subgrid Scale Modeling	699
21.5	Direct Numerical Simulation	703
21.5.1	General	703
21.5.2	Various Approaches to DNS	704
21.6	Solution Methods and Initial and Boundary Conditions	705
21.7	Applications	706
21.7.1	Turbulence Models for Reynolds Averaged Navier-Stokes (RANS)	706
21.7.2	Large Eddy Simulation (LES)	708
21.7.3	Direct Numerical Simulation (DNS) for Compressible Flows	716
21.8	Summary	718
	References	721
22	Applications to Chemically Reactive Flows and Combustion	724
22.1	General	724
22.2	Governing Equations in Reactive Flows	725
22.2.1	Conservation of Mass for Mixture and Chemical Species	725
22.2.2	Conservation of Momentum	729
22.2.3	Conservation of Energy	730
22.2.4	Conservation Form of Navier-Stokes System of Equations in Reactive Flows	732
22.2.5	Two-Phase Reactive Flows (Spray Combustion)	736
22.2.6	Boundary and Initial Conditions	738
22.3	Chemical Equilibrium Computations	740
22.3.1	Solution Methods of Stiff Chemical Equilibrium Equations	740
22.3.2	Applications to Chemical Kinetics Calculations	744
22.4	Chemistry-Turbulence Interaction Models	745
22.4.1	Favre-Averaged Diffusion Flames	745
22.4.2	Probability Density Functions	748
22.4.3	Modeling for Energy and Species Equations in Reactive Flows	753
22.4.4	SGS Combustion Models for LES	754
22.5	Hypersonic Reactive Flows	756
22.5.1	General	756
22.5.2	Vibrational and Electronic Energy in Nonequilibrium	758
22.6	Example Problems	765
22.6.1	Supersonic Inviscid Reactive Flows (Premixed Hydrogen-Air)	765

22.6.2	Turbulent Reactive Flow Analysis with Various RANS Models	770
22.6.3	PDF Models for Turbulent Diffusion Combustion Analysis	775
22.6.4	Spectral Element Method for Spatially Developing Mixing Layer	778
22.6.5	Spray Combustion Analysis with Eulerian-Lagrangian Formulation	778
22.6.6	LES and DNS Analyses for Turbulent Reactive Flows	782
22.6.7	Hypersonic Nonequilibrium Reactive Flows with Vibrational and Electronic Energies	788
22.7	Summary	792
	References	792
23	Applications to Acoustics	796
23.1	Introduction	796
23.2	Pressure Mode Acoustics	798
23.2.1	Basic Equations	798
23.2.2	Kirchhoff's Method with Stationary Surfaces	799
23.2.3	Kirchhoff's Method with Subsonic Surfaces	800
23.2.4	Kirchhoff's Method with Supersonic Surfaces	800
23.3	Vorticity Mode Acoustics	801
23.3.1	Lighthill's Acoustic Analogy	801
23.3.2	Ffowcs Williams-Hawkings Equation	802
23.4	Entropy Mode Acoustics	803
23.4.1	Entropy Energy Governing Equations	803
23.4.2	Entropy Controlled Instability (ECI) Analysis	804
23.4.3	Unstable Entropy Waves	806
23.5	Example Problems	808
23.5.1	Pressure Mode Acoustics	808
23.5.2	Vorticity Mode Acoustics	822
23.5.3	Entropy Mode Acoustics	829
23.6	Summary	837
	References	838
24	Applications to Combined Mode Radiative Heat Transfer	841
24.1	General	841
24.2	Radiative Heat Transfer in Nonparticipating Media	845
24.2.1	Diffuse Interchange in an Enclosure	845
24.2.2	View Factors	848
24.2.3	Radiative Heat Flux and Radiative Transfer Equation	855
24.2.4	Solution Methods for Integrodifferential Radiative Heat Transfer Equation	863
24.3	Radiative Heat Transfer in Participating Media	864
24.3.1	Combined Conduction and Radiation	864
24.3.2	Combined Conduction, Convection, and Radiation	871
24.3.3	Three-Dimensional Radiative Heat Flux Integral Formulation	882
24.4	Example Problems	886
24.4.1	Nonparticipating Media	886
24.4.2	Solution of Radiative Heat Transfer Equation in Nonparticipating Media	888
24.4.3	Participating Media with Conduction and Radiation	892

24.4.4	Participating Media with Conduction, Convection, and Radiation	892
24.4.5	Three-Dimensional Radiative Heat Flux Integration Formulation	896
24.5	Summary	900
