

ETHYLENE

Agricultural Sources and Applications

MUHAMMAD ARSHAD
AND
WILLIAM T. FRANKENBERGER, JR.

CONTENTS

1. THE PLANT HORMONE, ETHYLENE	1
1.1. Introduction	1
1.2. Ethylene as a Gas	2
1.3. Biological Activity of Ethylene	2
1.4. Historical Perspective	3
1.5. Sources of Ethylene and Applications	5
1.6. Future Prospects	6
1.7. References	7
2. ETHYLENE IN PLANT PHYSIOLOGY	11
2.1. Introduction	11
2.2. Endogenous Production of Ethylene	11
2.3. Biosynthetic Pathway	12
2.3.1. Establishment of Methionine as a Physiological Precursor	13
2.3.2. Conversion of Methionine into <i>S</i> -Adenosymethionine (Step I) ...	13
2.3.2.1. Biochemical and Molecular Properties of Methionine Adenotransferase	14
2.3.3. Conversion of <i>S</i> -adenosymethionine Conversion into 1-Aminocyclopropane-1-carboxylic Acid (Step II)	14
2.3.3.1. Biochemical and Molecular Properties of ACC Synthase	16
2.3.4. Conversion of 1-Aminocyclopropane-1-carboxylic Acid into Ethylene (Step III)	18
2.3.4.1. Biochemical and Molecular Properties of ACC Oxidase	20
2.3.5. Conjugation of 1-Aminocyclopropane-1-carboxylic Acid	23
2.3.5.1. ACC <i>N</i> -Malonyltransferase	24
2.3.6. Methionine Cycle	25
2.4. Regulation of Ethylene Production	25
2.5. Metabolism	27
2.6. Mechanism of Action and Ethylene Receptors	28
2.7. Ethylene Production by Lower Plants	36

2.8. Concluding Remarks	38
2.9. References	38
3. BIOCHEMISTRY OF MICROBIAL PRODUCTION OF ETHYLENE ..	51
3.1. Introduction	51
3.2. Substrates/Precursors/Stimulators of Ethylene	51
3.3. Biosynthetic Pathways	56
3.3.1. ACC Deaminase	60
3.4. Methionine-Dependent and -Independent Pathways	64
3.4.1. Methionine-Dependent Pathway	64
3.4.1.1. Biosynthesis of C_2H_4 by <i>Escherichia coli</i>	64
3.4.1.2. Biosynthesis of C_2H_4 by <i>Cryptococcus albidus</i>	66
3.4.1.3. Biosynthesis of C_2H_4 by <i>Septoria musiva</i>	69
3.4.1.4. Summary	70
3.4.2. Methionine-Independent Pathway	70
3.4.2.1. Biosynthesis of C_2H_4 by <i>Penicillium digitatum</i>	70
3.4.2.2. Biosynthesis of C_2H_4 by <i>Pseudomonas syringae</i> pv. <i>phaseolicola</i>	76
3.4.2.3. Biosynthesis of C_2H_4 by Other Fungi	80
3.4.2.4. Summary	81
3.5. Molecular Aspects of the Ethylene-forming Enzyme of <i>Pseudomonas</i> <i>syringae</i>	81
3.6. Structure of Ethylene-forming Enzymes	83
3.7. Microbial Metabolism of Ethylene	85
3.8. Concluding Remarks	90
3.9. References	92
4. FACTORS AFFECTING MICROBIAL PRODUCTION OF ETHYLENE	97
.....	
4.1. Microbial Production of Ethylene	97
4.2. Factors Affecting Microbial Production of Ethylene <i>in Vitro</i>	98
4.2.1. Carbon Sources	104
4.2.2. Nitrogen and Phosphorus	105
4.2.3. pH	116
4.2.4. Aeration	118
4.2.5. Temperature	118
4.2.6. Trace Elements	124
4.2.7. Growth Phase	126
4.3. Effect of Ethylene on Microbial Growth	128
4.3.1. Bacteria	129
4.3.2. Fungi	129
4.3.3. Soil Fungistasis	132
4.4. Concluding Remarks	132
4.5. References	133

5. ETHYLENE IN SOIL	139
5.1. Ethylene Production in Soil	139
5.1.1. Abiotic Production	141
5.1.2. Biotic Production	141
5.1.2.1. Types of Soil Microorganisms Involved	143
5.2. Physicochemical Properties of Soil and Ethylene Production	145
5.2.1. Soil Organic Matter	146
5.2.2. Soil Aeration	147
5.2.3. Soil Reaction	154
5.2.4. Soil Temperature	155
5.2.5. Soil Texture	157
5.2.6. Soil Depth	158
5.3. Organic Amendments and Ethylene Accumulation	158
5.3.1. Organic Amendments with Defined Chemical Composition	158
5.3.2. Organic Amendments without Defined Chemical Composition ..	160
5.4. Inorganic Amendments and Ethylene Accumulation in Soil	164
5.5. Nitrate as a Suppressor of Ethylene Accumulation in Soil	169
5.6. Ferrous Iron as a Stimulator of C ₂ H ₄ Production in Soil	172
5.7. Persistence of Ethylene in Soil	178
5.8. Plant Responses Evoked by Ethylene and Waterlogging	183
5.9. Concluding Remarks	189
5.10. References	189
6. ETHYLENE IN SYMBIOSIS	195
6.1. Introduction	195
6.2. Symbiotic Associations	195
6.3. Nodulation	195
6.3.1. Effects of Exogenous Ethylene on Nodulation	196
6.3.2. Effects of Exogenous Ethylene on <i>Nod</i> Factor(s)	199
6.3.3. Accelerated Ethylene Evolution from <i>Rhizobium</i> -Infected Roots	202
6.3.4. Nitrate and Light-Induced Ethylene Production and Nodulation	206
6.3.5. Ethylene Sensitive and Insensitive Legume Mutants and	
Nodulation	207
6.3.6. Effects of Inhibitors of Ethylene Action or Biosynthesis on	
Nodulation	210
6.3.7. Summary	214
6.4. Mycorrhizal Associations	216
6.4.1. Ethylene Production by Mycosymbiont	217
6.4.2. Ethylene Production by Mycorrhizal Roots	217
6.4.3. Exogenous Ethylene and Mycorrhizae	220
6.4.4. Relationship between <i>in Vitro</i> Ethylene Production and Growth	
Response of Mycorrhizal Plants	222
6.4.5. Summary	227
6.5. Lichen (An Algal-Fungal Symbiosis)	227

6.5.1. Ethylene Production by Lichens	227
6.5.2. Sources of Ethylene	229
6.5.3. Biochemistry of Ethylene Production by Lichens	231
6.5.4. Summary	234
6.6. Concluding Remarks	234
6.7. References	235
7. ETHYLENE IN PATHOGENESIS	241
7.1. Infection: A Biotic Stress	241
7.2. Enhanced Ethylene Production during Pathogenesis	241
7.3. Source of Accelerated Ethylene Evolution during Pathogenesis	249
7.3.1. Contribution by the Pathogen	250
7.3.2. Contribution by the Host	251
7.4. Role of Ethylene in Disease Development	254
7.4.1. Effect of Exogenous Ethylene	255
7.4.2. Ethylene Production and Virulence	256
7.4.3. Ethylene Production and Development of Disease Symptoms	258
7.4.4. Ethylene and Toxins Produced by Pathogens	260
7.4.5. Ethylene Mutants	261
7.5. Role of Ethylene in Disease Resistance	262
7.5.1. Induction of Pathogenesis Related (PR) Proteins and Enzymes ...	264
7.5.1.1. Chitinases and β -1,3-Glucanases	265
7.5.1.2. Phenylalanine Ammonia-Lyase	267
7.5.1.3. Ethylene Biosynthesis-Inducing Xylanase	268
7.5.1.4. Others	268
7.5.2. Induction of Phytoalexins and Antibiotics	269
7.5.3. Induction of Structural and Development Changes	270
7.5.4. Summary	271
7.6. Soil Ethylene as a Weedicide	272
7.7. Concluding Remarks	273
7.8. References	275
8. ETHYLENE IN AGRICULTURE: SYNTHETIC AND NATURAL SOURCES AND APPLICATIONS	289
8.1. Introduction	289
8.2. Ethylene Sources and Their Applications in Agriculture	290
8.2.1. Ethylene Gas	290
8.2.2. Ethylene-Releasing Compounds	291
8.2.3. Ethephon and Its Applications	292
8.2.4. Retprol and Its Applications	301
8.2.5. Soil Ethylene and Its Ecological Significance	305
8.3. Alterations in Endogenous Ethylene Biosynthesis and Plant Responses ..	315
8.3.1. Transgenic Plants with ACC Oxidase ACC Synthase Antisense	315
8.3.2. Transgenic Plants with Bacterial Ethylene-Forming Enzymes	317

CONTENTS	xi
8.3.3. Transgenic Plants with Bacterial ACC-Deaminase	318
8.3.4. Inoculation with ACC-Deaminase Containing Plant Growth- Promoting Rhizobacteria	322
8.4. Concluding Remarks	324
8.5. References	327
INDEX	337
