

SECOND EDITION

# THE PHYSICS AND CHEMISTRY OF COLOR

The Fifteen Causes of Color

---

KURT NASSAU

Wiley Series in Pure and Applied Optics

# Contents

<b>Preface to the Second Edition</b>	<b>xiii</b>
<b>Preface to the First Edition</b>	<b>xvii</b>
<b>Acknowledgments for the Second Edition</b>	<b>xix</b>
<b>Acknowledgments for the First Edition</b>	<b>xx</b>
<b>PART I LIGHT AND COLOR</b>	<b>1</b>
<b>Chapter 1. Some Fundamentals: Color, Light, and Interactions</b>	<b>3</b>
Color	3
Early Views of Color	4
The Spectrum and "Colored" Light	5
Elementary Color Mixing	8
Chromaticity and Additive Color Mixing	9
Colored Objects and Subtractive Color Mixing	14
Color Order Systems	19
Color Perception	20
The Nature of Light	23
Light and Energy	26
Interactions of Light with Bulk Matter	27
Interactions of Light with Molecules, Atoms, and Electrons	29
Problems	31
<b>PART II COLOR INVOLVING VIBRATIONS AND SIMPLE EXCITATIONS</b>	<b>35</b>
<b>Chapter 2. Color Produced by Incandescence</b>	<b>37</b>
Incandescence	37
Blackbody Radiation	40
Incandescent Light Sources	41
Pyrotechnics	45
Cerenkov Radiation	45
Nature of Incandescent Light	46
Summary	47
Problems	47

<b>Chapter 3. Color produced by Gas Excitations</b>	<b>49</b>
Quanta and Excitations	49
Flame Colorations	52
Neon Signs	53
Vapor Discharge Lamps	55
Fraunhofer Lines, Red Shifts, Resonance, and Fluorescence	57
Arcs, Lightning, and Coronas	60
Auroras	61
Gas Lasers	62
Summary	67
Problems	67
 <b>Chapter 4. Color Produced by Vibrations and Rotations</b>	 <b>69</b>
Combination Electronic–Vibration–Rotation Colors	69
Fluorescence and Phosphorescence	73
Vibrations in Water and Ice	74
Summary	78
Problems	79
 <b>PART III COLOR INVOLVING LIGAND FIELD EFFECTS</b>	 <b>81</b>
 <b>Chapter 5. Color Caused by Transition Metals in a Ligand Field</b>	 <b>83</b>
Ionic and Covalent Bonding	83
Bonding in Corundum	84
Chromium and the Color of Ruby	86
Luminescence and Pleochroism in Ruby	89
Chromium in Emerald	91
Alexandrite Effect	93
Usambara Effect in Tourmaline	94
Some Ligand Field Considerations	97
Idiochromatic Transition Metal Colors	102
Allochromatic Transition Metal Colors	104
Ruby and Neodymium Lasers	106
Summary	109
Problems	109
 <b>PART IV COLOR INVOLVING MOLECULAR ORBITALS</b>	 <b>111</b>
 <b>Chapter 6. Color in Organic Molecules</b>	 <b>113</b>
Early Views of Organic Color	113

Molecular Orbitals of Formaldehyde	117
Polyene Colorants	120
Green Colorants	127
Donor-Acceptor Colorants	129
Usambara Effect in Plastics	135
Fluorescence, Phosphorescence, and Organic Dye Lasers	136
Organic Light-Emitting Diodes	140
Summary	141
Problems	142
 <b>Chapter 7. Charge Transfer Color</b>	 <b>143</b>
Blue Sapphire	143
Intervalence Charge Transfer	146
Other Types of Charge Transfer	148
Summary	152
Problems	153
 <b>PART V COLOR INVOLVING BAND THEORY</b>	 <b>155</b>
 <b>Chapter 8. Color in Metals and Semiconductors</b>	 <b>157</b>
Band Theory	157
Color of Metals and Alloys	162
Transparent Metals	167
Other Substances with a Metal-Like Appearance	169
Pure Insulator and Semiconductor Colors	170
Semiconductor Color Caused by Impurities	173
LEDs and Semiconductor Lasers	178
Quantum Confinement in Semiconductors	182
Summary	184
Problems	185
 <b>Chapter 9. Color Centers</b>	 <b>187</b>
F Centers	187
Smoky Quartz and Amethyst	192
Electron and Hole Centers	194
Irradiation Sources	198
Specific Color Centers	198
Color Center-Like Color Changes	203
Summary	203
Problems	204

<b>PART VI COLOR INVOLVING GEOMETRICAL AND PHYSICAL OPTICS</b>	<b>205</b>
<b>Chapter 10. Dispersive Refraction and Polarization</b>	<b>207</b>
Dispersive Refraction	207
Transparency	212
Anomalous Dispersion	213
Dispersion-Produced Color	214
Double Refraction and Polarized Light	226
Summary	229
Problems	229
<b>Chapter 11. Scattering and Nonlinear Effects</b>	<b>231</b>
Rayleigh and Mie Scattering	231
Scattering-Produced Color	235
Nonlinear Effects	241
Summary	246
Problems	246
<b>Chapter 12. Interference and Diffraction</b>	<b>247</b>
Interference of Two Beams	247
Interference in a Thin Film	250
Interferometers and Interference Filters	253
Other Occurrences of Interference Not Involving Diffraction	258
Diffraction	264
Diffraction Gratings	269
Cholesteric Liquid Crystal Layer Gratings	275
Summary	276
Problems	276
<b>PART VII COLOR-RELATED TOPICS</b>	<b>279</b>
<b>Chapter 13. Colorants of Many Types</b>	<b>281</b>
Colorants	281
Pigments	284
Pigment Incompatibilities and Paint Deterioration	288
Dyes, Dyeing, and Staining	290
Sensitizers and Dyes for Photography	295
Bleaching and Fading	301
Color in Glass, Glazes, and Enamels	302
Color Filters and Mirrors	308
Color in Liquid Crystals	311
Biological Coloration	317

Medical Uses of Light and Color	325
Color Changes in Food	328
Color Seen in the Atmosphere	329
Color in Minerals and Gemstones	330
Problems	335
 <b>Chapter 14. Vision, Luminescence, Lasers, and Related Topics</b>	 <b>337</b>
Human Vision	337
Human Color Vision	344
Color Vision Defects	346
Color Vision in Animals	349
Photosynthesis	353
Chromogenic Effects	354
Photochemistry and Art Preservation	356
Light Sources	360
Luminescence	364
Chemiluminescence and Bioluminescence	368
Color Television and Computer Displays	371
Digital and Flat-Panel Displays	373
Lasers	376
Holography	381
Problems	382
 <b>APPENDICES</b>	 <b>385</b>
 <b>Appendix A. Units, Chromaticity, and Color Order Systems</b>	 <b>387</b>
Units for Color	387
Definitions	387
<i>Energy Units and Their Conversions</i>	387
Conversion Between eV and nm	389
Photometric Units	389
Absorption Laws	390
Attenuation	391
CIE Standard Observer and Tristimulus Values	392
Chromaticity	392
Color Order Systems	395
Advanced Colorimetry	396
Color Difference Assessment	398
Color-Measuring Instruments	399
Color Wheels	401

<b>Appendix B. Incandescence Equations</b>	<b>402</b>
<b>Appendix C. Atoms and Simple Molecules</b>	<b>405</b>
Shells and Orbitals	405
Term Symbols and Selection Rules	410
Shapes of Orbitals	411
Hydrogen Molecule	412
Other Simple Molecules	416
Molecular Term Symbols	418
Diatomic Molecule Vibrations	419
Fluorescence and Phosphorescence	422
Two Triatomic Molecules	423
<b>Appendix D. Crystal Fields, Ligand Fields, and Molecular Orbitals</b>	<b>427</b>
Crystal Field Theory	427
Ligand Field Theory and Molecular Orbital Theory	430
Orbital Diagrams	431
<b>Appendix E. Band Theory</b>	<b>435</b>
Free Electron Model	435
Fermi Energy	437
Nearly Free Electron Model	439
<b>Appendix F. Prism, Thin Film, and Layer Diffraction Grating</b>	<b>441</b>
Minimum Deviation of a Prism	441
Resolving Power of a Prism	443
Interference in a Thin Film	444
Newton's Colors	444
Diffraction from a Layer Grating	446
<b>Appendix G. Recommendations for Additional Reading</b>	<b>448</b>
<b>Index</b>	<b>463</b>
